

Nkx3-2 Cas9-KO Strategy

Designer: Longyun Hu

Reviewer: Yun Li

Design Date: 2020/8/20

Project Overview

Project Name

Nkx3-2

Project type

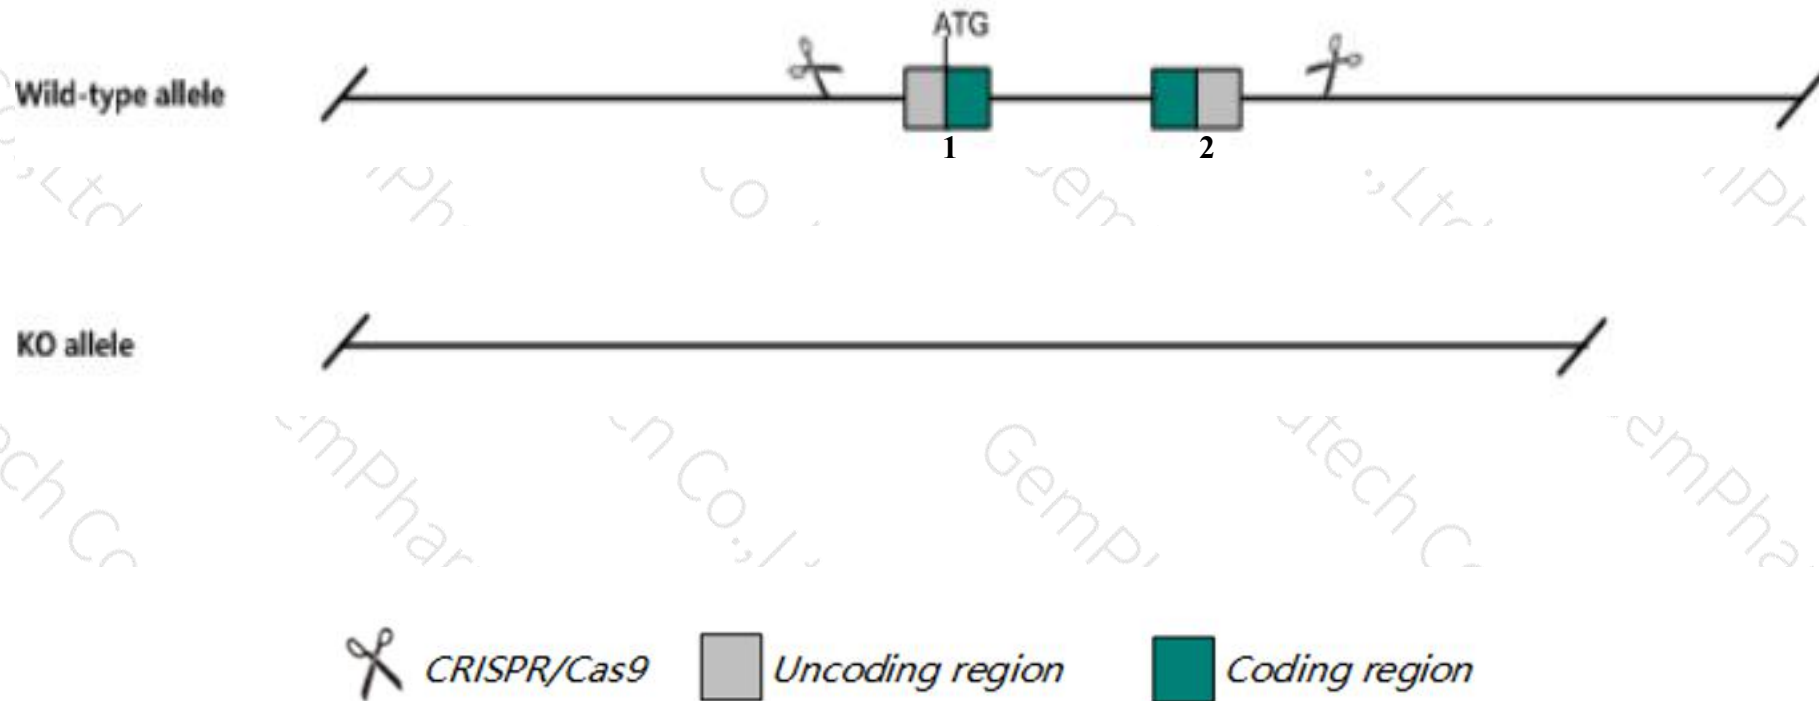

Cas9-KO

Strain background

C57BL/6JGpt

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Nkx3-2* gene. The schematic diagram is as follows:

- The *Nkx3-2* gene has 1 transcript. According to the structure of *Nkx3-2* gene, exon1-exon2 of *Nkx3-2-201*(ENSMUST00000060820.7) transcript is recommended as the knockout region. The region contains all of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Nkx3-2* gene. The brief process is as follows: CRISPR/Cas9 system were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- According to the existing MGI data, homozygous null mutants are perinatal lethal, lack a spleen, and display skeletal dysplasia of the vertebral column and cranium.
- The *Nkx3-2* gene is located on the Chr5. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gene information (NCBI)

Nkx3-2 NK3 homeobox 2 [Mus musculus (house mouse)]

Gene ID: 12020, updated on 13-Mar-2020

Summary

Official Symbol	Nkx3-2 provided by MGI
Official Full Name	NK3 homeobox 2 provided by MGI
Primary source	MGI:MGI:108015
See related	Ensembl:ENSMUSG00000049691
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	Bapx1, NKX3.2, Nkx-3.2
Expression	Biased expression in colon adult (RPKM 7.5), limb E14.5 (RPKM 5.4) and 6 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

The gene has 1 transcript, and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Nkx3-2-201	ENSMUST00000060820.7	1718	333aa	Protein coding	CCDS19259	P97503	TSL:1 GENCODE basic APPRIS P1

The strategy is based on the design of *Nkx3-2-201* transcript, the transcription is shown below:

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, homozygous null mutants are perinatal lethal, lack a spleen, and display skeletal dysplasia of the vertebral column and cranium.
