

Il19 Cas9-KO Strategy

empharmatect

Designer: Yanhua Shen Design Date: 2019-08-06

Project Overview

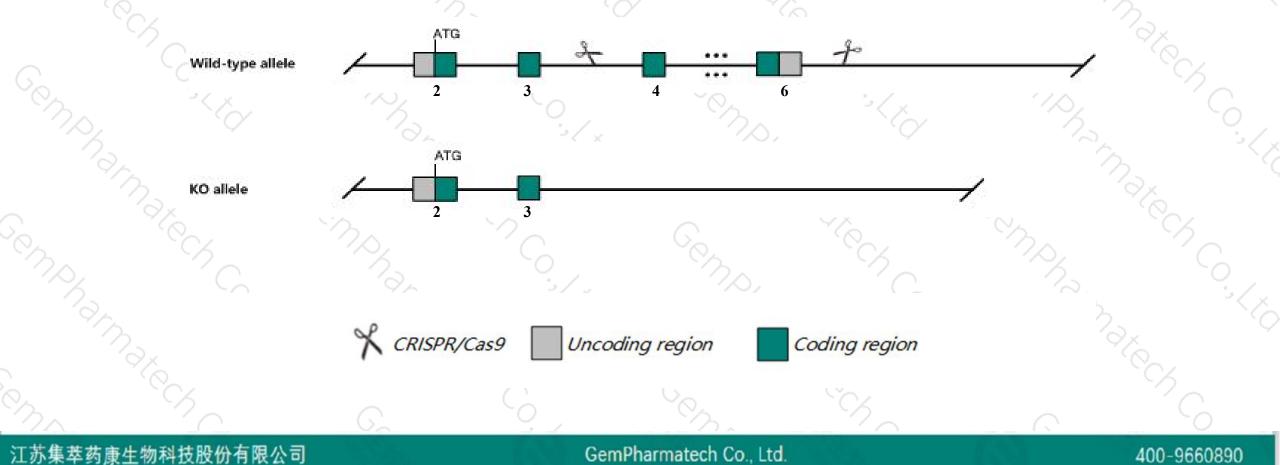

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Il19* gene. The schematic diagram is as follows:

- The *Il19* gene has 4 transcripts. According to the structure of *Il19* gene, exon4-exon6 of *Il19-203* (ENSMUST00000187410.6) transcript is recommended as the knockout region. The region contains 324bp coding sequence. Knock out the region will result in disruption of protein function.
- > In this project we use CRISPR/Cas9 technology to modify *Il19* gene. The brief process is as follows: CRISPR/Cas9 system w

- According to the existing MGI data, Mice homozygous for a knock-out allele exhibit interleukin-23 (IL-23)-dependent epidermal hyperplasia. Mice homozygous for a different knock-out allele exhibit increased susceptibility to induced colitis with reduced B cell infiltration in chronic colitis.
- The *Il19* gene is located on the Chr1. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gene information (NCBI)

II19 interleukin 19 [Mus musculus (house mouse)]

Gene ID: 329244, updated on 31-Jan-2019

Summary

Official Symbol	II19 provided by MGI
Official Full Name	interleukin 19 provided byMGI
Primary source	MGI:MGI:1890472
See related	Ensembl:ENSMUSG0000016524
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Expression	Low expression observed in reference datasetSee more
Orthologs	human all

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, Mice homozygous for a knock-out allele exhibit interleukin-23 (IL-23)-dependent epidermal hyperplasia. Mice homozygous for a different knock-out allele exhibit increased susceptibility to induced colitis with reduced B cell infiltration in chronic colitis.
