Gpr132 Cas9-CKO Strategy

Designer: Design Date: Huan Fan 2019-10-8

Project Overview

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Gpr132* gene. The schematic diagram is as follows:

江苏集萃药康生物科技股份有限公司

GemPharmatech Co., Ltd.

- The Gpr132 gene has 2 transcripts. According to the structure of Gpr132 gene, exon3 of Gpr132-201 transcript is recommended as the knockout region. The region contains most of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Gpr132* gene. The brief process is as follows: gRNA was transcribed in vitro, donor was constructed.Cas9, gRNA and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues or cell types.

- According to the existing MGI data, Mice homozygous for disruptions in this gene display a generally normal phenotype but eventually develop a "late onset lymphoproliferative autoimmune syndrome".
- The *Gpr132* gene is located on the Chr12. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gpr132 G protein-coupled receptor 132 [Mus musculus (house mouse)]

Gene ID: 56696, updated on 12-Aug-2019

Summary

Official Symbol Gpr132 provided by MGI Official Full Name G protein-coupled receptor 132 provided by MGI

Primary source MGI:MGI:1890220

See related Ensembl:ENSMUSG0000021298

Gene type protein coding

RefSeq status PROVISIONAL

Organism Mus musculus

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as G2a

Expression Biased expression in thymus adult (RPKM 78.1), spleen adult (RPKM 34.3) and 2 other tissues See more

Orthologs human all

Mouse phenotype description(MGI)

Click cells to view annotations.

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, Mutations in this locus affect cell-cycle regulation and apoptos is. Null homozygotes show high, early-onset tumor incidence; some have persistent hyaloid vasculature and cataracts. Truncated or temperature-sensitive alleles cause early aging phenotypes.
