Cd79a Cas9-CKO Strategy

Designer: Huan Fan

Reviewer: Huan Wang

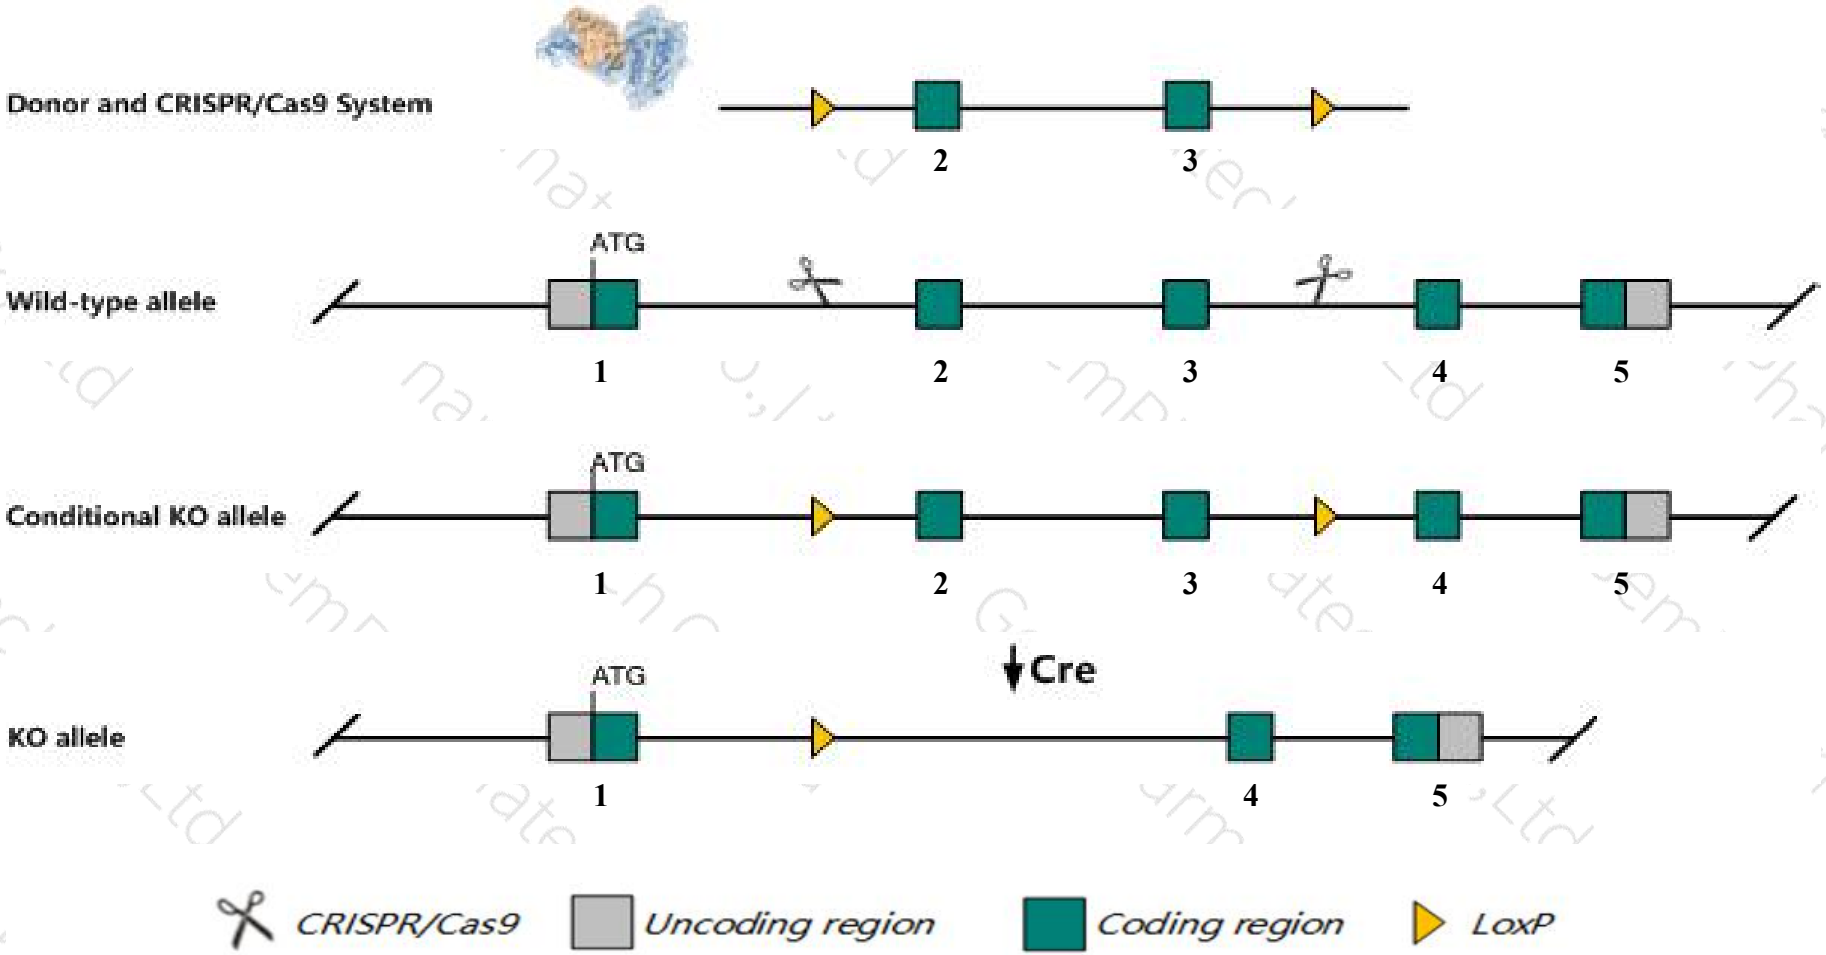
Design Date: 2020-4-16

Project Overview

Project Name	***Cd79a***
Project type	**Cas9-CKO**
Strain background	**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Cd79a* gene. The schematic diagram is as follows:



Technical routes

- The *Cd79a* gene has 1 transcript. According to the structure of *Cd79a* gene, exon2-exon3 of *Cd79a-201* (ENSMUST00000003469.7) transcript is recommended as the knockout region.The region contains 413bp coding sequence. Knock out the region will result in disruption of protein function.

- In this project we use CRISPR/Cas9 technology to modify *Cd79a* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data,homozygotes for targeted null mutations exhibit arrested development of b cells at the pro-b cell stage due to diminished signaling of the b cell receptor.
- The KO region is 3kb away from *Arhgef1* gene, so *Arhgef1* gene may be affected.
- The *Cd79a* gene is located on the Chr7. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Cd79a CD79A antigen (immunoglobulin-associated alpha) [Mus musculus (house mouse)]

Gene ID: 12518, updated on 13-Mar-2020

Summary

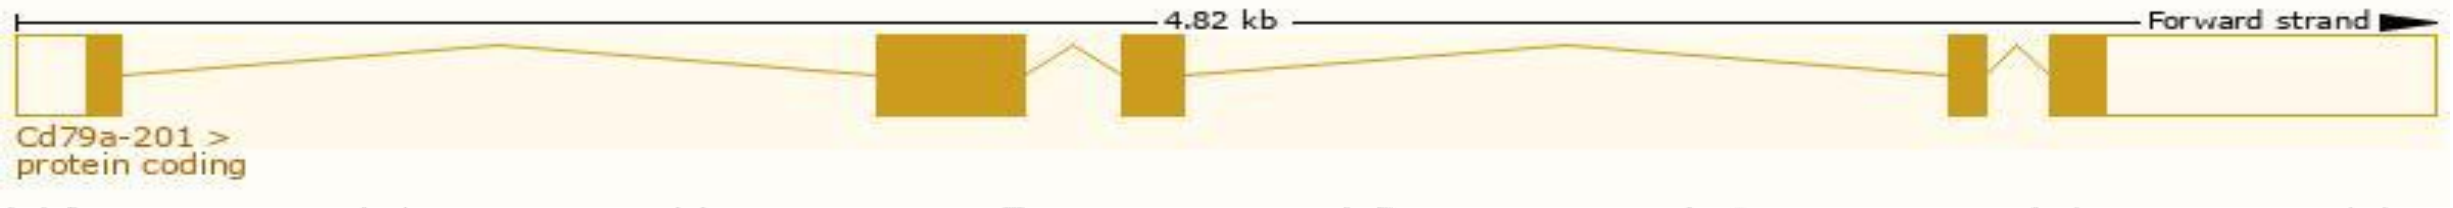
Official Symbol	Cd79a provided by MGI
Official Full Name	CD79A antigen (immunoglobulin-associated alpha) provided by MGI
Primary source	MGI:MGI:101774
See related	Ensembl:ENSMUSG00000003379
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	Ig-alpha, Iga, Igalpha, Ly-54, Ly54, mb-1
Expression	Biased expression in spleen adult (RPKM 536.2), mammary gland adult (RPKM 128.1) and 1 other tissue See more
Orthologs	human all

Transcript information（Ensembl）

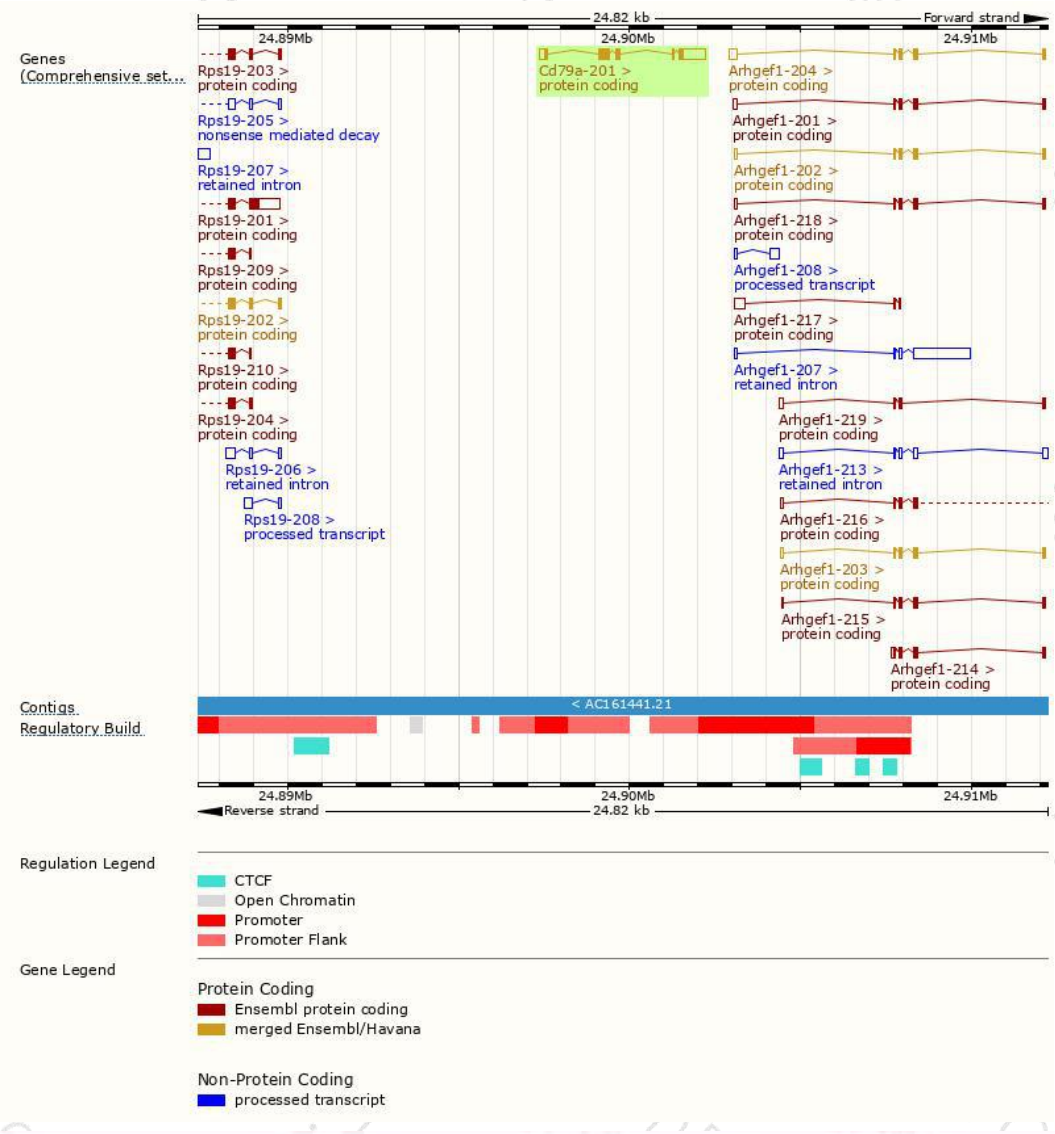
The gene has 1 transcript,and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Cd79a-201	ENSMUST00000003469.7	1457	220aa	Protein coding	CCDS20967	P11911	TSL:1 GENCODE basic APPRIS is a system to annotate alternatively spliced transcripts based on a range of computational methods to identify the most functionally important transcript(s) of a gene. APPRIS P1

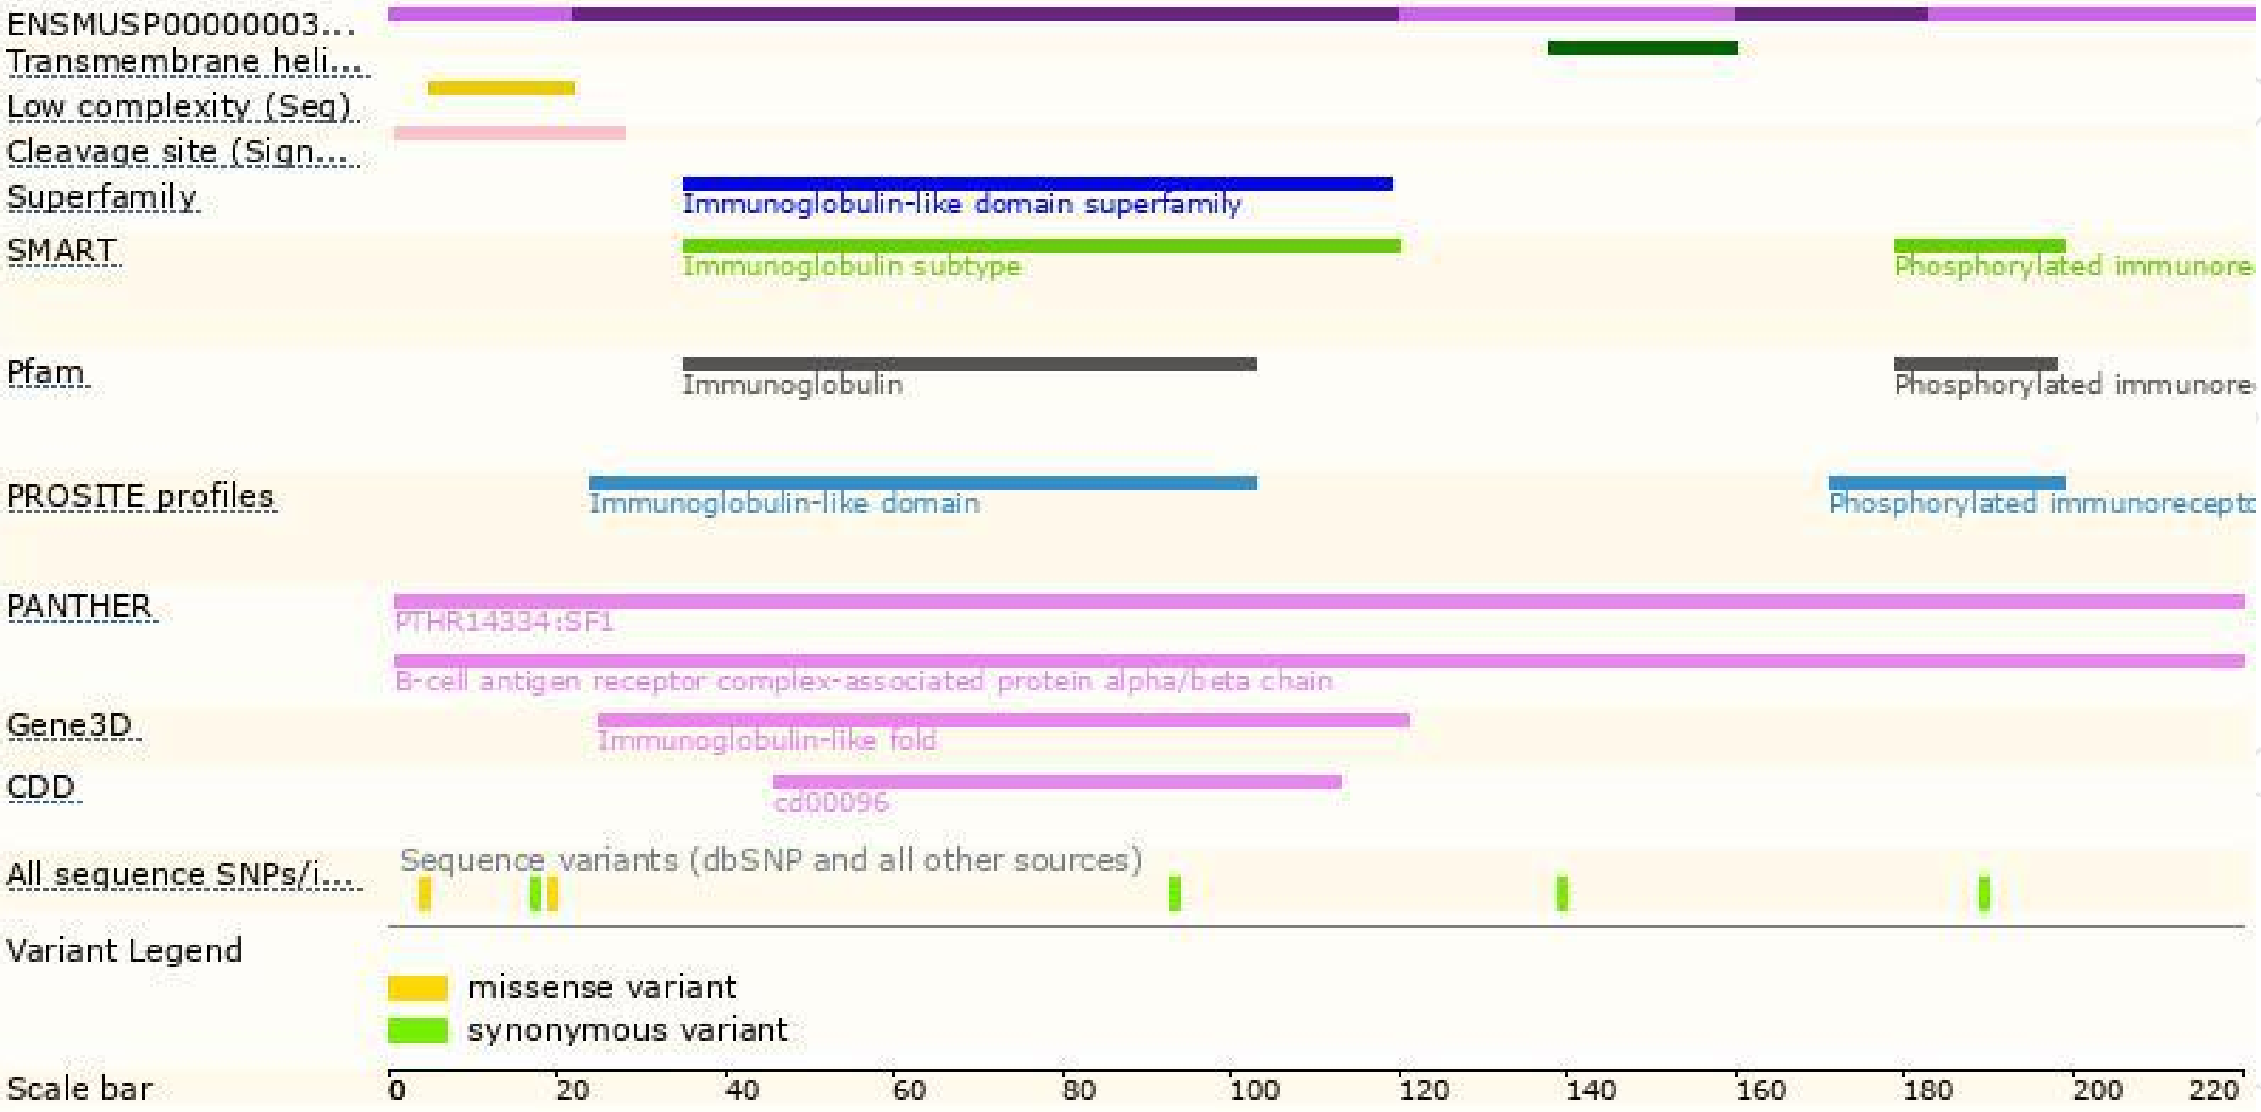
The strategy is based on the design of *Cd79a-201* transcript,the transcription is shown below



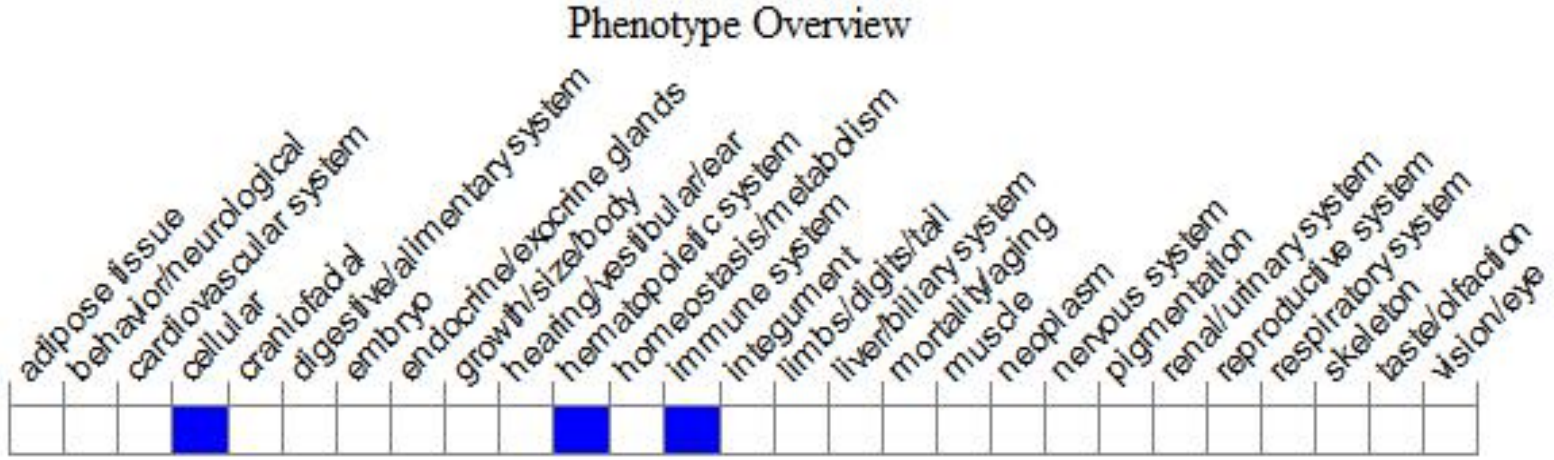
Genomic location distribution



Protein domain



Mouse phenotype description(MGI)



Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data,homozygotes for targeted null mutations exhibit arrested development of B cells at the pro-B cell stage due to diminished signaling of the B cell receptor.
