Project Overview

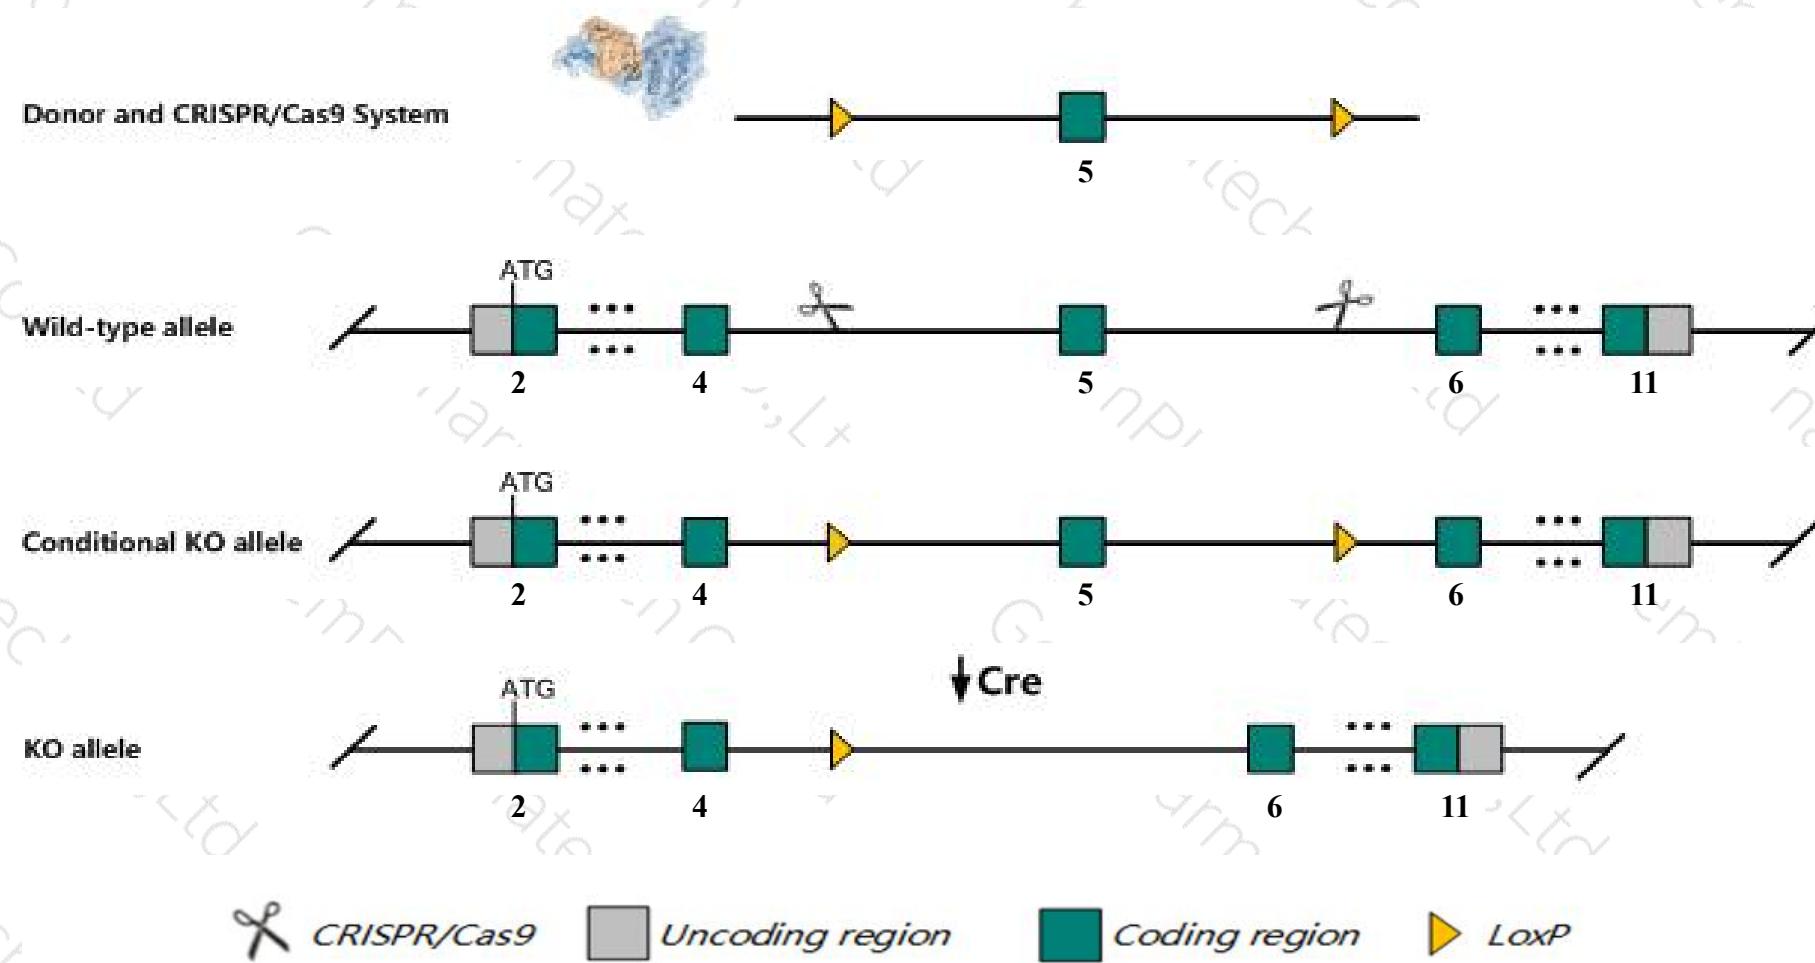

Project Name***Slc20a1***

Project type**Cas9-CKO**

Strain background**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Slc20a1* gene. The schematic diagram is as follows:

Technical routes

- The *Slc20a1* gene has 8 transcripts. According to the structure of *Slc20a1* gene, exon5 of *Slc20a1-201* (ENSMUST00000028880.9) transcript is recommended as the knockout region. The region contains 97bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Slc20a1* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Mice homozygous for a knock-out allele exhibit mid-gestation lethality associated with abnormal vitelline vasculature, growth retardation, and anemia.
- The *Slc20a1* gene is located on the Chr2. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Slc20a1 solute carrier family 20, member 1 [Mus musculus (house mouse)]

Gene ID: 20515, updated on 31-Jan-2019

Summary

Official Symbol Slc20a1 provided by [MGI](#)

Official Full Name solute carrier family 20, member 1 provided by [MGI](#)

Primary source [MGI:MGI:108392](#)

See related [Ensembl:ENSMUSG00000027397](#)

Gene type protein coding

RefSeq status VALIDATED

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as AI607883, Glvr-1, Glvr1

Expression Ubiquitous expression in colon adult (RPKM 22.0), frontal lobe adult (RPKM 18.6) and 27 other tissues [See more](#)

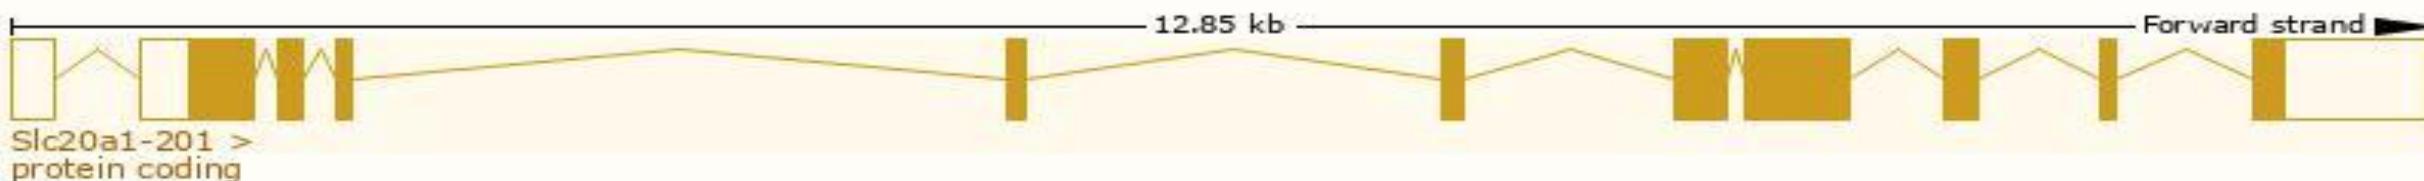

Orthologs [human](#) [all](#)

Transcript information (Ensembl)

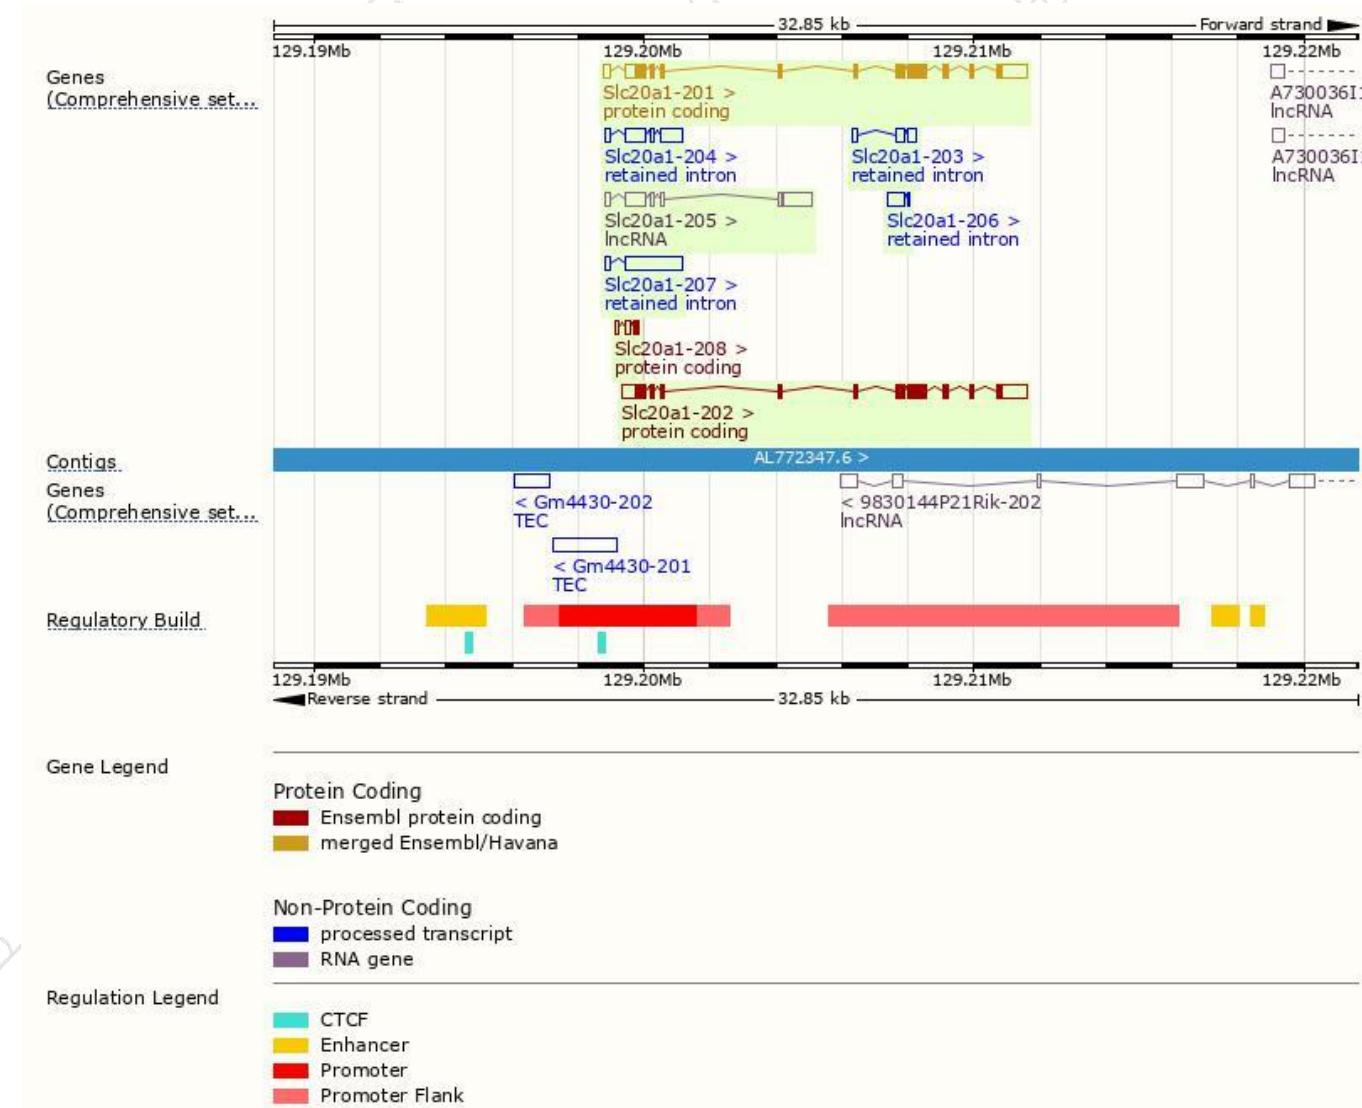

The gene has 8 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Slc20a1-201	ENSMUST00000028880.9	3316	681aa	Protein coding	CCDS16722	Q61609	TSL:1 GENCODE basic APPRIS P1
Slc20a1-202	ENSMUST00000110315.1	3219	681aa	Protein coding	CCDS16722	Q61609	TSL:1 GENCODE basic APPRIS P1
Slc20a1-208	ENSMUST00000148988.1	347	32aa	Protein coding	-	B0R035	CDS 3' incomplete TSL:3
Slc20a1-207	ENSMUST00000144744.7	1918	No protein	Retained intron	-	-	TSL:1
Slc20a1-204	ENSMUST00000140907.7	1628	No protein	Retained intron	-	-	TSL:1
Slc20a1-203	ENSMUST00000125714.1	712	No protein	Retained intron	-	-	TSL:2
Slc20a1-206	ENSMUST00000144025.1	552	No protein	Retained intron	-	-	TSL:3
Slc20a1-205	ENSMUST00000141285.1	1989	No protein	lncRNA	-	-	TSL:1

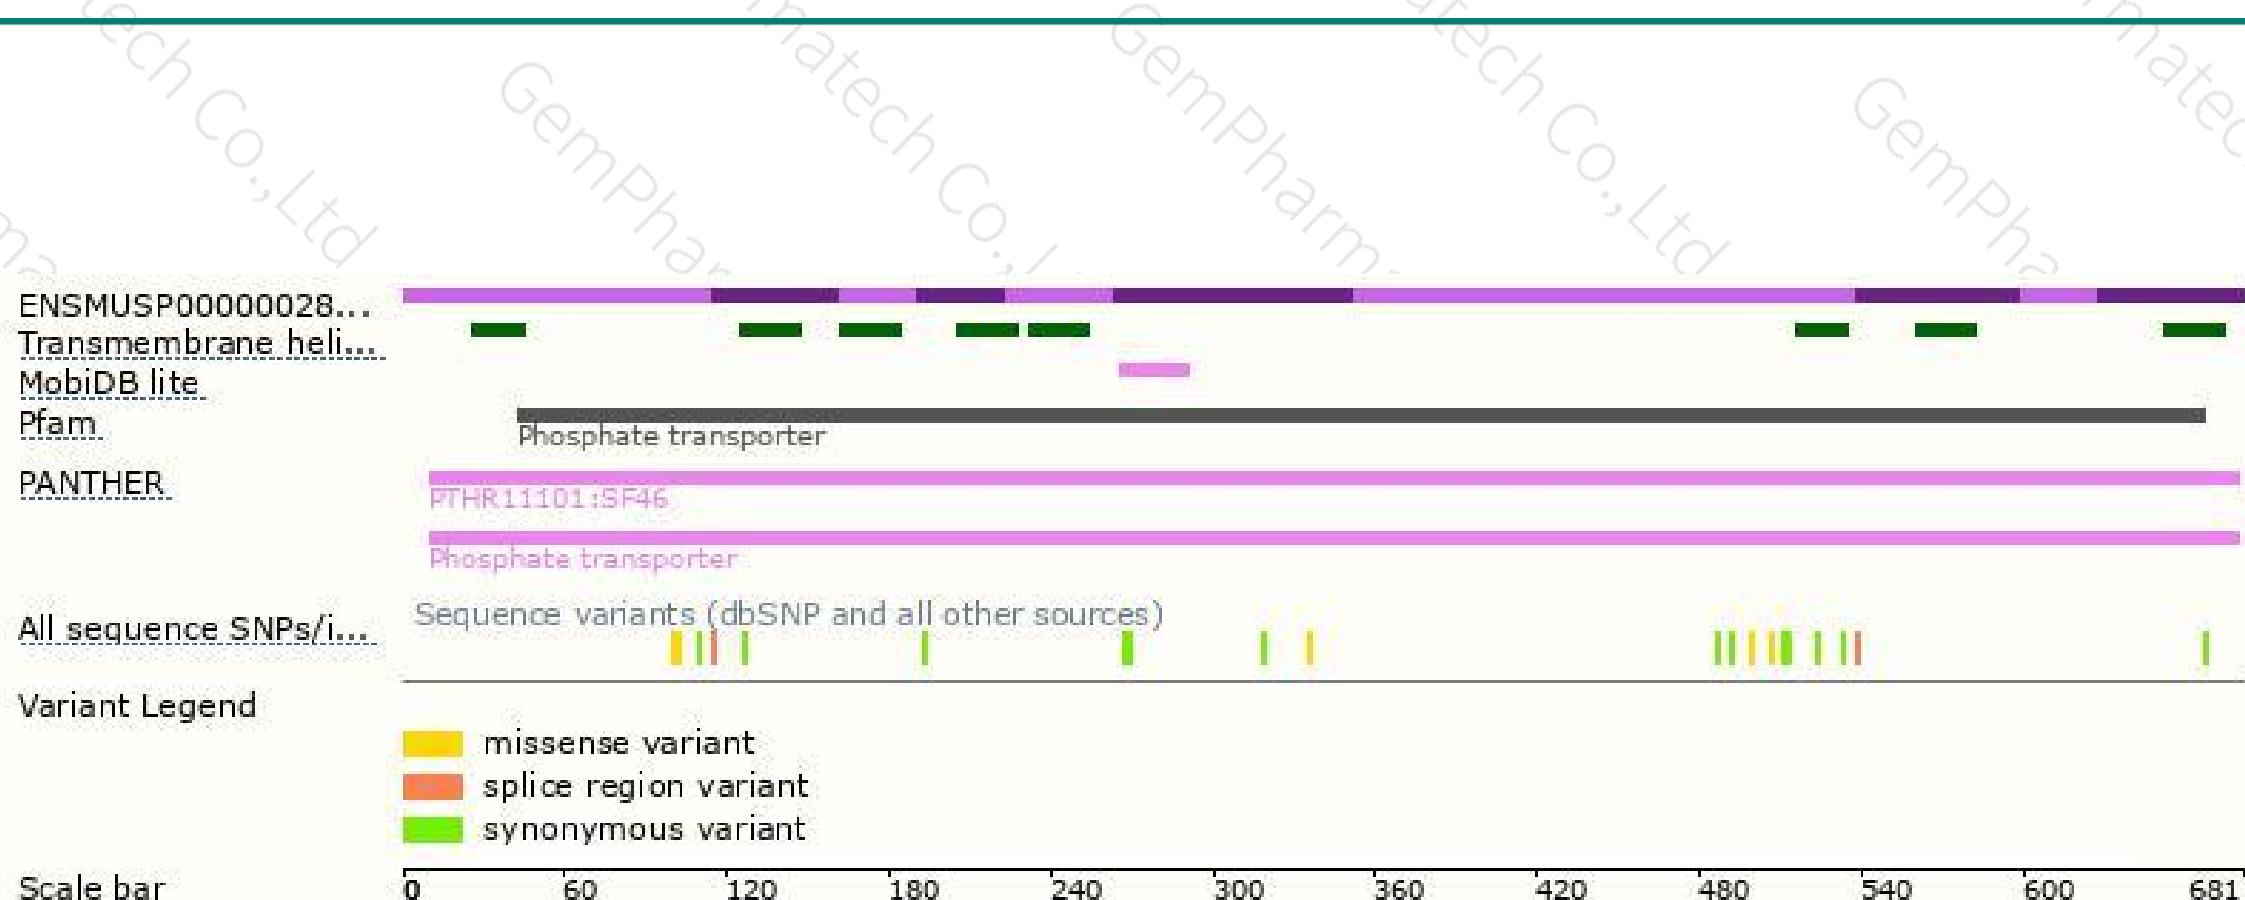

The strategy is based on the design of *Slc20a1-201* transcript, The transcription is shown below

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a knock-out allele exhibit mid-gestation lethality associated with abnormal vitelline vasculature, growth retardation, and anemia.
