

Crim1 Cas9-CKO Strategy

Designer:

Huan Fan

Design Date:

2019-7-25

Project Overview

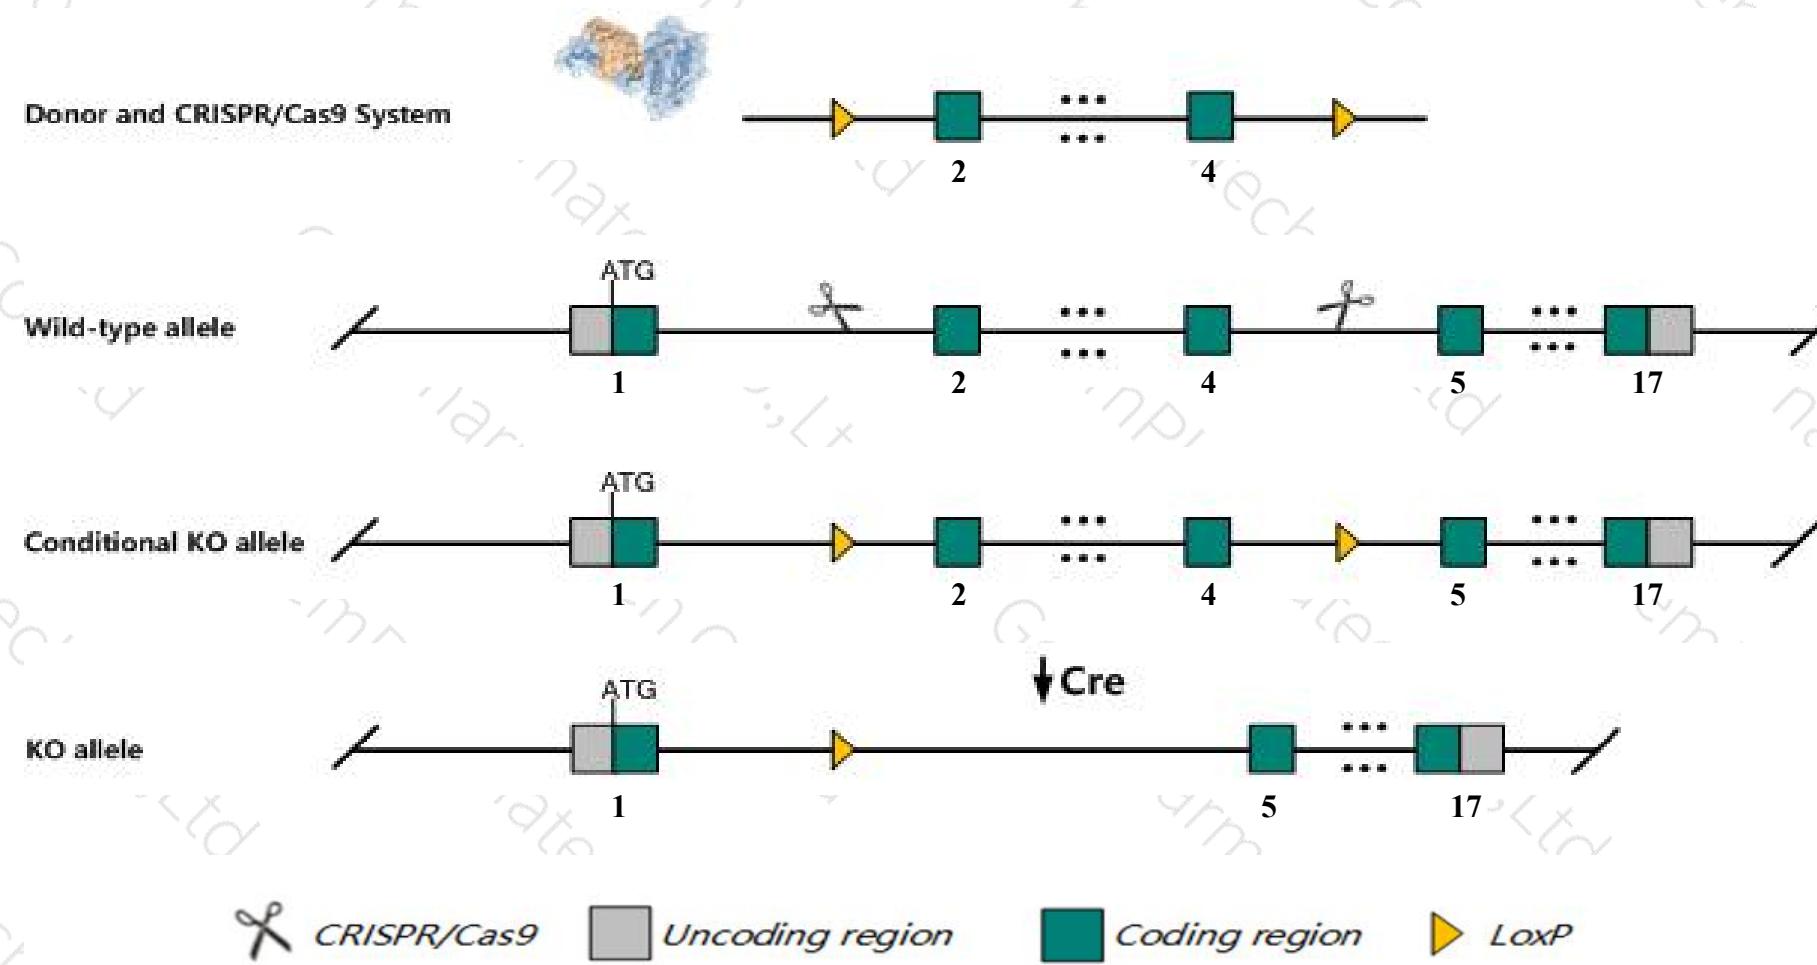

Project Name***Crim1***

Project type**Cas9-CKO**

Strain background**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Crim1* gene. The schematic diagram is as follows:

Technical routes

- The *Crim1* gene has 6 transcripts. According to the structure of *Crim1* gene, exon2-exon4 of *Crim1-201* (ENSMUST00000112498.2) transcript is recommended as the knockout region. The region contains 538bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Crim1* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Mutations in this locus cause perinatal lethality, syndactyly, and eye and kidney abnormalities.
- The *Crim1* gene is located on the Chr17. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Crim1 cysteine rich transmembrane BMP regulator 1 (chordin like) [Mus musculus (house mouse)]

Gene ID: 50766, updated on 31-Jan-2019

Summary

Official Symbol Crim1 provided by [MGI](#)

Official Full Name cysteine rich transmembrane BMP regulator 1 (chordin like) provided by [MGI](#)

Primary source [MGI:MGI:1354756](#)

See related [Ensembl:ENSMUSG00000024074](#)

Gene type protein coding

RefSeq status VALIDATED

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as AU015004

Expression Ubiquitous expression in lung adult (RPKM 22.3), ovary adult (RPKM 19.7) and 24 other tissues [See more](#)

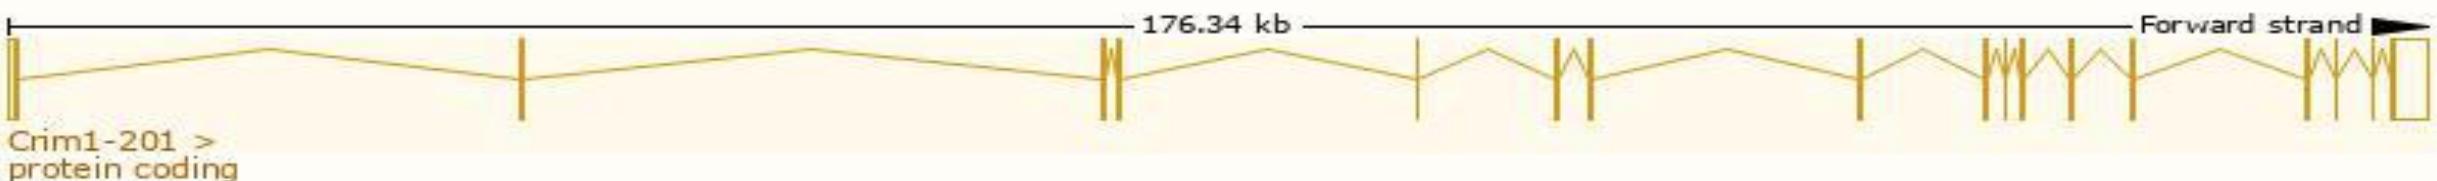

Orthologs [human](#) [all](#)

Transcript information (Ensembl)

The gene has 6 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Crim1-201	ENSMUST00000112498.2	5995	1037aa	Protein coding	CCDS28976	Q9JLL0	TSL:1 GENCODE basic APPRIS P1
Crim1-205	ENSMUST00000234700.1	2487	812aa	Protein coding	-	-	CDS 5' incomplete
Crim1-204	ENSMUST00000234546.1	732	244aa	Protein coding	-	-	5' and 3' truncations in transcript evidence prevent annotation of the start and the end of the CDS. CDS 5' and 3' incomplete
Crim1-206	ENSMUST00000234964.1	632	211aa	Protein coding	-	-	5' and 3' truncations in transcript evidence prevent annotation of the start and the end of the CDS. CDS 5' and 3' incomplete
Crim1-203	ENSMUST00000234439.1	547	183aa	Protein coding	-	-	5' and 3' truncations in transcript evidence prevent annotation of the start and the end of the CDS. CDS 5' and 3' incomplete
Crim1-202	ENSMUST00000234059.1	821	103aa	Nonsense mediated decay	-	-	CDS 5' incomplete

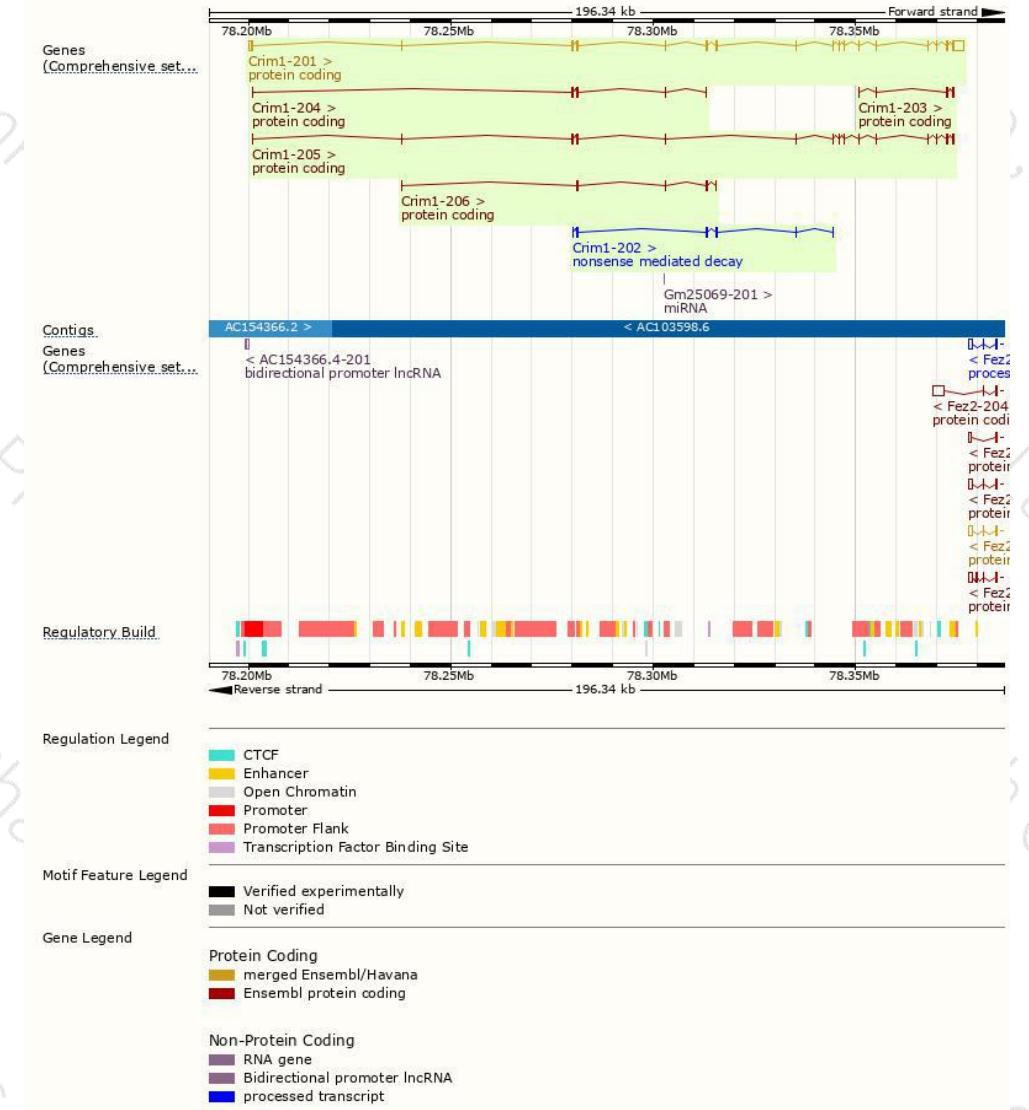

The strategy is based on the design of *Crim1-201* transcript, The transcription is shown below

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mutations in this locus cause perinatal lethality, syndactyly, and eye and kidney abnormalities.
