Conditional Knockout strategy

400-9660890

This model will use CRISPR/Cas9 technology to edit the *Plaat3* gene. The schematic diagram is as follows:

江苏集萃药康生物科技股份有限公司

GemPharmatech Co., Ltd.

The *Plaat3* gene has 4 transcripts. According to the structure of *Plaat3* gene, exon3 of *Plaat3*-201(ENSMUST00000025925.10) transcript is recommended as the knockout region. The region contains 103bp coding sequence. Knock out the region will result in disruption of protein function.

➤ In this project we use CRISPR/Cas9 technology to modify *Plaat3* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

> The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

According to the existing MGI data, mice homozygous for a knock-out allele exhibit increased lipolysis, decreased susceptibility to diet- or leptin deficiency-induced obesity, hepatic steatosis and altered glucose homeostasis.
The *Plaat3* gene is located on the Chr19. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
This strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

\$?

Plaat3 phospholipase A and acyltransferase 3 [Mus musculus (house mouse)]

Gene ID: 225845, updated on 31-Jan-2019

Summary

Official Symbol	Plaat3 provided by MGI
Official Full Name	phospholipase A and acyltransferase 3 provided by MGI
Primary source	MGI:MGI:2179715
See related	Ensembl:ENSMUSG0000060675
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Also known as	AdPLA, C78643, HRSL3, HrasIs3, Hrev107, MLP-3, Pla2g16
Expression	Broad expression in subcutaneous fat pad adult (RPKM 47.3), genital fat pad adult (RPKM 30.1) and 19 other tissues See more
Orthologs	human all

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, mice homozygous for a knock-out allele exhibit increased lipolysis, decreased susceptibility to diet- or leptin deficiency-induced obesity, hepatic steatosis and altered glucose homeostasis.
