

***Lonp1* Cas9-KO Strategy**

Designer: Xiaojing Li
Design Date: 2019-9-11
Reviewer: Jia Yu

Project Overview

Project Name

Lonp1

Project type

Cas9-KO

Strain background

C57BL/6JGpt

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Lonpl* gene. The schematic diagram is as follows:

- The *Lonpl* gene has 2 transcripts. According to the structure of *Lonpl* gene, exon2-exon10 of *Lonpl*-201 (ENSMUST00000047226.9) transcript is recommended as the knockout region. The region contains 1259bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Lonpl* gene. The brief process is as follows: CRISPR/Cas9 system

- According to the existing MGI data, Mice homozygous for a knock-out allele exhibit embryonic lethality with embryonic growth retardation, small size and decreased mitochondrial DNA content. Mice heterozygous for this allele exhibit reduced chemically-induced tumors.
- The *Lonpl* gene is located on the Chr17. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gene information (NCBI)

Lonp1 lon peptidase 1, mitochondrial [Mus musculus (house mouse)]

Gene ID: 74142, updated on 7-Apr-2019

Summary

Official Symbol	Lonp1 provided by MGI
Official Full Name	lon peptidase 1, mitochondrial provided by MGI
Primary source	MGI:MGI:1921392
See related	Ensembl:ENSMUSG00000041168
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	1200017E13Rik, LON, Prss15
Expression	Broad expression in adrenal adult (RPKM 284.2), ovary adult (RPKM 104.2) and 27 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

The gene has 2 transcripts,all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Lonp1-201	ENSMUST00000047226.9	2951	949aa	Protein coding	CCDS28910	Q8CGK3	TSL:1 GENCODE basic APPRIS P1
Lonp1-202	ENSMUST00000233732.1	4362	141aa	Nonsense mediated decay	-	A0A3B2W834	

The strategy is based on the design of *Lonp1-201* transcript,The transcription is shown below

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a knock-out allele exhibit embryonic lethality with embryonic growth retardation, small size and decreased mitochondrial DNA content. Mice heterozygous for this allele exhibit reduced chemically-induced tumors.
