

Mul1 Cas9-CKO Strategy

Designer: Xueting Zhang

Design Date: 2019-7-22

Project Overview

Project Name

Mul1

Project type

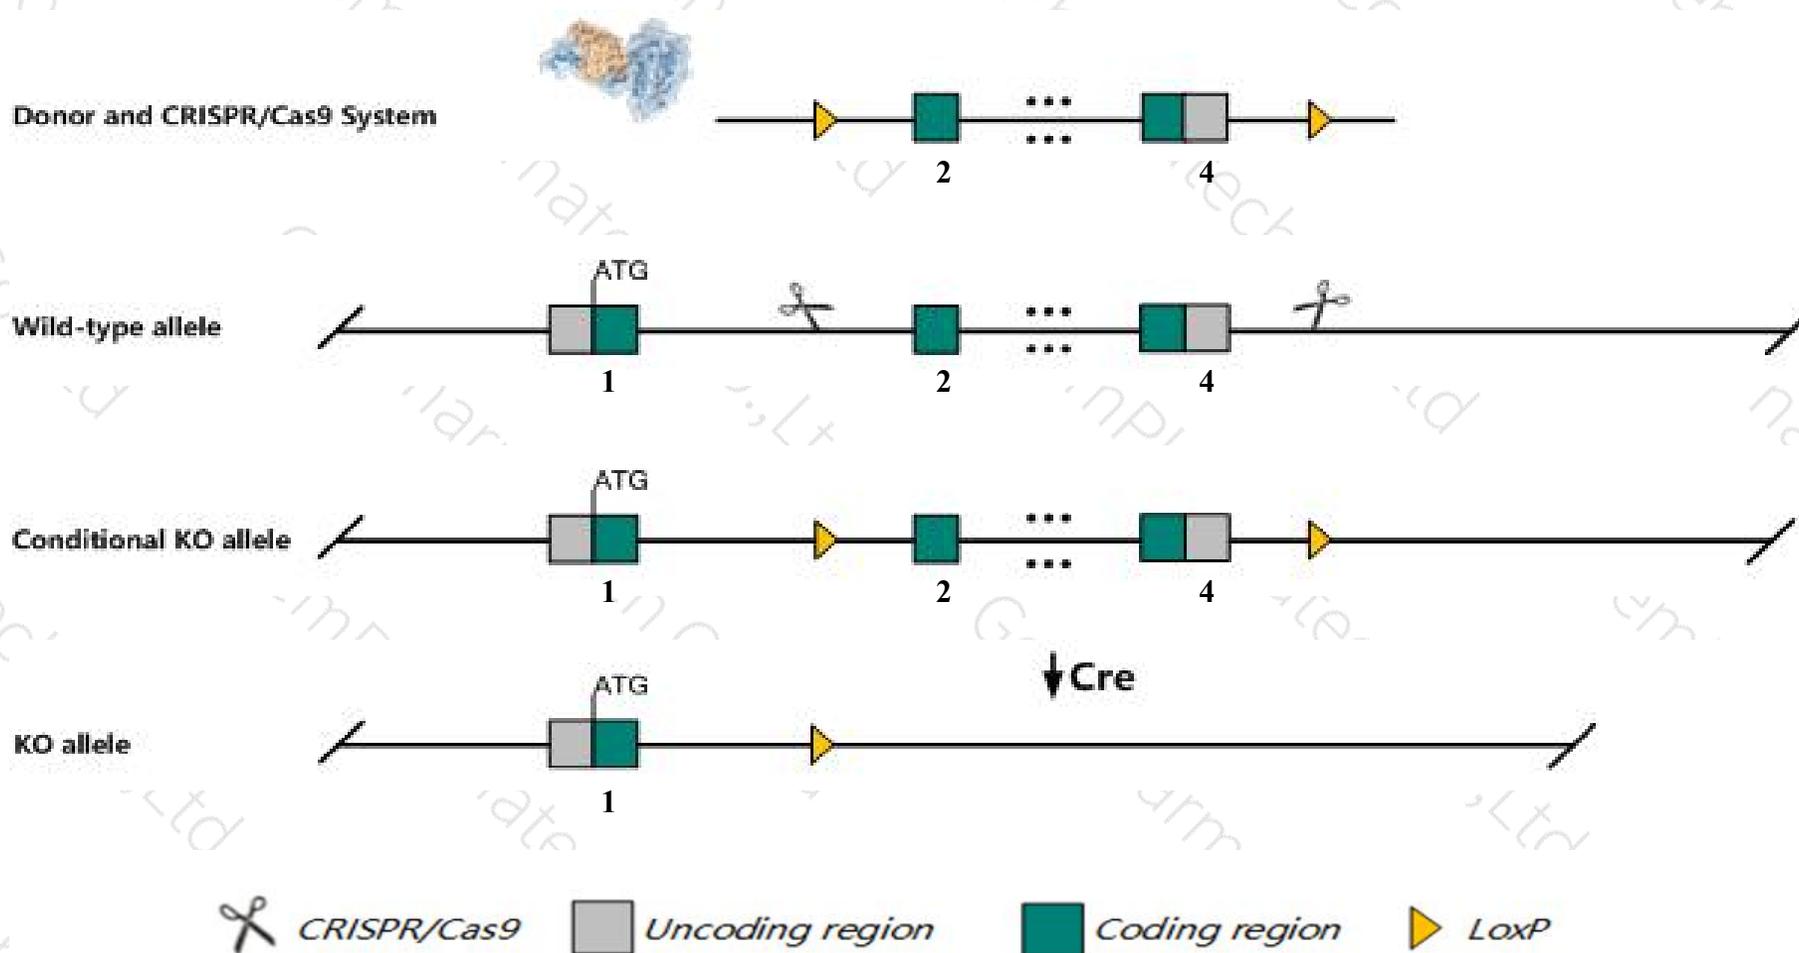

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Mull* gene. The schematic diagram is as follows:

- The *Mull* gene has 3 transcripts. According to the structure of *Mull* gene, exon2-exon4 of *Mull-201* (ENSMUST00000044058.10) transcript is recommended as the knockout region. The region contains most of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Mull* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- The *Mull* gene is located on the Chr4. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Mul1 mitochondrial ubiquitin ligase activator of NFKB 1 [Mus musculus (house mouse)]

Gene ID: 68350, updated on 5-Feb-2019

Summary

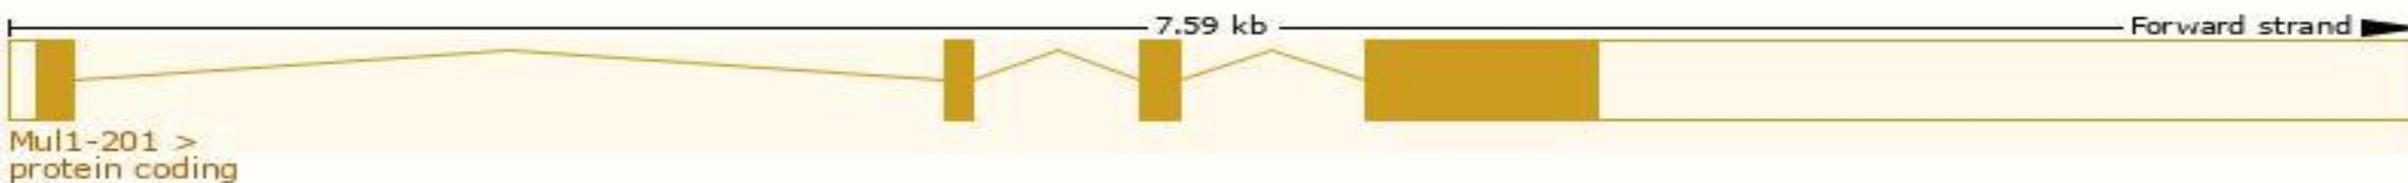

Official Symbol	Mul1 provided by MGI
Official Full Name	mitochondrial ubiquitin ligase activator of NFKB 1 provided by MGI
Primary source	MGI:MGI:1915600
See related	Ensembl:ENSMUSG00000041241
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	0610009K11Rik, AV000801, Gide
Expression	Ubiquitous expression in testis adult (RPKM 21.6), colon adult (RPKM 15.3) and 28 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

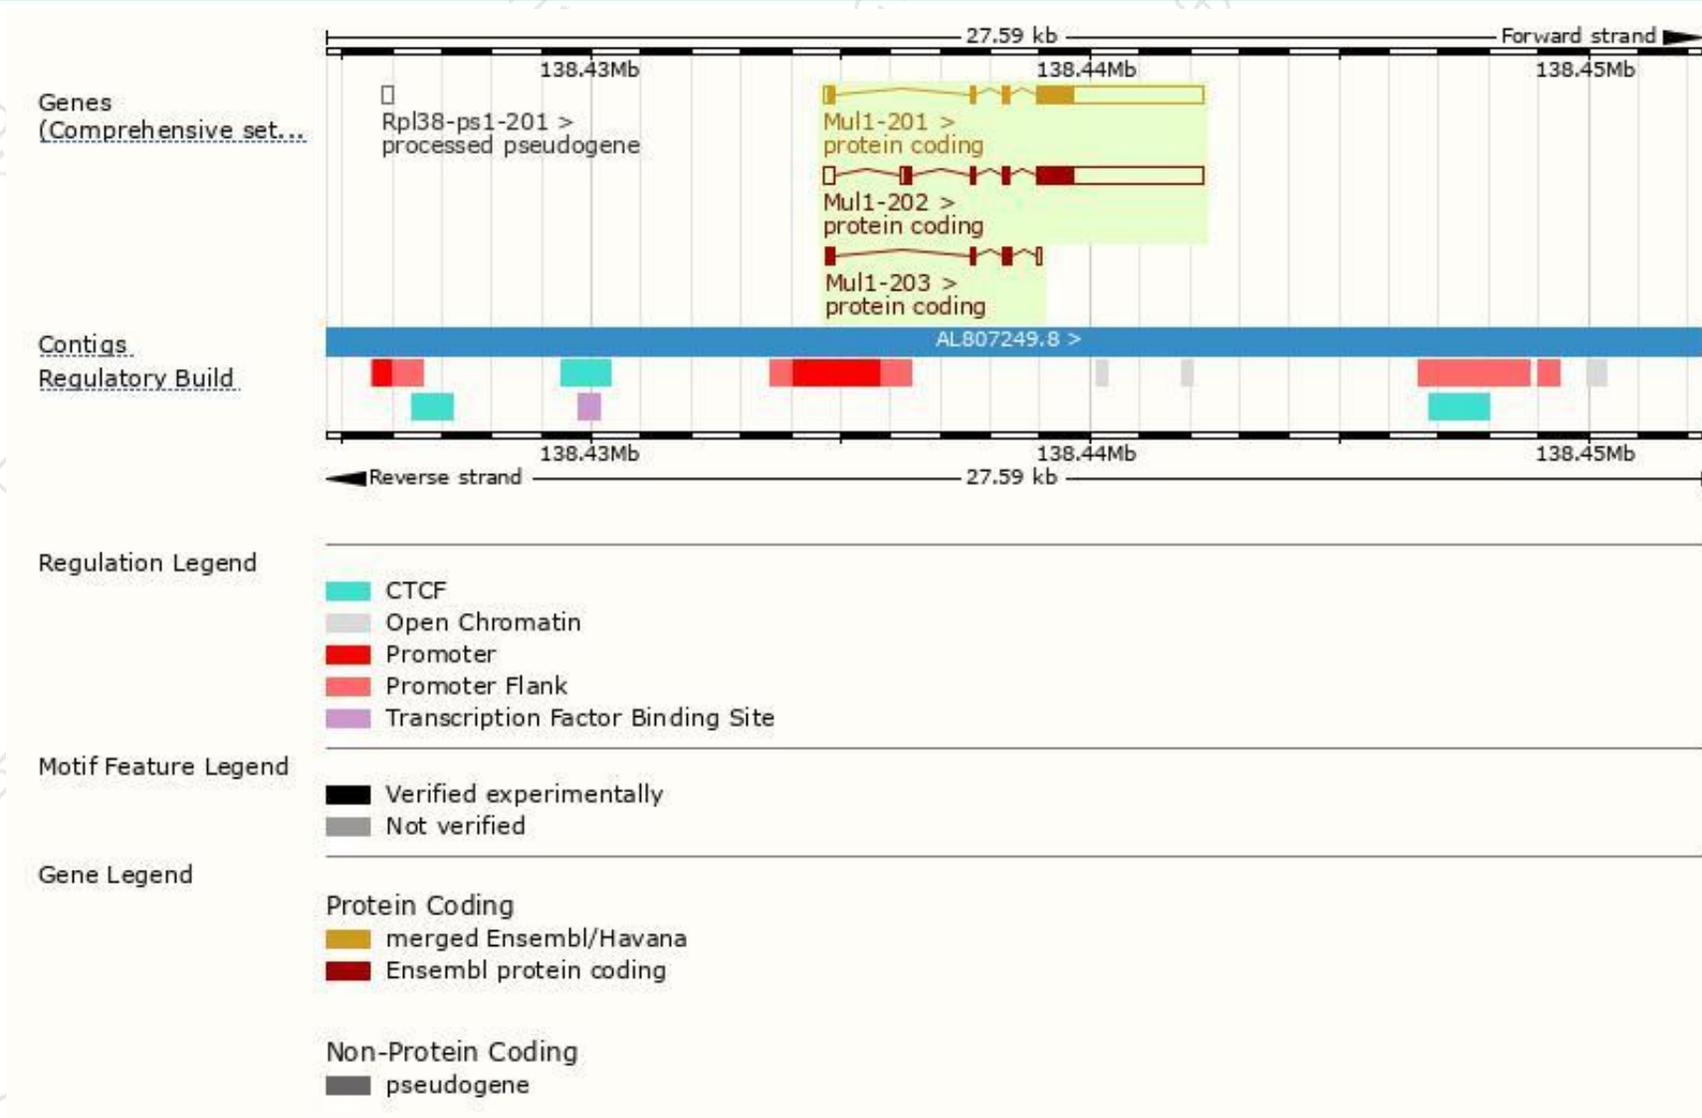

The gene has 3 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Mu1-201	ENSMUST00000044058.10	3733	352aa	Protein coding	CCDS18828	Q8VCM5	TSL:1 GENCODE basic APPRIS P1
Mu1-202	ENSMUST00000105813.7	3944	347aa	Protein coding	-	Q8VCM5	TSL:5 GENCODE basic
Mu1-203	ENSMUST00000105815.1	473	123aa	Protein coding	-	Q8VCM5	TSL:3 GENCODE basic

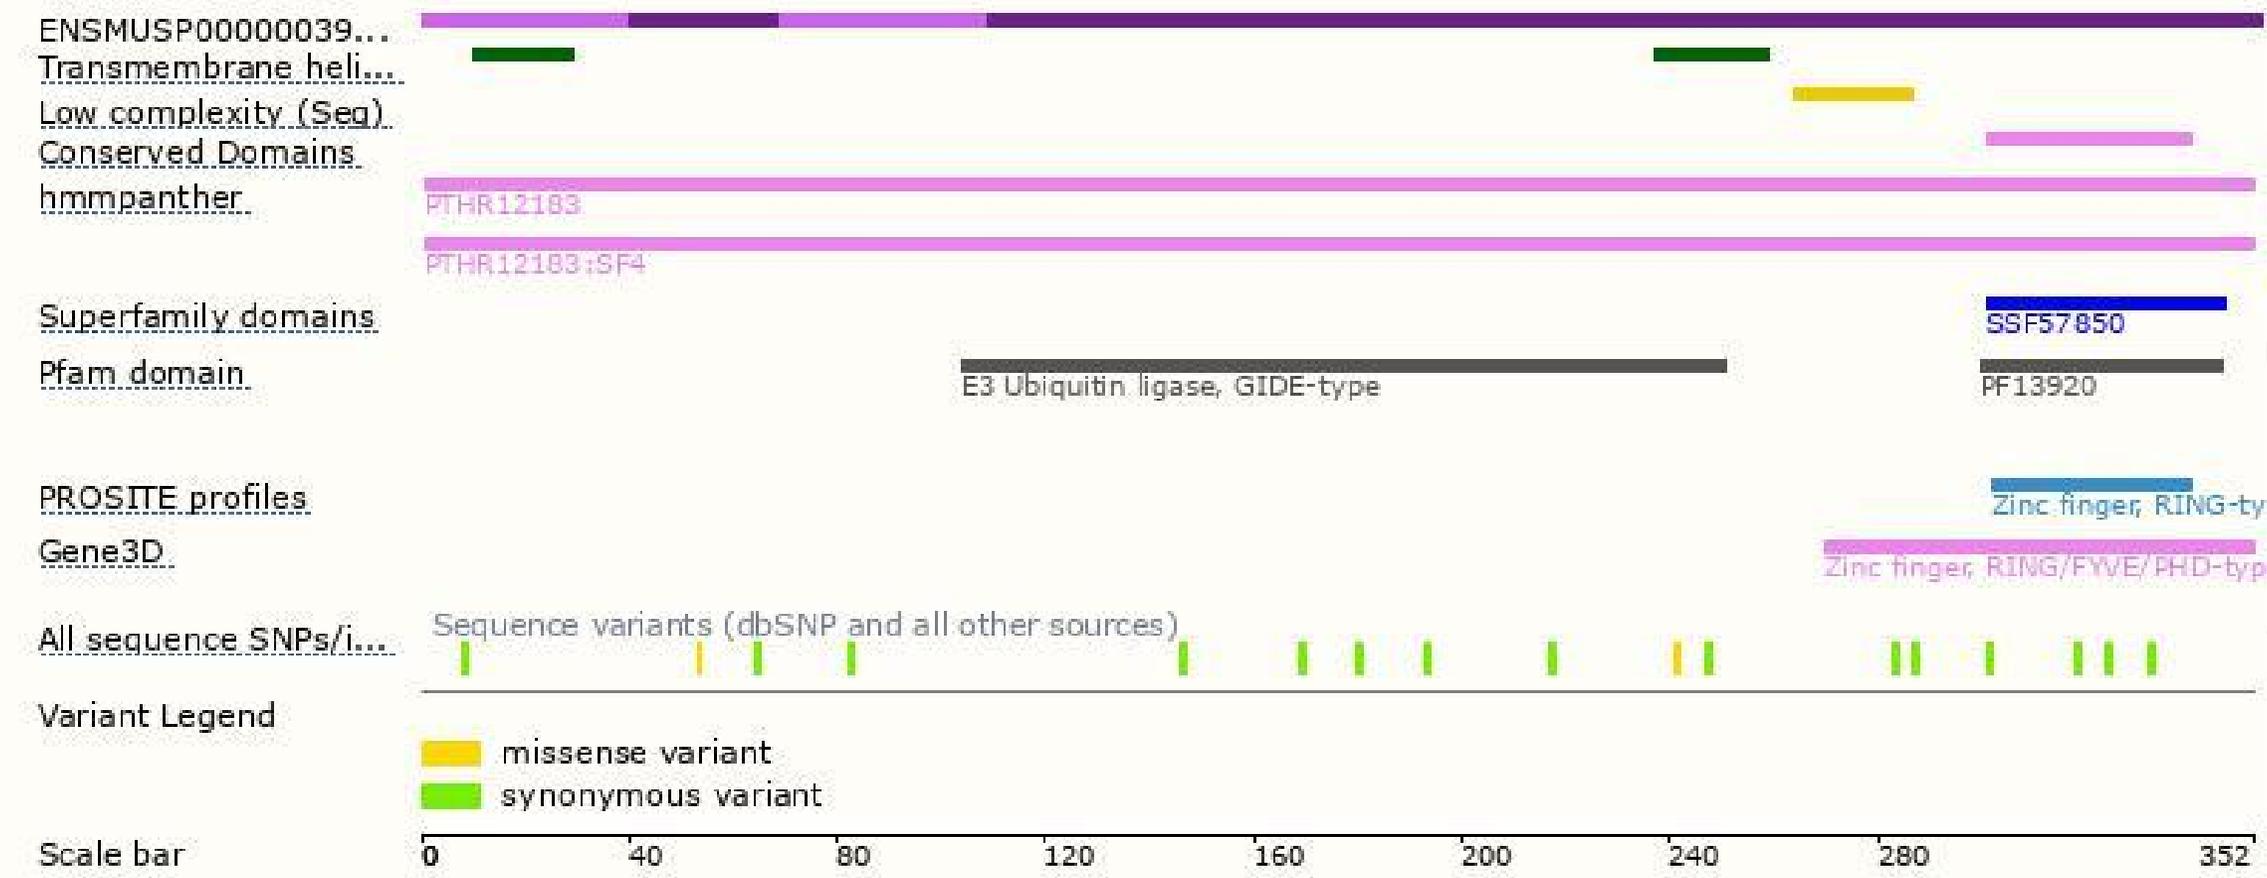

The strategy is based on the design of *Mu1-201* transcript, The transcription is shown below

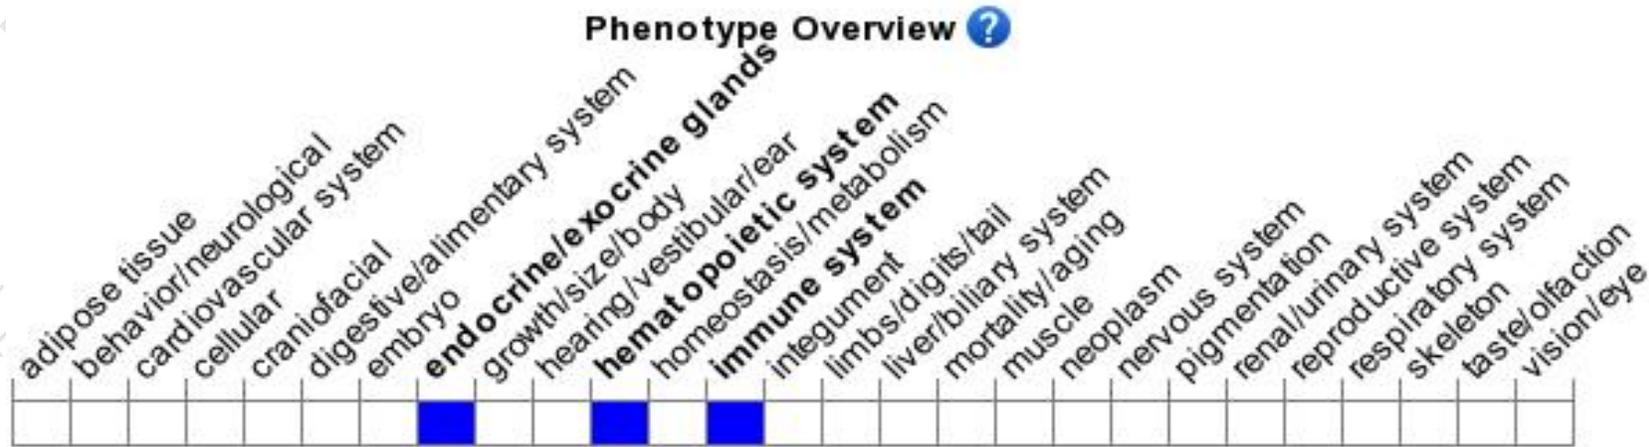

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).
