### **Knockout strategy**

This model will use CRISPR/Cas9 technology to edit the Med9 gene. The schematic diagram is as follows:

> The *Med9* gene has 1 transcript. According to the structure of *Med9* gene, exon1 of *Med9-201*(ENSMUST00000081980.7) transcript is recommended as the knockout region. The region contains start codon ATG.Knock out the region will result in disruption of protein function.

➤ In this project we use CRISPR/Cas9 technology to modify *Med9* gene. The brief process is as follows: CRISPR/Cas9 system were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- ➤ *Med9os* lncRNA will be deleted.
- > The *Med9* gene is located on the Chr11. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- > This strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes,all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

# **Gene information (NCBI)**

### Med9 mediator complex subunit 9 [Mus musculus (house mouse)]

Gene ID: 192191, updated on 8-Nov-2020

#### Summary

<b>Official Symbol</b>	Med9 provided by MGI
<b>Official Full Name</b>	mediator complex subunit 9 provided by <u>MGI</u>
Primary source	MGI:MGI:2183151
See related	Ensembl:ENSMUSG0000061650
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia;
	Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	BC019367, Med25
Expression	Ubiquitous expression in testis adult (RPKM 21.0), adrenal adult (RPKM 15.3) and 28 other tissuesSee more
Orthologs	human all

\$ ?

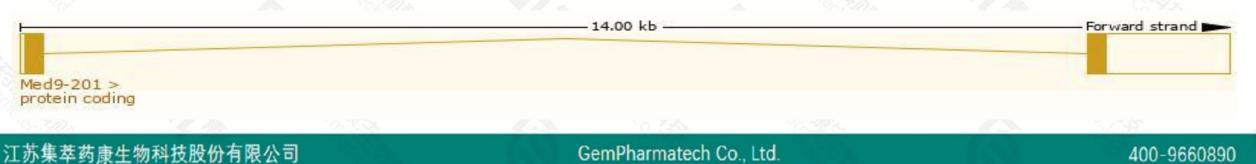

### **Transcript information (Ensembl)**

The gene has 1 transcript, and the transcript is shown below:

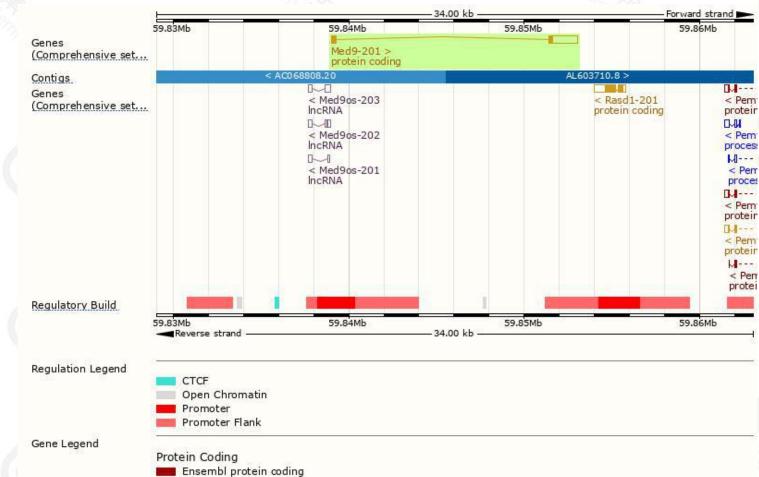

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags	17
Med9-201	ENSMUST0000081980.7	1920	<u>142aa</u>	Protein coding	CCDS24780		TSL:1, GENCODE basic, APPRIS P1,	$\mathbb{N}$

The strategy is based on the design of *Med9-201* transcript, the transcription is shown below:

### **Genomic location distribution**

- 🛑 merged Ensembl/Havana
- Non-Protein Coding processed transcript RNA gene
