Project Overview

Project Name	<i>Tnks</i>
Project type	Cas9-CKO
Strain background	C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Tnks* gene. The schematic diagram is as follows:

Technical routes

- The *Tnks* gene has 6 transcripts. According to the structure of *Tnks* gene, exon4-exon5 of *Tnks-201* (ENSMUST00000033929.5) transcript is recommended as the knockout region. The region contains 113bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Tnks* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Mice homozygous for a null allele fail to exhibit any abnormalities. Male mice homozygous for a gene trapped allele exhibit decreased fat pad weight, increased metabolism, hyperinsulinemia, and hypoglycemia.
- Transcript *Tnks-202 , 204* may not be affected.
- The *Tnks* gene is located on the Chr8. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Tnks tankyrase, TRF1-interacting ankyrin-related ADP-ribose polymerase [Mus musculus (house mouse)]

Gene ID: 21951, updated on 3-Feb-2019

Summary

Official Symbol Tnks provided by [MGI](#)

Official Full Name tankyrase, TRF1-interacting ankyrin-related ADP-ribose polymerase provided by [MGI](#)

Primary source [MGI:MGI:1341087](#)

See related [Ensembl:ENSMUSG00000031529](#)

Gene type protein coding

RefSeq status VALIDATED

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as 4930554K12Rik, AI662855, ARTD5, C86528, D130072O21Rik, TANK1, mTNKS1

Expression Ubiquitous expression in testis adult (RPKM 23.3), whole brain E14.5 (RPKM 14.7) and 28 other tissues [See more](#)

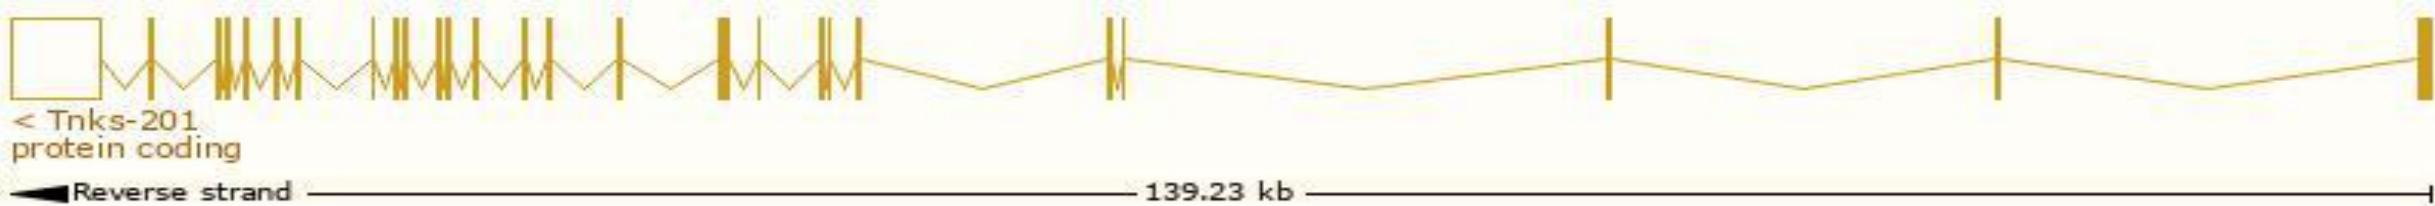

Orthologs [human](#) [all](#)

Transcript information (Ensembl)

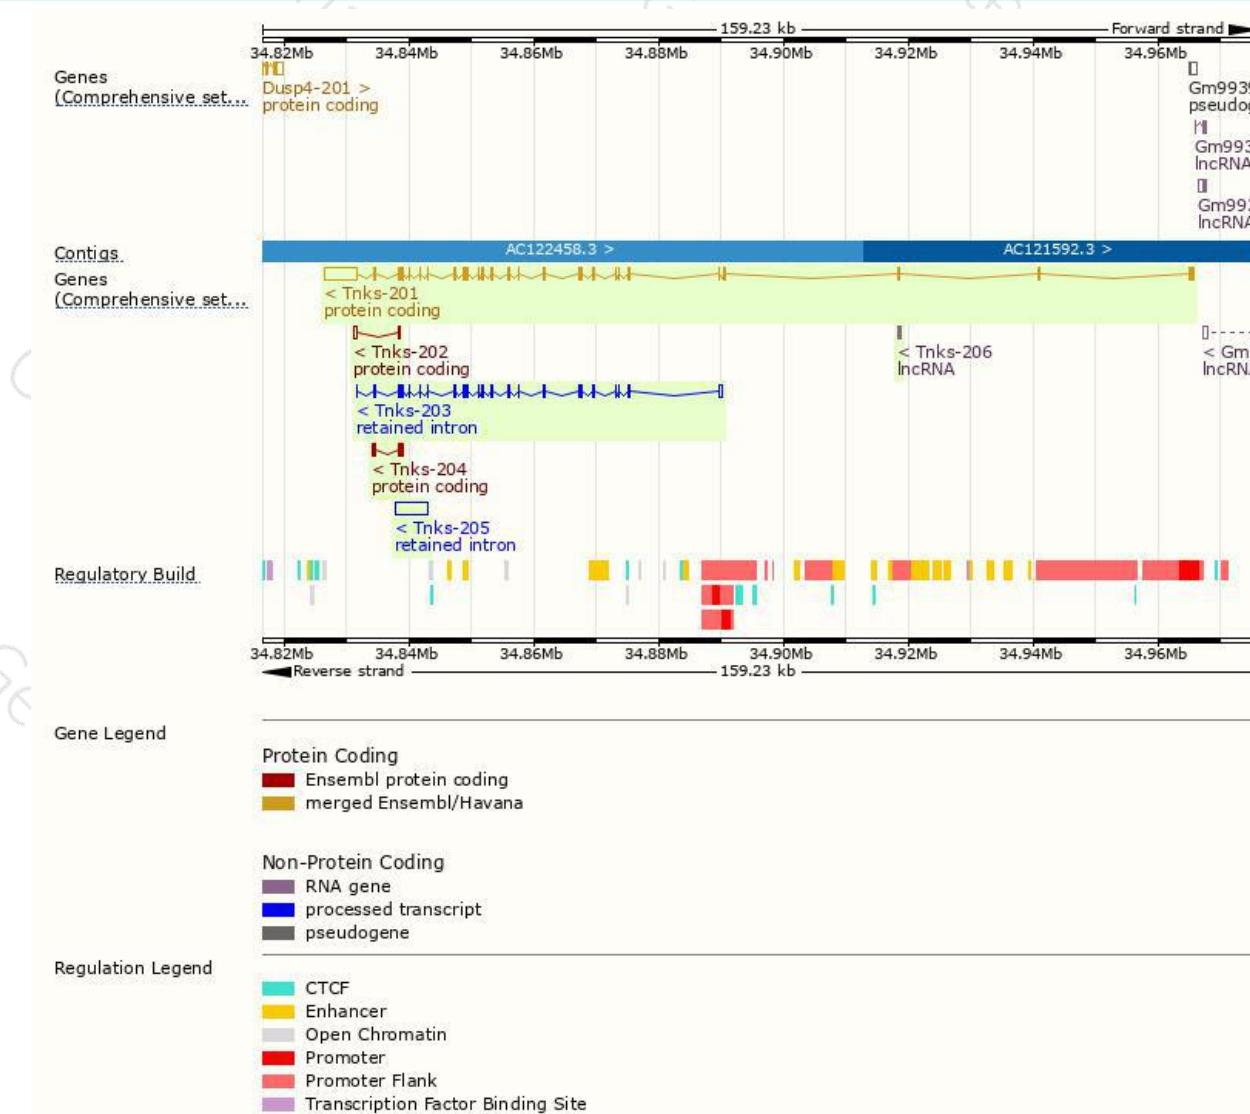

The gene has 6 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Tnks-201	ENSMUST00000033929.5	9163	1320aa	Protein coding	CCDS22242	Q6PFX9	TSL:1 GENCODE basic APPRIS P1
Tnks-204	ENSMUST00000210014.1	878	151aa	Protein coding	-	A0A1B0GRK1	CDS 5' incomplete TSL:3
Tnks-202	ENSMUST00000209632.1	688	48aa	Protein coding	-	A0A1B0GRH5	CDS 5' incomplete TSL:5
Tnks-205	ENSMUST00000210870.1	5265	No protein	Retained intron	-	-	TSL:NA
Tnks-203	ENSMUST00000209904.1	3417	No protein	Retained intron	-	-	TSL:1
Tnks-206	ENSMUST00000211065.1	295	No protein	lncRNA	-	-	TSL:5

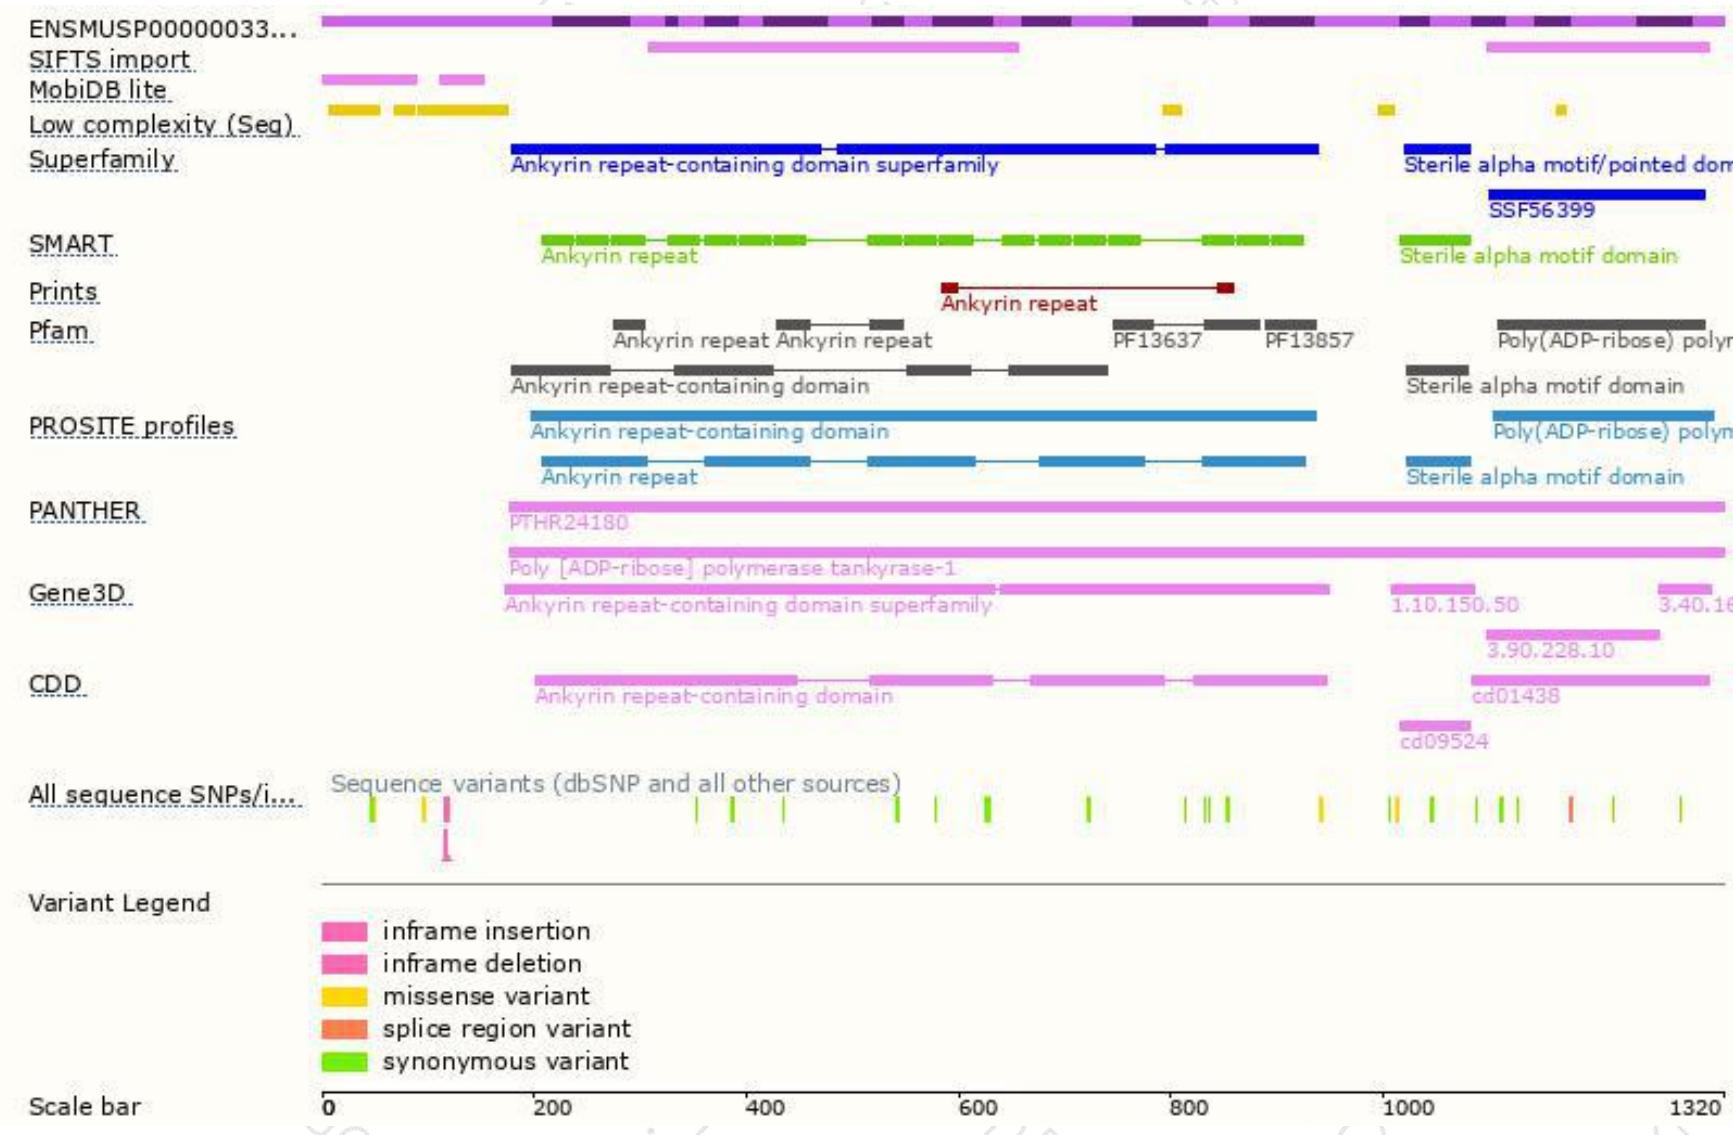

The strategy is based on the design of *Tnks-201* transcript, The transcription is shown below

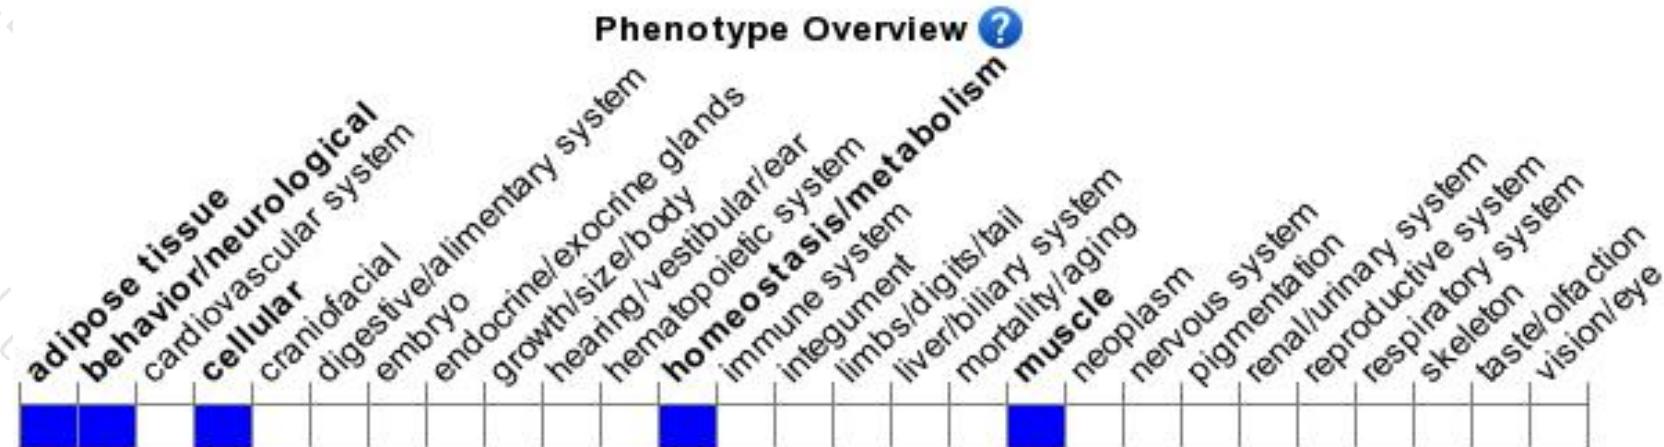

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a null allele fail to exhibit any abnormalities. Male mice homozygous for a gene trapped allele exhibit decreased fat pad weight, increased metabolism, hyperinsulinemia, and hypoglycemia.
