

Pex26 Cas9-KO Strategy

Designer: Huimin Su

Project Overview

Project Name

Pex26

Project type

Cas9-KO

Strain background

C57BL/6JGpt

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Pex26* gene. The schematic diagram is as follows:

- The *Pex26* gene has 6 transcripts. According to the structure of *Pex26* gene, exon2-exon4 of *Pex26-201* (ENSMUST00000088561.9) transcript is recommended as the knockout region. The region contains 596bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Pex26* gene. The brief process is as follows: CRISPR/Cas9 system

- The *Pex26* gene is located on the Chr6. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gene information (NCBI)

Pex26 peroxisomal biogenesis factor 26 [Mus musculus (house mouse)]

Gene ID: 74043, updated on 31-Jan-2019

Summary

Official Symbol	Pex26 provided by MGI
Official Full Name	peroxisomal biogenesis factor 26 provided by MGI
Primary source	MGI:MGI:1921293

Gene type	protein coding
RefSeq status	REVIEWED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	4632428M11Rik
Summary	This gene is a member of the peroxin-26 family. The encoded protein is probably required for protein import into peroxisomes. It may anchor Pex1 and Pex6 to peroxisome membranes. Defects in a similar gene in human are the cause of peroxisome biogenesis disorder complementation group 8 (PBD-CG8). PBD refers to a group of four disorders: Zellweger syndrome (ZWS), neonatal adrenoleukodystrophy (NALD), infantile Refsum disease (IRD), and classical rhizomelic chondrodysplasia punctata (RCDP). Alternatively spliced transcript variants have been identified for this gene. [provided by RefSeq, Feb 2015]
Expression	Ubiquitous expression in ovary adult (RPKM 8.2), kidney adult (RPKM 7.2) and 28 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

The gene has 6 transcripts,all transcripts are shown below:
