**C57BL/6JGpt**

---

# Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Oprm1* gene. The schematic diagram is as follows:

# Technical routes

- The *Oprm1* gene has 31 transcripts. According to the structure of *Oprm1* gene, exon2-exon3 of *Oprm1-216* (ENSMUST00000105611.7) transcript is recommended as the knockout region. The region contains 874bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Oprm1* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

# Notice

- According to the existing MGI data, Homozygotes for null mutations exhibit isoform dependent loss of behavioral and gastrointestinal opioid responses and may also show impaired spatial memory, heightened nociception, reduced locomotor activity, increased hematopoietic proliferation, and decreased male fertility.
- The *Oprm1* gene is located on the Chr10. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

# Gene information (NCBI)

## Oprm1 opioid receptor, mu 1 [Mus musculus (house mouse)]

Gene ID: 18390, updated on 19-Mar-2019

### Summary

<b>Official Symbol</b>	Oprm1 provided by <a href="#">MGI</a>
<b>Official Full Name</b>	opioid receptor, mu 1 provided by <a href="#">MGI</a>
<b>Primary source</b>	<a href="#">MGI</a> : <a href="#">MGI</a> :97441
<b>See related</b>	<a href="#">Ensembl</a> : <a href="#">ENSMUSG000000000766</a>
<b>Gene type</b>	protein coding
<b>RefSeq status</b>	REVIEWED
<b>Organism</b>	<a href="#">Mus musculus</a>
<b>Lineage</b>	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
<b>Also known as</b>	M-OR-1, MOP-R, MOR-1, MOR-1O, Oprm, mor, muOR
<b>Summary</b>	This gene encodes the mu opioid receptor which is where drugs such as morphine and other opioids have pharmacological effects. Several alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Nov 2014]
<b>Expression</b>	Low expression observed in reference dataset <a href="#">See more</a>
<b>Orthologs</b>	<a href="#">human</a> all

# Transcript information (Ensembl)

The gene has 31 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
