

# Pds5b Cas9-CKO Strategy

Designer: Lingyan Wu

Reviewer: Jiayuan Yao

Design Date: 2020-4-23

# Project Overview

**Project Name**

*Pds5b*

**Project type**

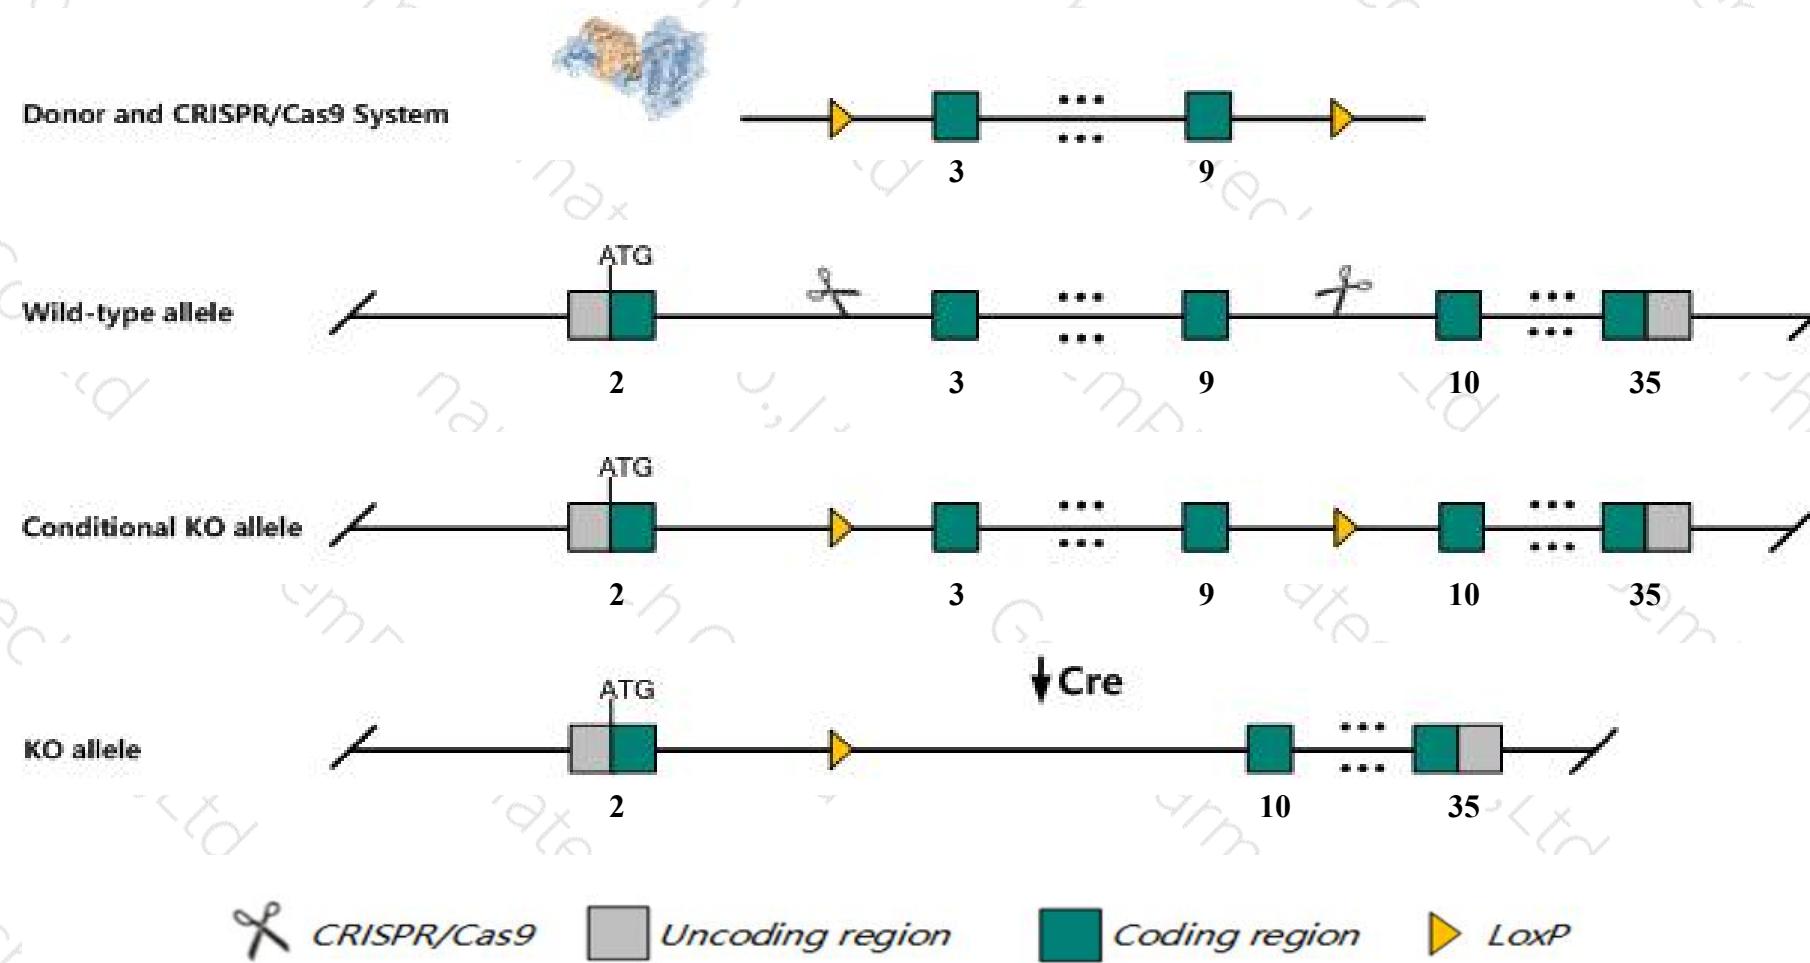

Cas9-CKO

**Strain background**

C57BL/6J

# Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Pds5b* gene. The schematic diagram is as follows:

# Technical routes

- The *Pds5b* gene has 8 transcripts. According to the structure of *Pds5b* gene, exon3-exon9 of *Pds5b-208* (ENSMUST00000202170.3) transcript is recommended as the knockout region. The region contains 854bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Pds5b* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6J mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6J mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

# Notice

- According to the existing MGI data, mice homozygous for a null allele exhibit embryonic and neonatal lethality with cardiac defects, craniofacial abnormalities, axial skeletal defects, shortening of most of the long bones, abnormal enteric nervous system morphology, and decreased germ cells.
- Transcript *Pds5b-203* may not be affected.
- The *Pds5b* gene is located on the Chr5. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

# Gene information (NCBI)

## Pds5b PDS5 cohesin associated factor B [Mus musculus (house mouse)]

Gene ID: 100710, updated on 13-Mar-2020

### Summary

**Official Symbol** Pds5b provided by [MGI](#)

**Official Full Name** PDS5 cohesin associated factor B provided by [MGI](#)

**Primary source** [MGI:MGI:2140945](#)

**See related** [Ensembl:ENSMUSG00000034021](#)

**Gene type** protein coding

**RefSeq status** VALIDATED

**Organism** [Mus musculus](#)

**Lineage** Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

**Also known as** AI646570, AS3, AW212954, Aprin, Tg(Wap-ERBB2)229Wzw, WAP-Her-2, mKIAA0979

**Expression** Broad expression in CNS E11.5 (RPKM 11.8), limb E14.5 (RPKM 9.2) and 22 other tissues [See more](#)

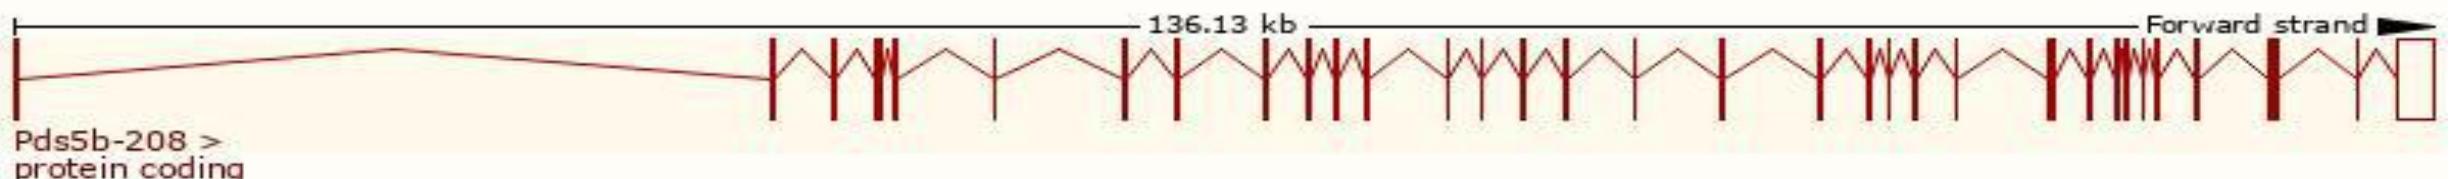

**Orthologs** [human](#) [all](#)

# Transcript information (Ensembl)

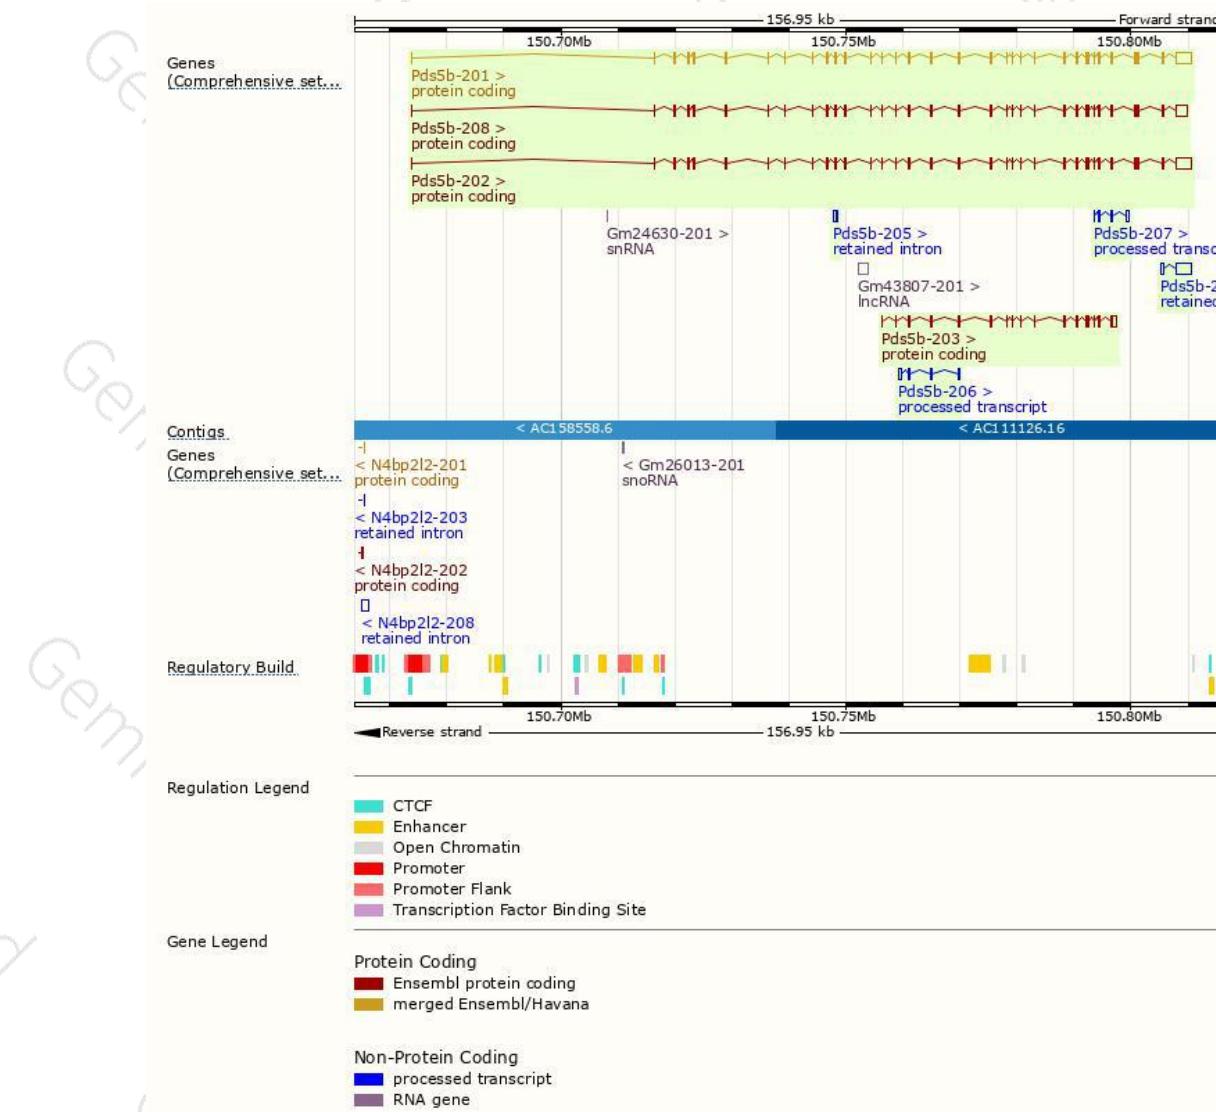

The gene has 8 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Pds5b-201	<a href="#">ENSMUST0000016569_10</a>	7417	<a href="#">1446aa</a>	Protein coding	<a href="#">CCDS39412</a>	<a href="#">Q4VA53</a>	TSL:1 GENCODE basic APPRIS is a system to annotate alternatively spliced transcripts based on a range of computational methods to identify the most functionally important transcript(s) of a gene. APPRIS P3
Pds5b-208	<a href="#">ENSMUST0000020170_3</a>	6598	<a href="#">1448aa</a>	Protein coding	<a href="#">CCDS85012</a>	<a href="#">Q4VA53</a>	TSL:5 GENCODE basic APPRIS is a system to annotate alternatively spliced transcripts based on a range of computational methods to identify the most functionally important transcript(s) of a gene. APPRIS ALT2
Pds5b-202	<a href="#">ENSMUST0000038900_14</a>	7315	<a href="#">1449aa</a>	Protein coding	-	<a href="#">F8WHU5</a>	TSL:5 GENCODE basic APPRIS is a system to annotate alternatively spliced transcripts based on a range of computational methods to identify the most functionally important transcript(s) of a gene. APPRIS ALT2
Pds5b-203	<a href="#">ENSMUST00000110486_1</a>	2900	<a href="#">701aa</a>	Protein coding	-	<a href="#">Q4VA53</a>	TSL:1 GENCODE basic

Pds5b-204	<a href="#">ENSMUST00000132947_1</a>	3152	No protein	Retained intron	-	-	TSL:1
Pds5b-205	<a href="#">ENSMUST00000133738_1</a>	584	No protein	Retained intron	-	-	TSL:3

The strategy is based on the design of *Pds5b-208* transcript, the transcription is shown below:

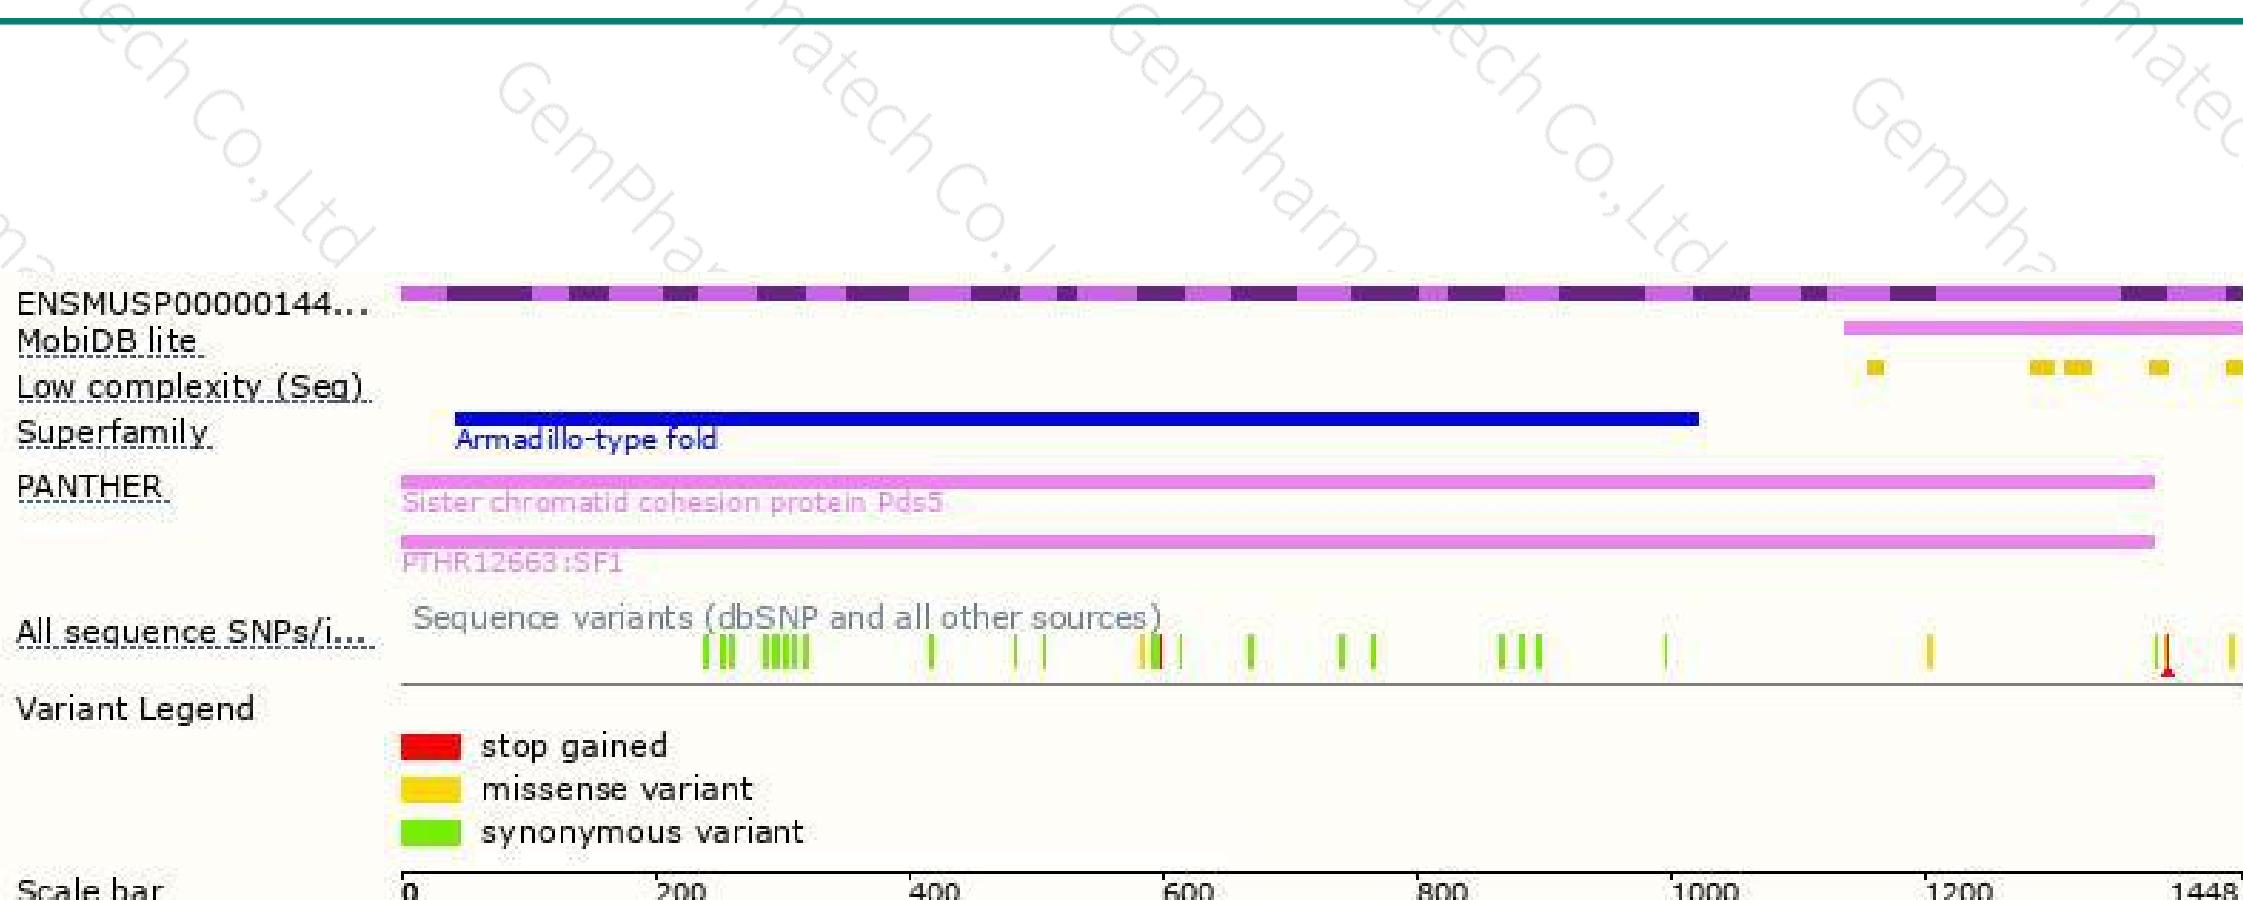

# Genomic location distribution

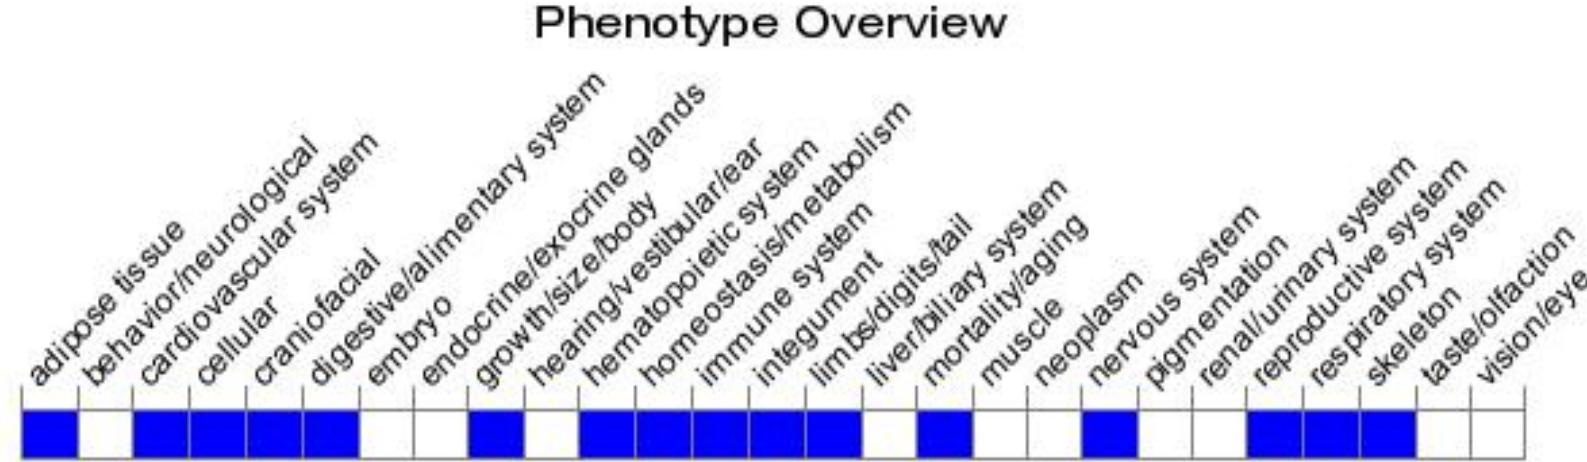

集萃药康  
GemPharmatech

# Protein domain

# Mouse phenotype description(MGI)

*Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).*

According to the existing MGI data, mice homozygous for a null allele exhibit embryonic and neonatal lethality with cardiac defects, craniofacial abnormalities, axial skeletal defects, shortening of most of the long bones, abnormal enteric nervous system morphology, and decreased germ cells.
