

Eno1 Cas9-CKO Strategy

Designer: Jinling Wang

Design Date: 2019-7-19

Project Overview

Project Name

Eno1

Project type

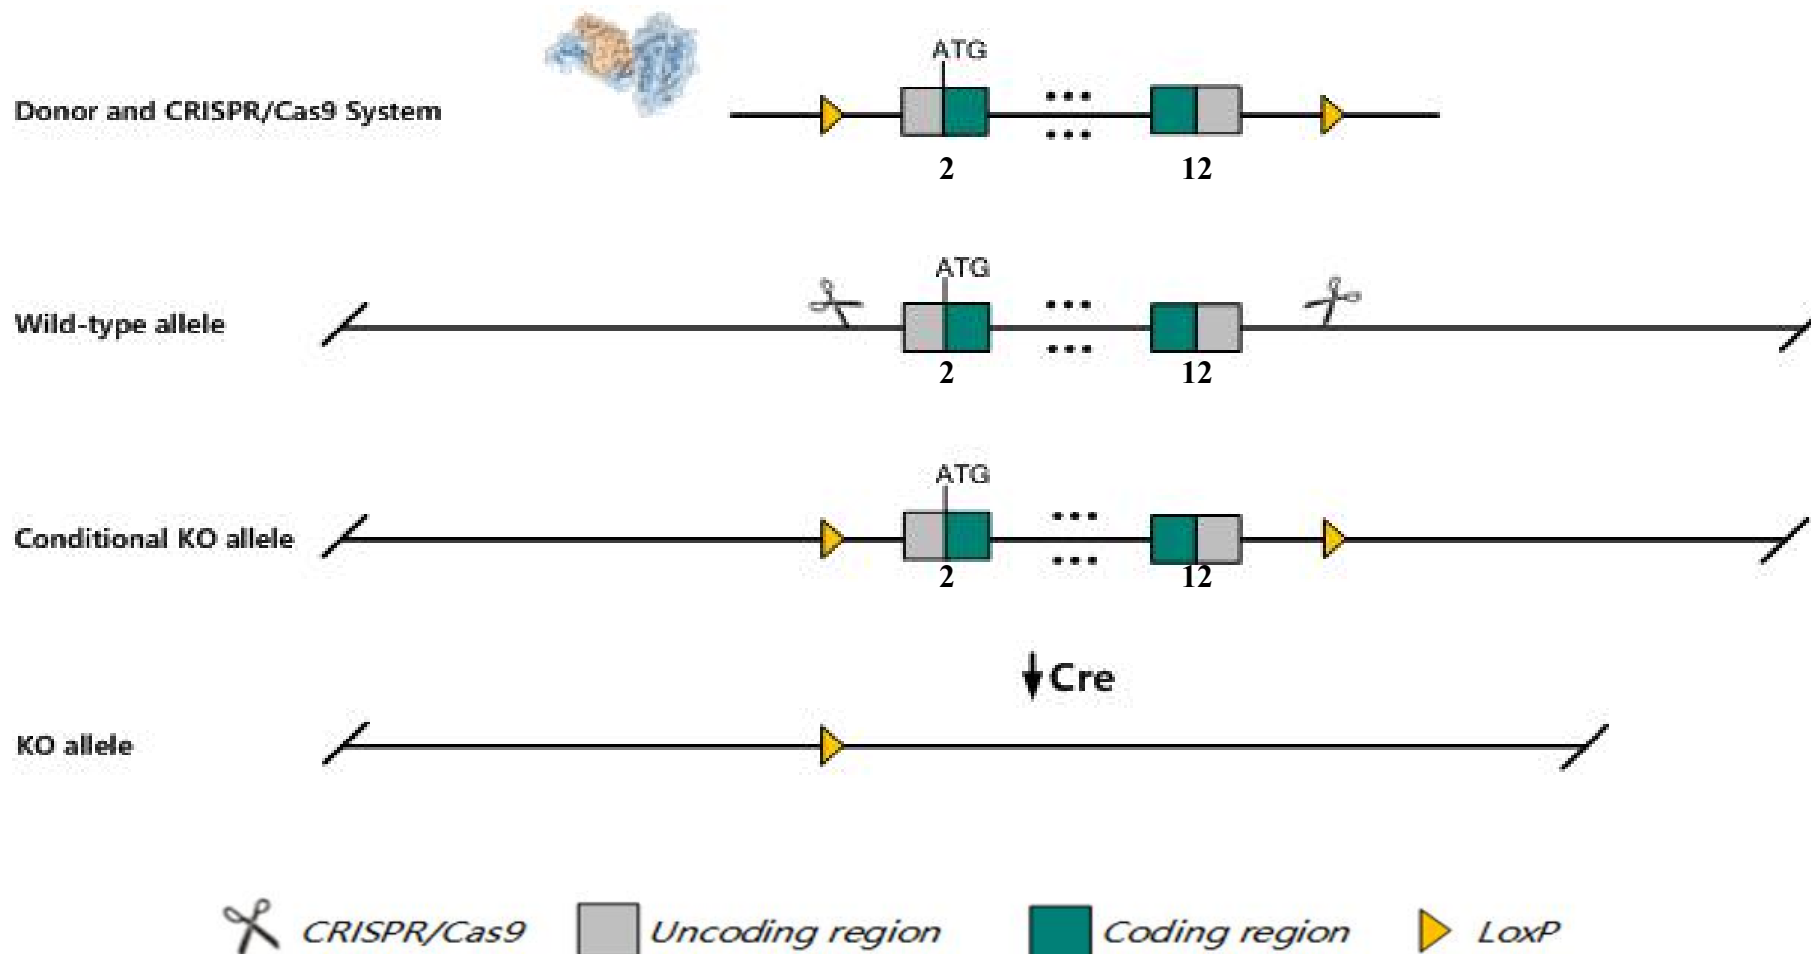

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Eno1* gene. The schematic diagram is as follows:

The *Eno1* gene has 11 transcripts. According to the structure of *Eno1* gene, exon2-exon12 of *Eno1-202* (ENSMUST00000080926.12) transcript is recommended as the knockout region. The region contains all of the coding sequence. Knock out the region will result in disruption of protein function.

In this project we use CRISPR/Cas9 technology to modify *Eno1* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

According to the existing MGI data, Homozygous animals exhibit growth arrest and embryonic lethality at approximately E6.5.

The *Eno1* gene is located on the Chr4. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.

This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Eno1 enolase 1, alpha non-neuron [Mus musculus (house mouse)]

Gene ID: 13806, updated on 7-Apr-2019

Summary

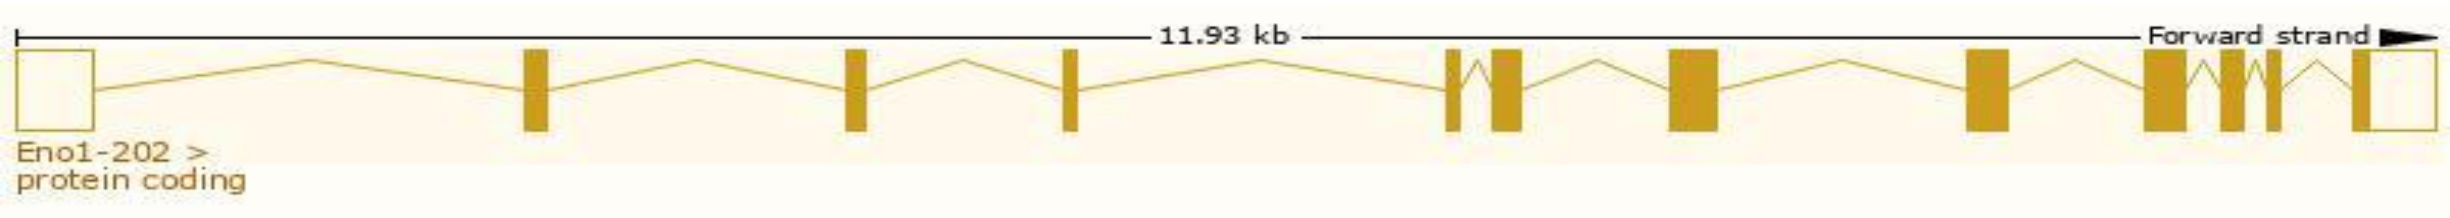

Official Symbol	Eno1 provided by MGI
Official Full Name	enolase 1, alpha non-neuron provided by MGI
Primary source	MGI:MGI:95393
See related	Ensembl:ENSMUSG00000063524
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	0610008I15, AL022784, Eno-1, MBP-1
Expression	Ubiquitous expression in kidney adult (RPKM 310.6), subcutaneous fat pad adult (RPKM 285.5) and 28 other tissues See more
Orthologs	human all

Transcript information Ensembl

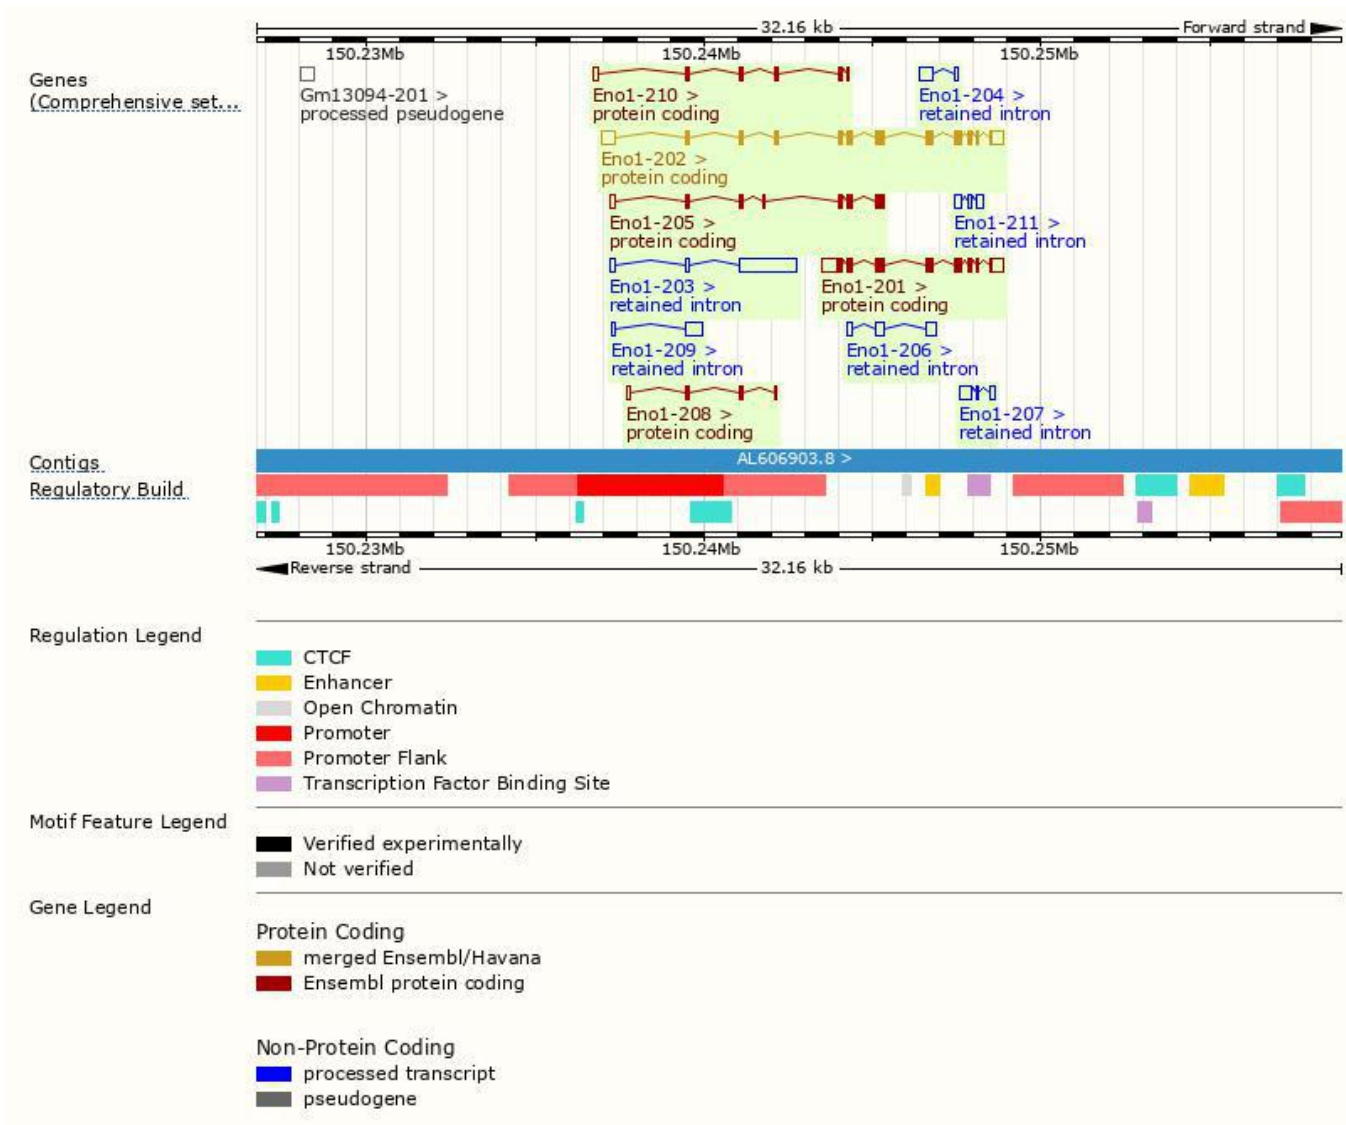

The gene has 11 transcripts,all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Eno1-202	ENSMUST00000080926.12	2027	434aa	Protein coding	CCDS18971	P17182 Q5FW97	TSL:1 GENCODE basic APPRIS P1

Eno1-211	ENSMUST00000151057.1	529	No protein	Retained intron	-	-	TSL:1
Eno1-204	ENSMUST00000133789.1	478	No protein	Retained intron	-	-	TSL:1

The strategy is based on the design of *Eno1-202* transcript,The transcription is shown below

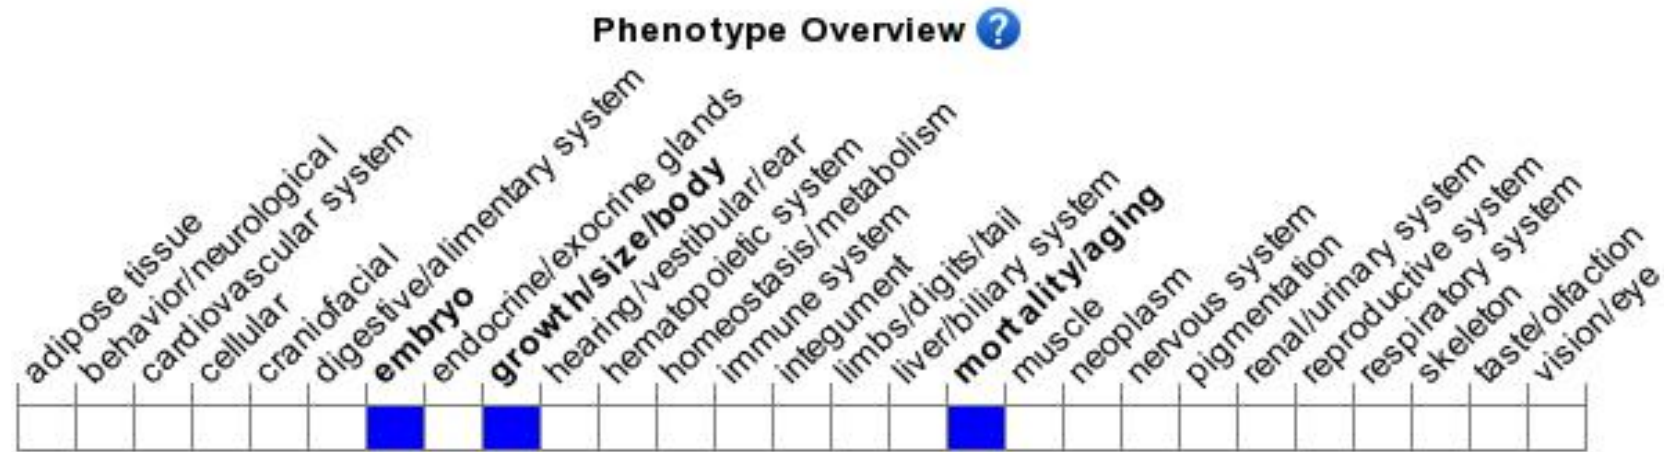

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Homozygous animals exhibit growth arrest and embryonic lethality at approximately E6.5.
