

Adgrg7 Cas9-CKO Strategy

Designer: Huan Wang

Design Date: 2019-7-22

Project Overview

Project Name

Adgrg7

Project type

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Adgrg7* gene. The schematic diagram is as follows:

Technical routes

- The *Adgrg7* gene has 1 transcript. According to the structure of *Adgrg7* gene, exon2-exon4 of *Adgrg7-201* (ENSMUST00000023437.4) transcript is recommended as the knockout region. The region contains 332bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Adgrg7* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, Mice homozygous for a knock-out allele exhibit reduced body weight gain and increased frequency of peristalsis and slow wave potential in the small intestine.
- The *Adgrg7* gene is located on the Chr16. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Adgrg7 adhesion G protein-coupled receptor G7 [Mus musculus (house mouse)]

Gene ID: 239853, updated on 24-Feb-2019

Summary

Official Symbol	Adgrg7 provided by MGI
Official Full Name	adhesion G protein-coupled receptor G7 provided by MGI
Primary source	MGI:MGI:2441732
See related	Ensembl:ENSMUSG00000022755
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	9130020O16Rik, Gpr128
Expression	Biased expression in large intestine adult (RPKM 13.6), colon adult (RPKM 8.1) and 2 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

The gene has 1 transcript, and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Adgrg7-201	ENSMUST00000023437.4	2698	785aa	Protein coding	CCDS28225	Q8BM96	TSL:1 GENCODE basic APPRIS P1

The strategy is based on the design of *Adgrg7-201* transcript, The transcription is shown below

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a knock-out allele exhibit reduced body weight gain and increased frequency of peristalsis and slow wave potential in the small intestine.
