---

---

**Project type**

---

**Cas9-CKO**

---

---

**Strain background**

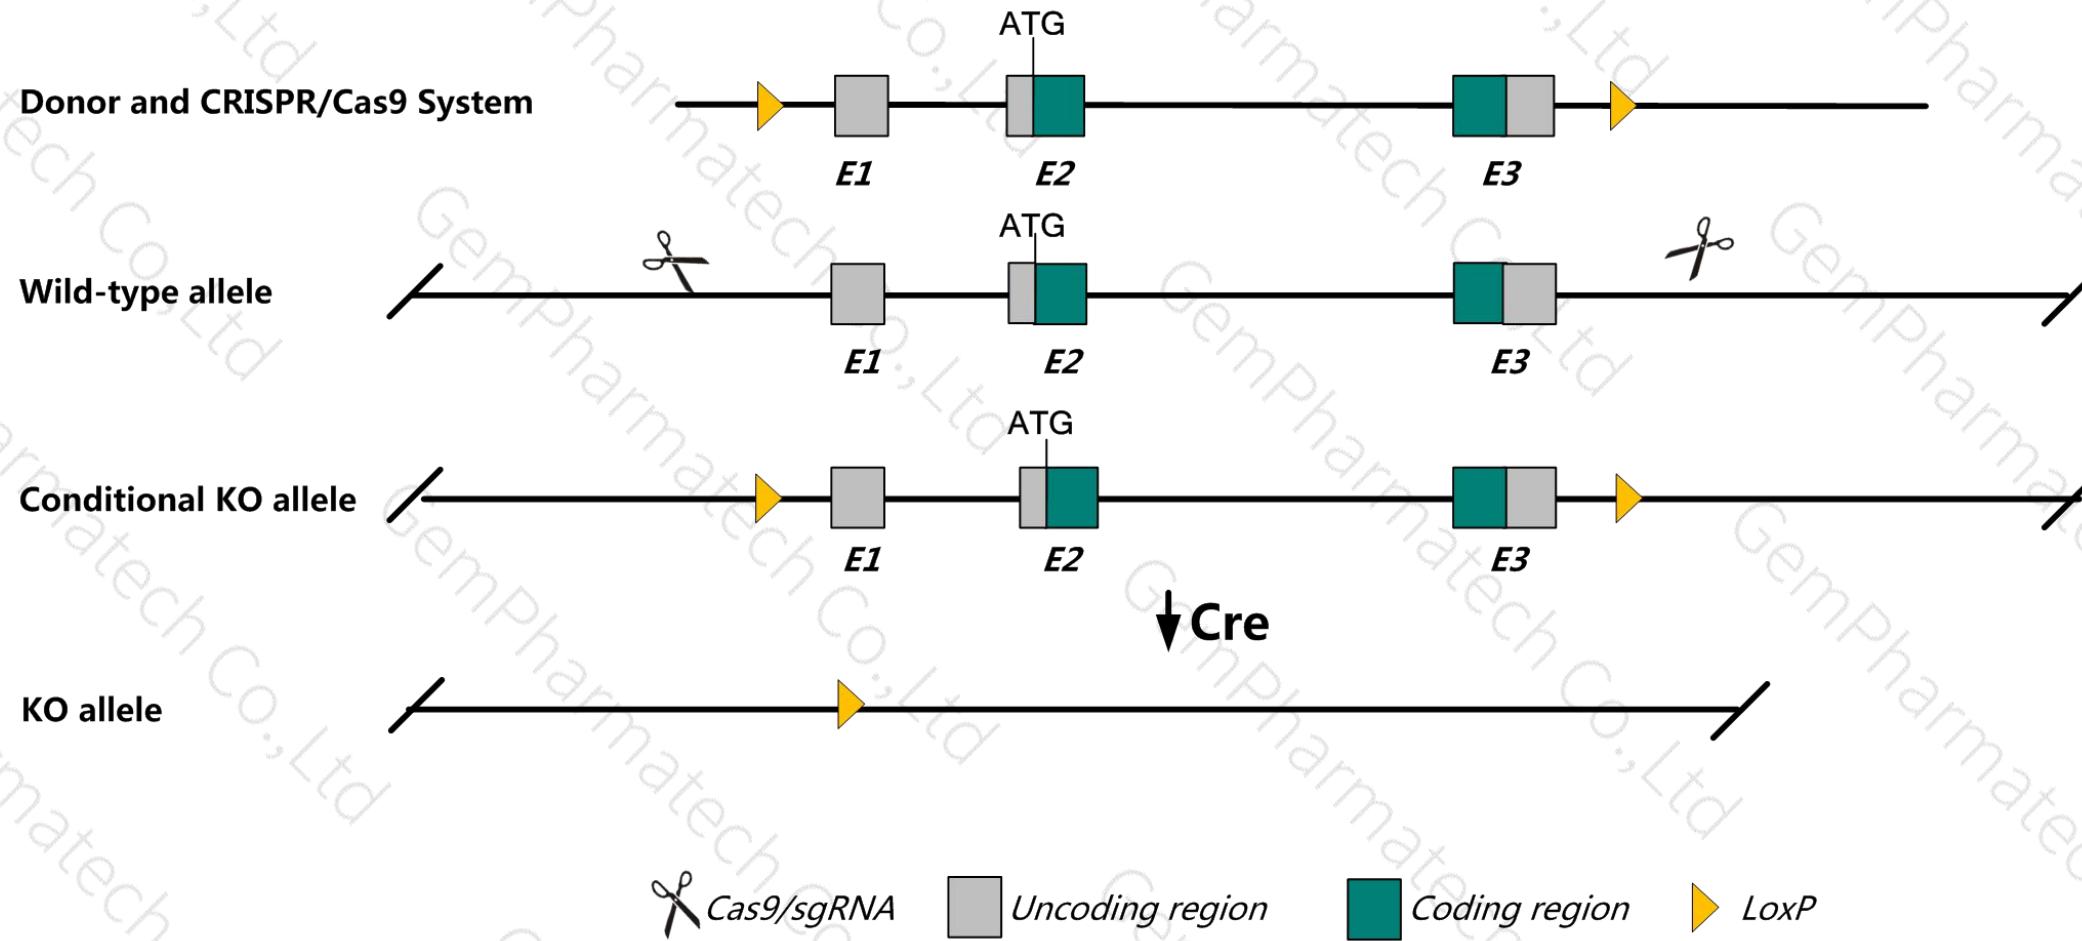

---

**C57BL/6JGpt**

---

# Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *S100a9* gene. The schematic diagram is as follows:

# Technical routes

- The *S100a9* gene has 2 transcripts. According to the structure of *S100a9* gene, exon1-exon3 of *S100a9-202* (ENSMUST00000117167.1) transcript is recommended as the knockout region. The region contains most of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *S100a9* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

# Notice

- According to the existing MGI data, Mice homozygous for one null allele exhibit abnormal immune physiology.
- The *S100a9* gene is located on the Chr3. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

# Gene information (NCBI)

## S100a9 S100 calcium binding protein A9 (calgranulin B) [Mus musculus (house mouse)]

Gene ID: 20202, updated on 9-Apr-2019

### Summary

**Official Symbol** S100a9 provided by [MGI](#)

**Official Full Name** S100 calcium binding protein A9 (calgranulin B) provided by [MGI](#)

**Primary source** [MGI](#):[MGI](#):1338947

**See related** [Ensembl](#):[ENSMUSG00000056071](#)

**Gene type** protein coding

**RefSeq status** VALIDATED

**Organism** [Mus musculus](#)

**Lineage** Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

**Also known as** 60B8Ag, AW546964, BEE22, Cagb, GAGB, L1Ag, MRP14, p14

**Expression** Biased expression in liver E18 (RPKM 1633.0), liver E14 (RPKM 204.2) and 1 other tissue [See more](#)

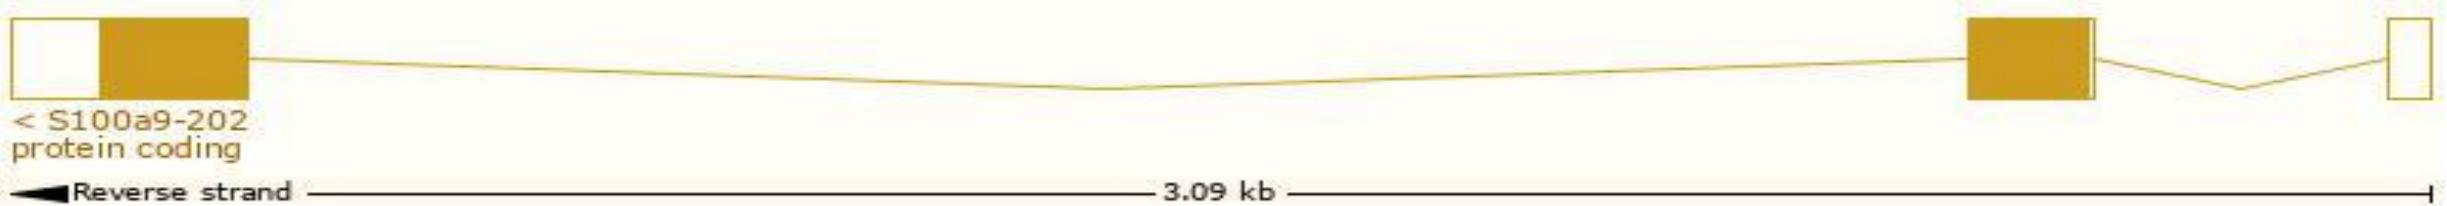

**Orthologs** [human](#) [all](#)

# Transcript information (Ensembl)

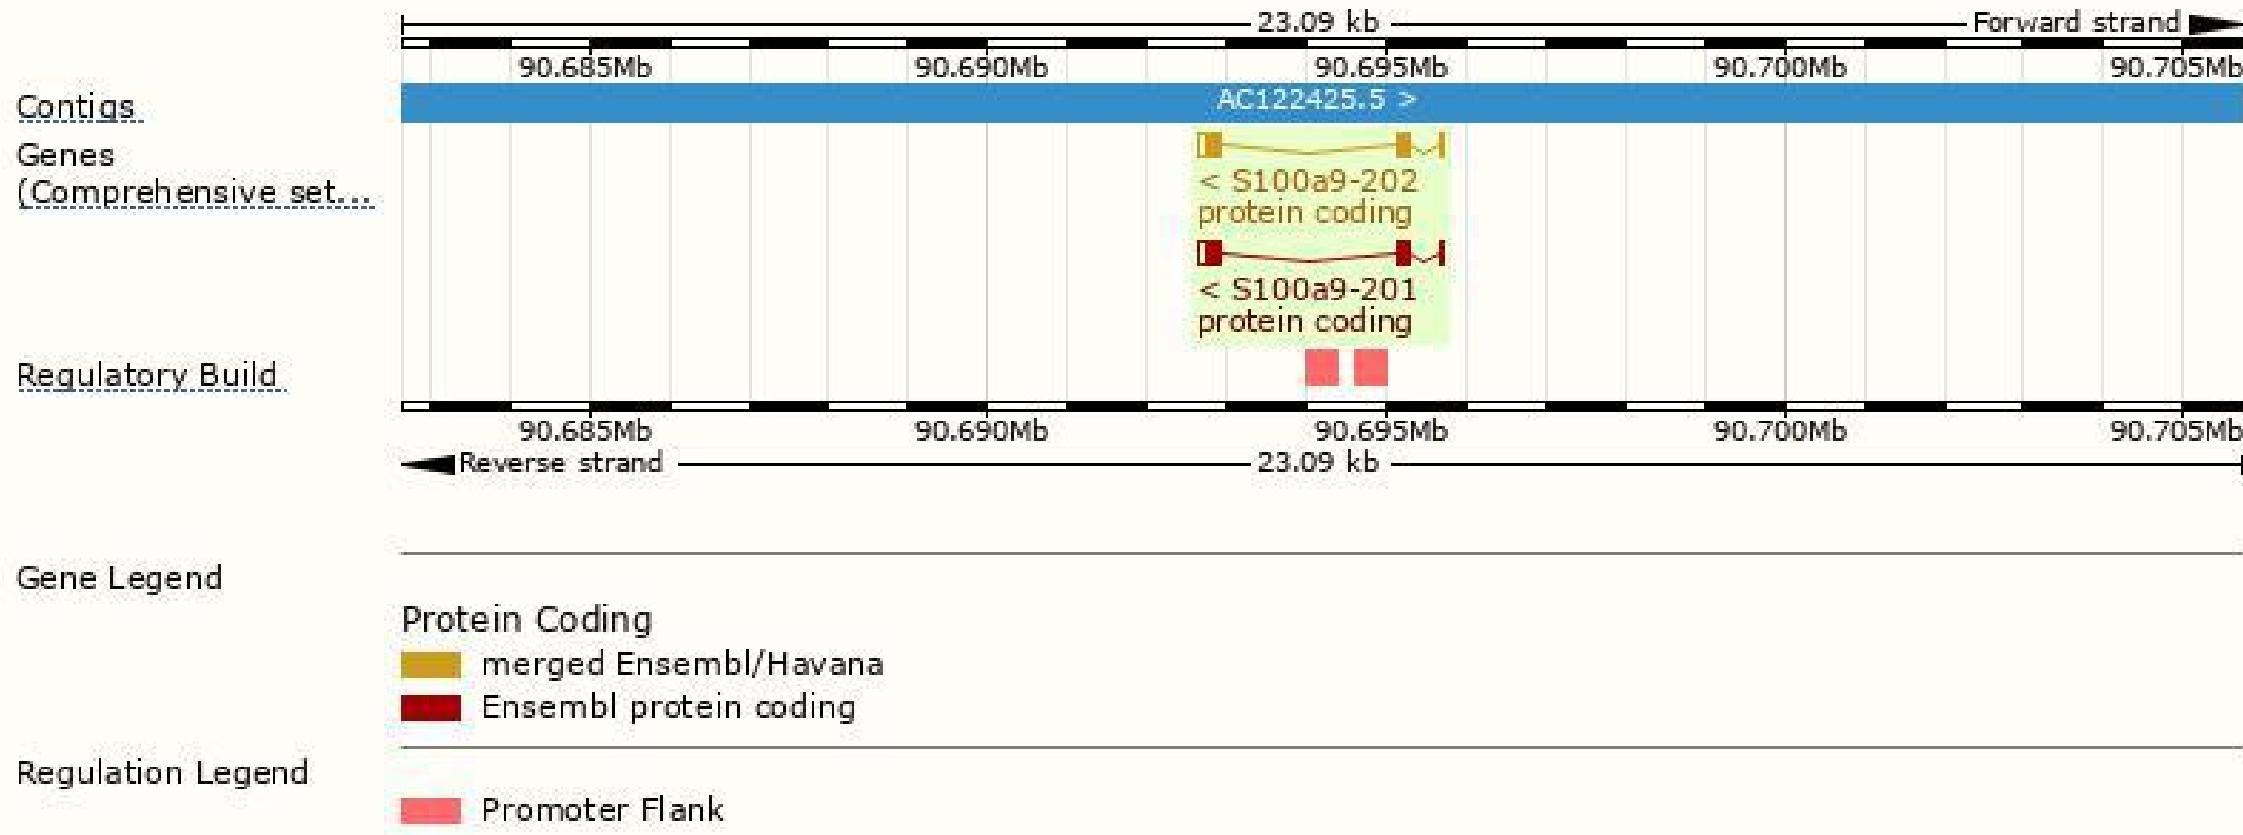

The gene has 2 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
S100a9-202	<a href="#">ENSMUST00000117167.1</a>	519	<a href="#">113aa</a>	Protein coding	<a href="#">CCDS17543</a>	<a href="#">P31725 Q3UP42</a>	TSL:1 GENCODE basic APPRIS P1
S100a9-201	<a href="#">ENSMUST00000069960.11</a>	512	<a href="#">113aa</a>	Protein coding	<a href="#">CCDS17543</a>	<a href="#">P31725 Q3UP42</a>	TSL:1 GENCODE basic APPRIS P1

The strategy is based on the design of S100a9-202 transcript, The transcription is shown below

# Mouse phenotype description(MGI)

*Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).*

According to the existing MGI data, Mice homozygous for one null allele exhibit abnormal immune physiology.
