# Nup205 Cas9-KO Strategy

Designer: Daohua Xu

**Design Date:** 2019-8-5

# **Project Overview**

**Project Name** 

*Nup205* 

**Project type** 

Cas9-KO

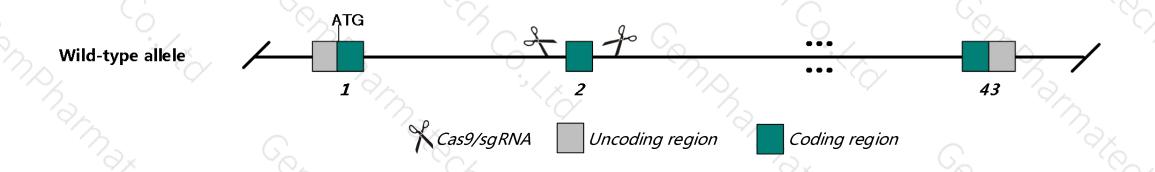

**Animal background** 

C57BL/6JGpt

# **Knockout strategy**

This model will use CRISPR/Cas9 technology to edit the *Nup205* gene. The schematic diagram is as follows:

## **Technical routes**

- The *Nup205* gene has 7 transcripts, According to the structure of *Nup205* gene, exon2 of *Nup205-201* transcript is recommended as the knockout region. The region contains the 143bp coding sequence. Knock out the region, result in destruction of protein.
- This project uses CRISPR/Cas9 technology to modify Nup205 gene. The brief process is as follows:
   gRNA was transcribed in vitro.Cas9 and gRNA were microinjected into fertilized eggs of C57BL/6JGpt
   mice and homologous recombination was carried out to obtain F0 mice. A stable and hereditary F1
   generation mouse model was obtained by mating F0 generation mice with C57BL/6JGpt mice which
   were confirmed positive by PCR-sequencing.

## Notice

- The *Nup205* gene is located in the Chr6. If the knockout mice are mixed with other mice, two target genes are avoided on the same chromosome as possible, otherwise the offspring of mice with double gene positive and homozygous gene knockout can not be obtained.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of gene transcription and translation processes, all risks cannot be predicted under existing information.
