Conditional Knockout strategy

400-9660890

This model will use CRISPR/Cas9 technology to edit the *Fbxo45* gene. The schematic diagram is as follows:

江苏集萃药康生物科技股份有限公司

GemPharmatech Co., Ltd.

The Fbxo45 gene has 1 transcript. According to the structure of Fbxo45 gene, exon2-exon3 of Fbxo45-201 (ENSMUST00000042732.5) transcript is recommended as the knockout region. The region contains 543bp coding sequence. Knock out the region will result in disruption of protein function.

In this project we use CRISPR/Cas9 technology to modify *Fbxo45* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, Mice homozygous for a null mutation display neonatal lethality with respiratory failure, impaired motor neuron innervation and neuromuscular synapse morphology, abnormal sensory neuron projections, absence of several of the major axon tracts in the brain, and impaired neuron migration.
- The Fbxo45 gene is located on the Chr16. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

\$?

Fbxo45 F-box protein 45 [Mus musculus (house mouse)]

Gene ID: 268882, updated on 31-Jan-2019

Summary

Official Symbol	Fbxo45 provided by MGI
Official Full Name	F-box protein 45 provided by MGI
Primary source	MGI:MGI:2447775
See related	Ensembl:ENSMUSG00000035764
Gene type	protein coding
RefSeq status	PROVISIONAL
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Also known as	2610017J04Rik, Al463119, BC026799
Expression	Ubiquitous expression in CNS E18 (RPKM 9.9), cerebellum adult (RPKM 8.2) and 28 other tissues See more
Orthologs	human all

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, Mice homozygous for a null mutation display neonatal lethality with respiratory failure, impaired motor neuron innervation and neuromuscular synapse morphology, abnormal sensory neuron projections, absence of several of the major axon tracts in the brain, and impaired neuron migration.
