# Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Bach1* gene. The schematic diagram is as follows:

# Technical routes

- The *Bach1* gene has 3 transcripts. According to the structure of *Bach1* gene, exon2-exon5 of *Bach1*-201(ENSMUST00000026703.5) transcript is recommended as the knockout region. The region contains all of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Bach1* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, homozygous null mice are healthy and fertile with no gross abnormalities but express elevated levels of HMOX1.
- The *Bach1* gene is located on the Chr16. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

# Transcript information (Ensembl)

The gene has 3 transcripts,all transcripts are shown below:

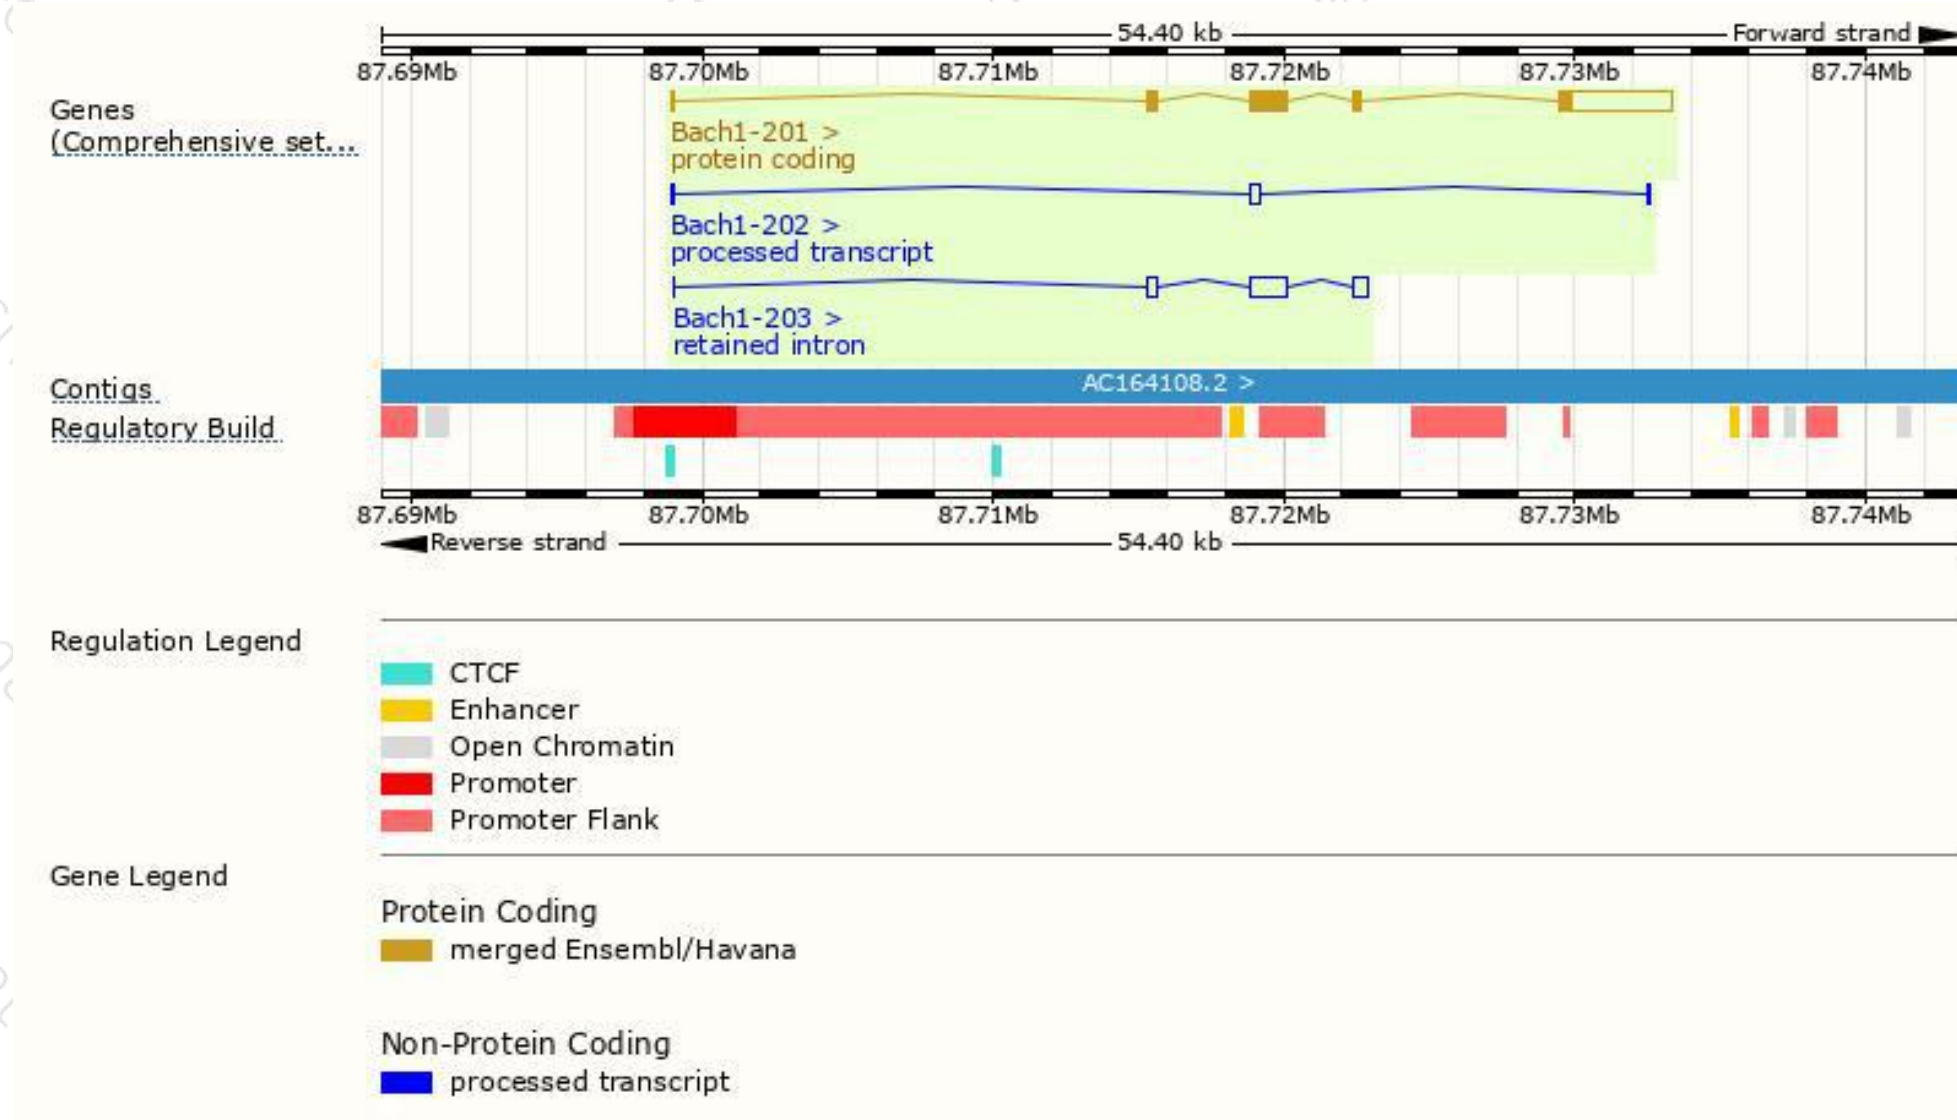

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Bach1-201	<a href="#">ENSMUST00000026703.5</a>	5867	<a href="#">739aa</a>	Protein coding	<a href="#">CCDS28293</a>	<a href="#">P97302 Q3URL4</a>	TSL:1 GENCODE basic APPRIS P1
Bach1-202	<a href="#">ENSMUST00000151046.1</a>	545	No protein	Processed transcript	-	-	TSL:5
Bach1-203	<a href="#">ENSMUST00000156958.1</a>	2210	No protein	Retained intron	-	-	TSL:1

The strategy is based on the design of *Bach1-201* transcript,the transcription is shown below:
