Knockout strategy

400-9660890

This model will use CRISPR/Cas9 technology to edit the Mctp1 gene. The schematic diagram is as follows:

江苏集萃药康生物科技股份有限公司

GemPharmatech Co., Ltd.

➤ The *Mctp1* gene has 8 transcripts. According to the structure of *Mctp1* gene, exon3 of *Mctp1*-201(ENSMUST00000109583.9) transcript is recommended as the knockout region. The region contains 143bp coding sequence. Knock out the region will result in disruption of protein function.

In this project we use CRISPR/Cas9 technology to modify *Mctp1* gene. The brief process is as follows: CRISPR/Cas9 system were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

According to the existing MGI data,homozygous null mice have normal hearing and inner ear structures. Mice homozygous for a spontaneous deletion that encompasses a cis-regulatory region crucial for Nr2f1 expression show circling, fused saccule and utricle, hearing loss, inner ear dysmorphology and disorganized cochlear hair cells.
The *Mctp1* gene is located on the Chr13. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
This strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes,all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gene information (NCBI)

Mctp1 multiple C2 domains, transmembrane 1 [Mus musculus (house mouse)]

Gene ID: 78771, updated on 17-Feb-2021

Summary

Official Symbol	Mctp1 provided by MGI
Official Full Name	multiple C2 domains, transmembrane 1 provided by MGI
Primary source	MGI:MGI:1926021
See related	Ensembl:ENSMUSG0000021596
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia;
	Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	2810465F10Rik
Expression	Biased expression in cerebellum adult (RPKM 5.3), ovary adult (RPKM 4.5) and 9 other tissuesSee more
Orthologs	human all

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, homozygous null mice have normal hearing and inner ear structures. Mice homozygous for a spontaneous deletion that encompasses a cis-regulatory region crucial for Nr2f1 expression show circling, fused saccule and utricle, hearing loss, inner ear dysmorphology and disorganized cochlear hair cells.
