Project Overview

Project Name

Humanized KITLG-PolyA

Project type

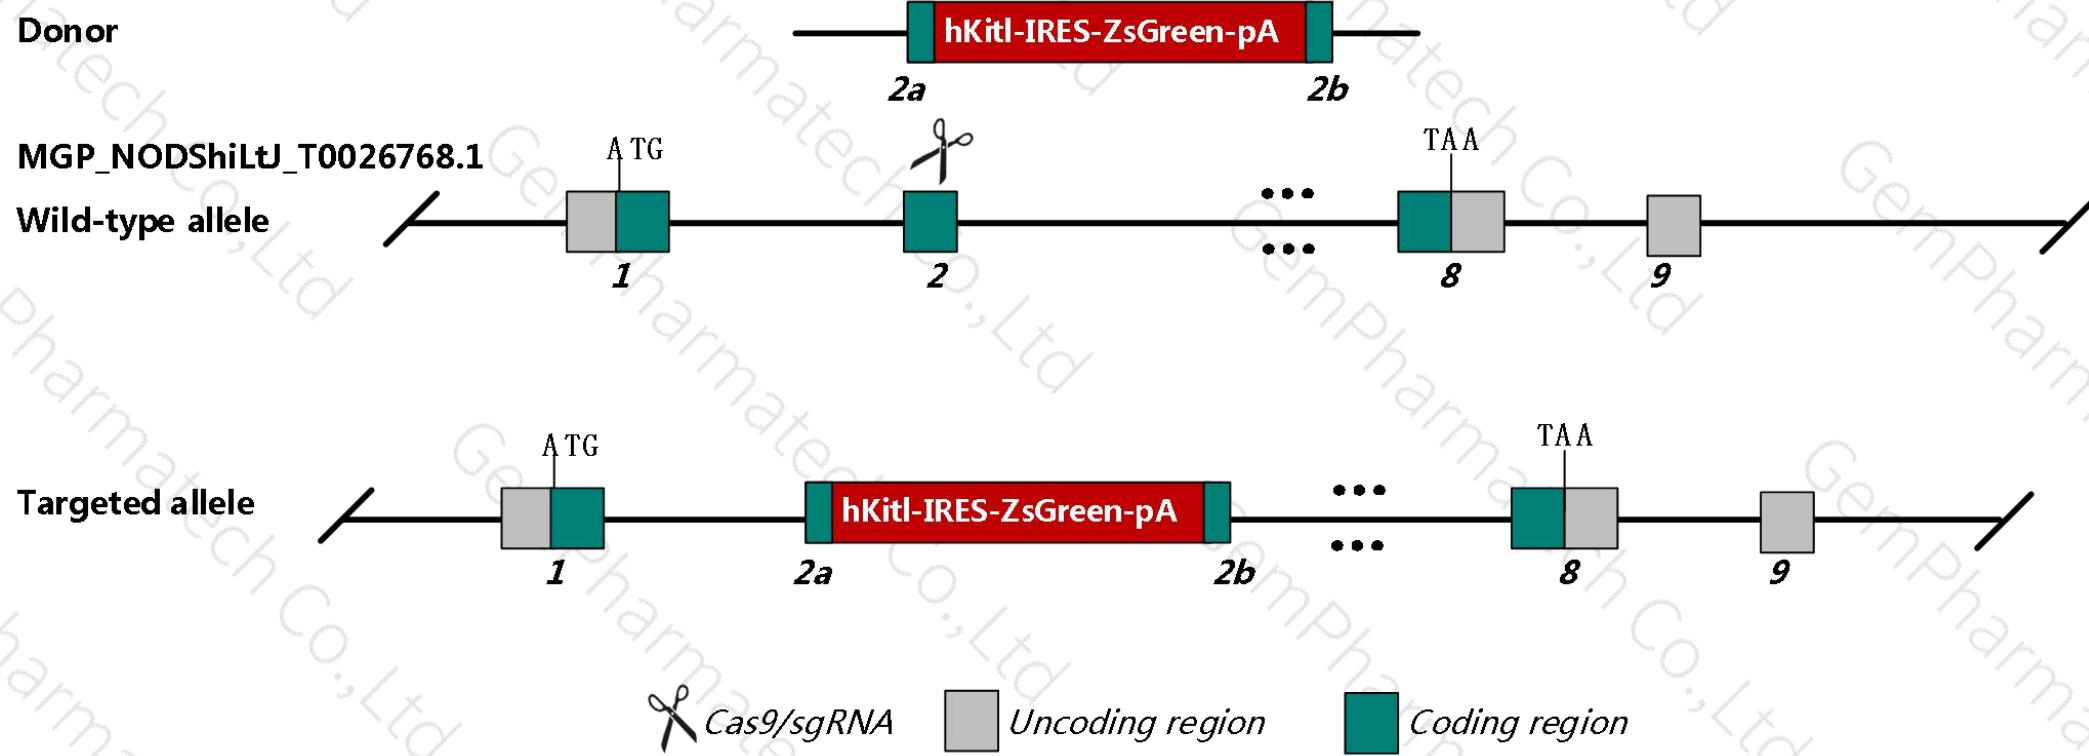

Cas9-KI

Strain background

NODShiLtJ

Knockin strategy

This model will use CRISPR/Cas9 technology to edit the *Kitl* gene. The schematic diagram is as follows:

Technical routes

- The *Kitl* gene has 3 transcripts. According to the structure of *Kitl* gene, *MGP_NODShiLtJ_T0026766.1* is selected for presentation of the recommended strategy.
- *MGP_NODShiLtJ_T0026766.1* gene has 11 exons, with the ATG start codon in exon1 and TAA stop codon in exon9.
- We make *Humanized KITLG-PolyA* knockin mice via CRISPR/Cas9 system. Cas9 mRNA, sgRNA and donor will be co-injected into zygotes. sgRNA direct Cas9 endonuclease cleavage near exon2 of *Kitl* gene, and create a DSB(double-strand break). Such breaks will be repaired, and result in *Humanized KITLG-PolyA* into exon2 of *Kitl* gene by homologous recombination. The pups will be genotyped by PCR, followed by sequence analysis.

Notice

- According to available data (MGI), Mutations in this gene affect migration of embryonic stem cells and cause similar phenotypes to mutations in its receptor gene (Kit). Mutants show mild to severe defects in pigmentation, hemopoiesis and reproduction.
- The Kitl gene is located on the 10# chromosome. If this gene is knocked into mice and matched with other mouse strains, please avoid the two genes on the same chromosome, otherwise the offspring of the double-gene homozygous positive will not be obtained.
- After humanization of the KITLG gene, the function of the mouse gene may be lost, resulting in the result of the gene KO.
- The scheme is designed according to the genetic information in the existing database. Due to the complex process of gene transcription and translation, it cannot be predicted completely at the present technology level.

Gene information (NCBI)

Kitl kit ligand [*Mus musculus* (house mouse)]

Gene ID: 17311, updated on 12-Aug-2019

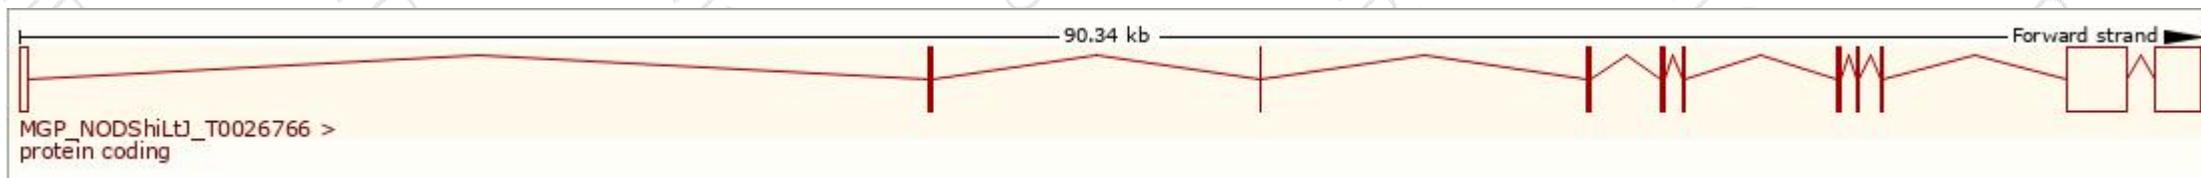

Summary	
Official Symbol	Kitl provided by MGI
Official Full Name	kit ligand provided by MGI
Primary source	MGI:MGI:96974
See related	Ensembl:ENSMUSG00000019966
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	Gb; SF; Sl; Clo; Con; Mgf; SCF; SLF; blz; Kitlg; contrasted
Expression	Ubiquitous expression in lung adult (RPKM 2.7), CNS E18 (RPKM 2.6) and 27 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

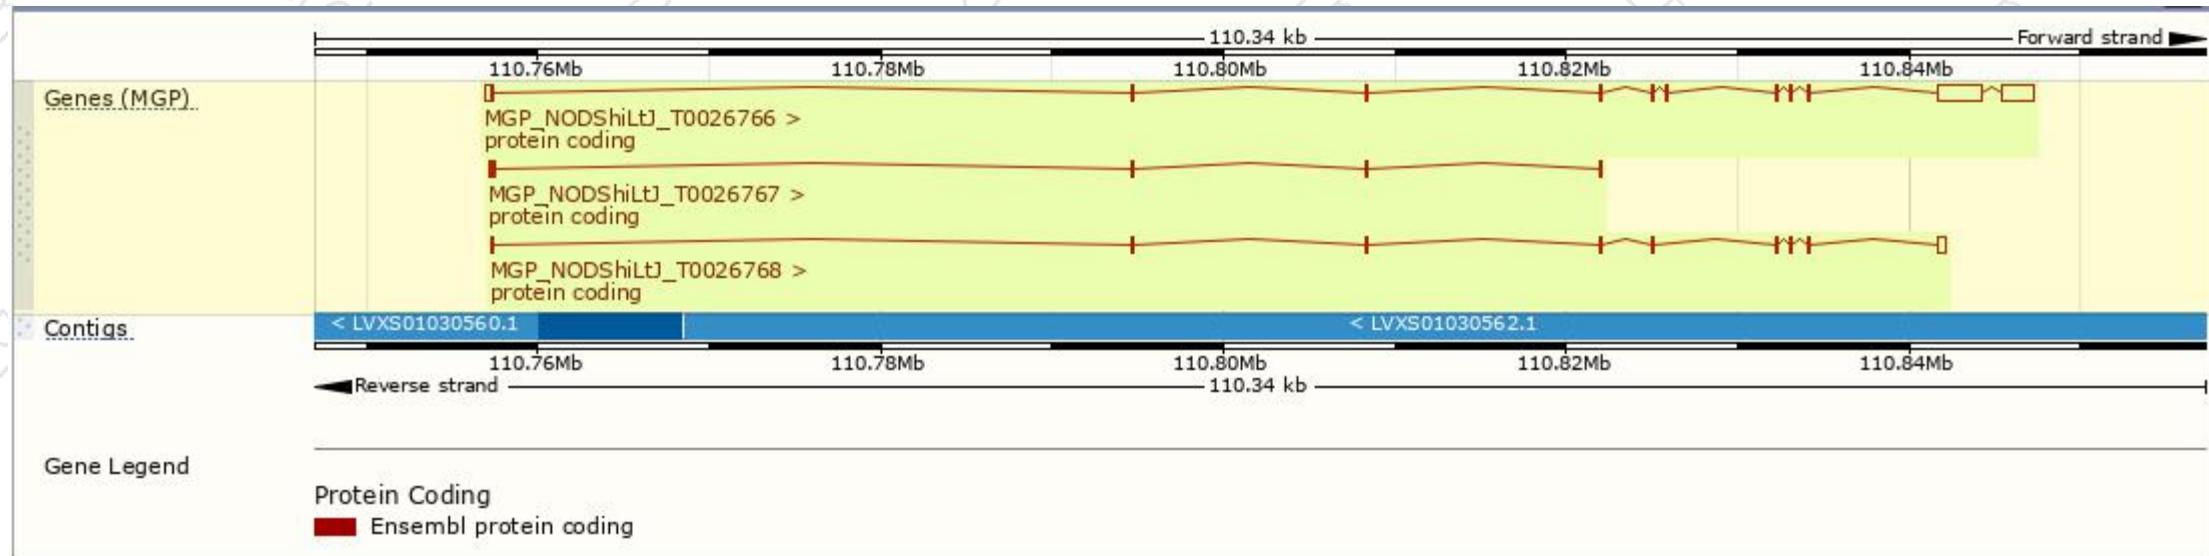

The gene has 3 transcripts, and all transcripts are shown below :

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
-	MGP_NODShiLtJ_T0026766.1	5642	273aa	Protein coding	CCDS36046	P20826 Q8C9K1	-
-	MGP_NODShiLtJ_T0026768.1	1260	245aa	Protein coding	-	-	-
-	MGP_NODShiLtJ_T0026767.1	675	160aa	Protein coding	-	-	-

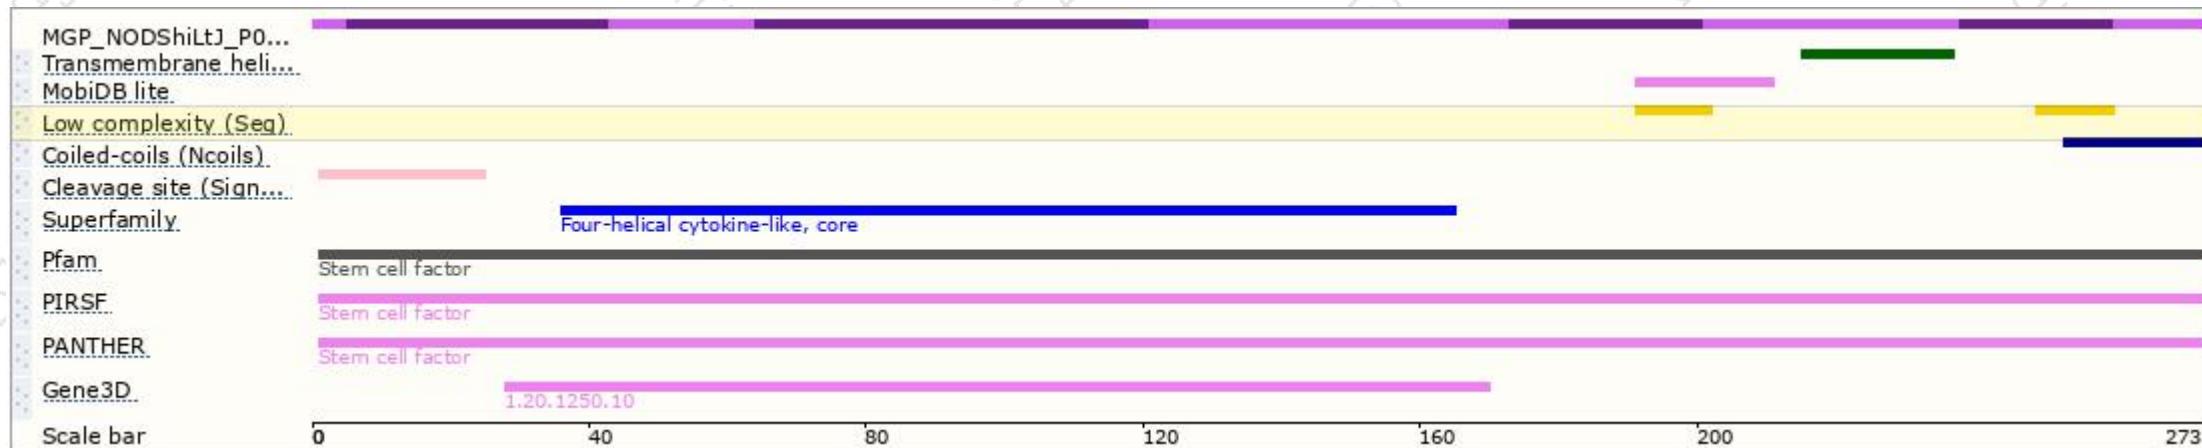

The strategy is based on the design of *MGP_NODShiLtJ_T0026766.1* transcript, The transcription is shown

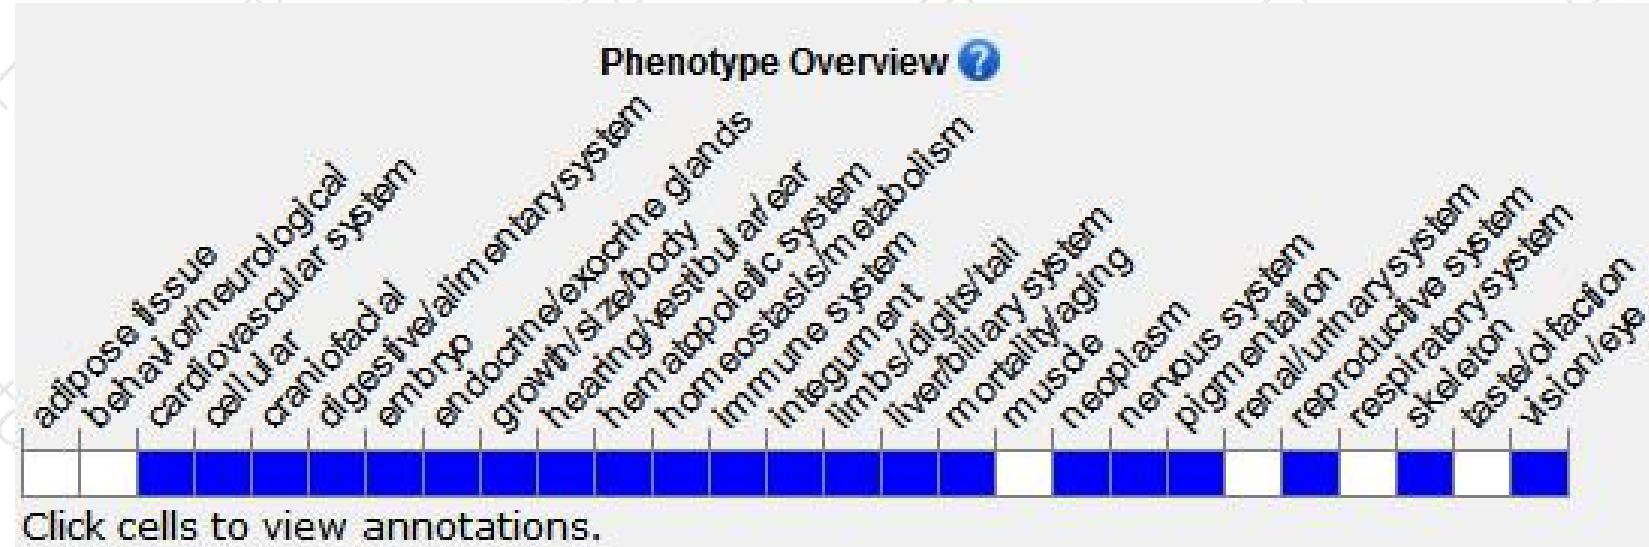

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org>) .

Mutations in this gene affect migration of embryonic stem cells and cause similar phenotypes to mutations in its receptor gene (Kit). Mutants show mild to severe defects in pigmentation, hemopoiesis and reproduction.

Gene information (NCBI)

KITLG KIT ligand [*Homo sapiens* (human)]

Gene ID: 4254, updated on 7-Jul-2019

Summary

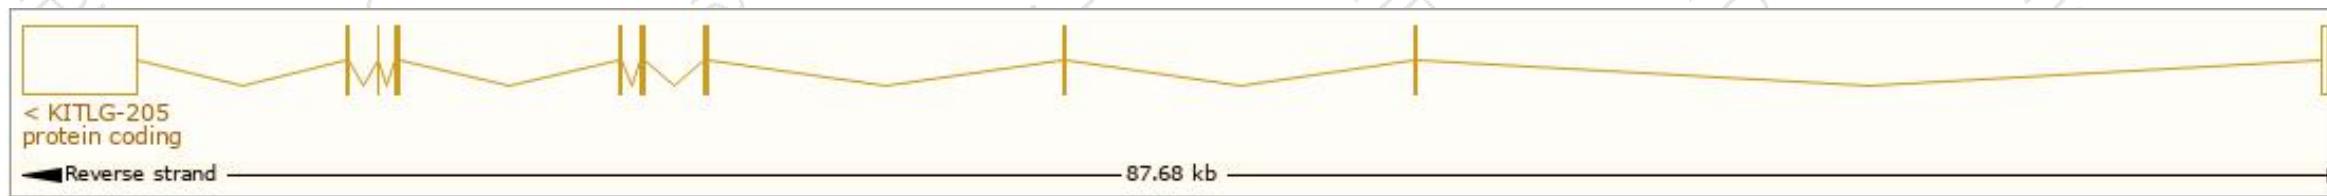

Official Symbol	KITLG provided by HGNC
Official Full Name	KIT ligand provided by HGNC
Primary source	HGNC : HGNC-6343
See related	Ensembl : ENSG00000049130 MIM : 184745
Gene type	protein coding
RefSeq status	REVIEWED
Organism	Homo sapiens
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Haplorrhini; Catarrhini; Hominidae; Homo
Also known as	SF; MGF; SCF; SLF; DCUA; FPH2; FPHH; KL-1; Kitl; SHEP7; DFNA69
Summary	This gene encodes the ligand of the tyrosine-kinase receptor encoded by the KIT locus. This ligand is a pleiotropic factor that acts in utero in germ cell and neural cell development, and hematopoiesis, all believed to reflect a role in cell migration. In adults, it functions pleiotropically, while mostly noted for its continued requirement in hematopoiesis. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
Expression	Broad expression in lung (RPKM 24.5), colon (RPKM 14.0) and 22 other tissues See more
Orthologs	mouse all

Transcript information (Ensembl)

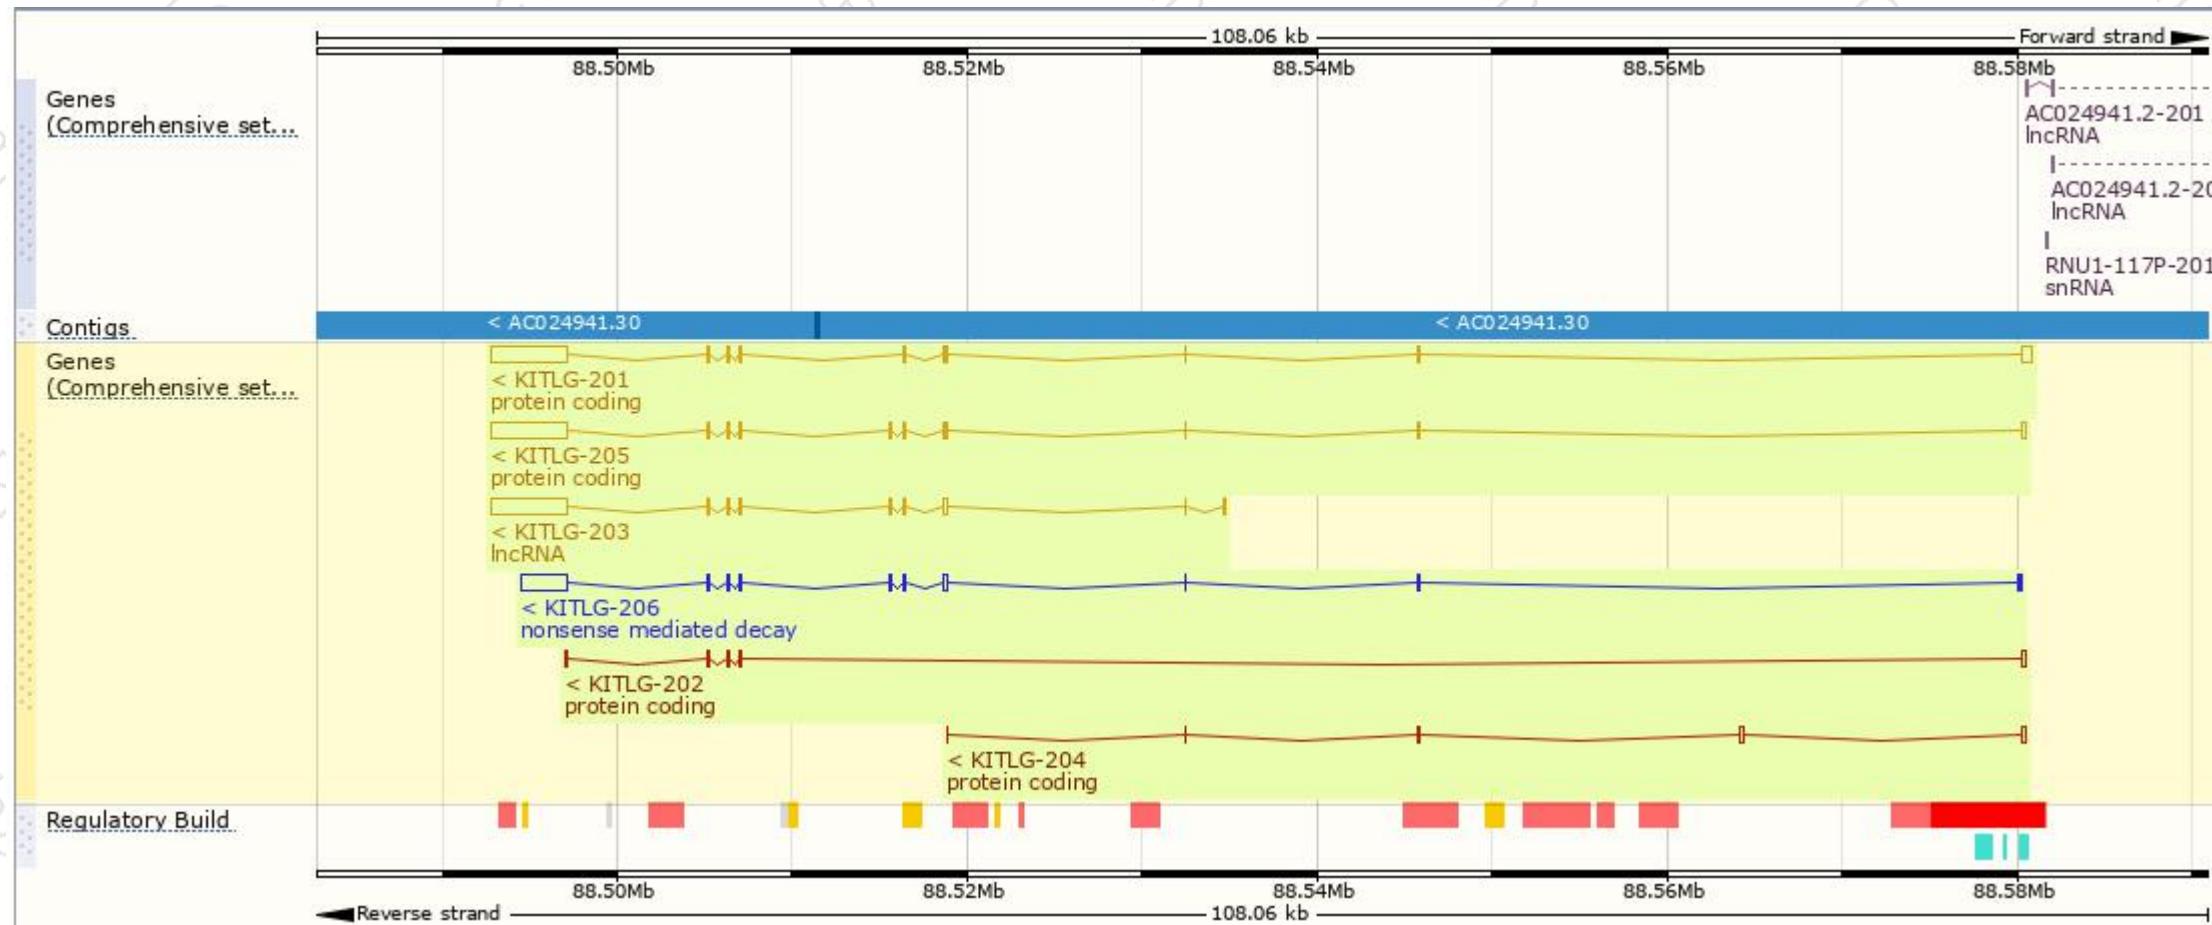

The gene has 6 transcripts, and all transcripts are shown below :

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	RefSeq Match	Flags
KITLG-201	ENST00000347404.10	5737	245aa	Protein coding	CCDS31867	A0A024RBF5	P21583	-

Kitl protein has both secreted form and transmembrane protein form. For this model, we need to secrete the form of protein, so we have a humanized strategy choice: 1-25aa using Mouse sequence (included in exon1-2), 26 -273aa replaced with Human 26-273aa

If you have any questions, you are welcome to inquire.
