

Tef Cas9-KO Strategy

Cemphamatech, Companyated Co Designer: Huimin Su

enphamatech,

Project Overview

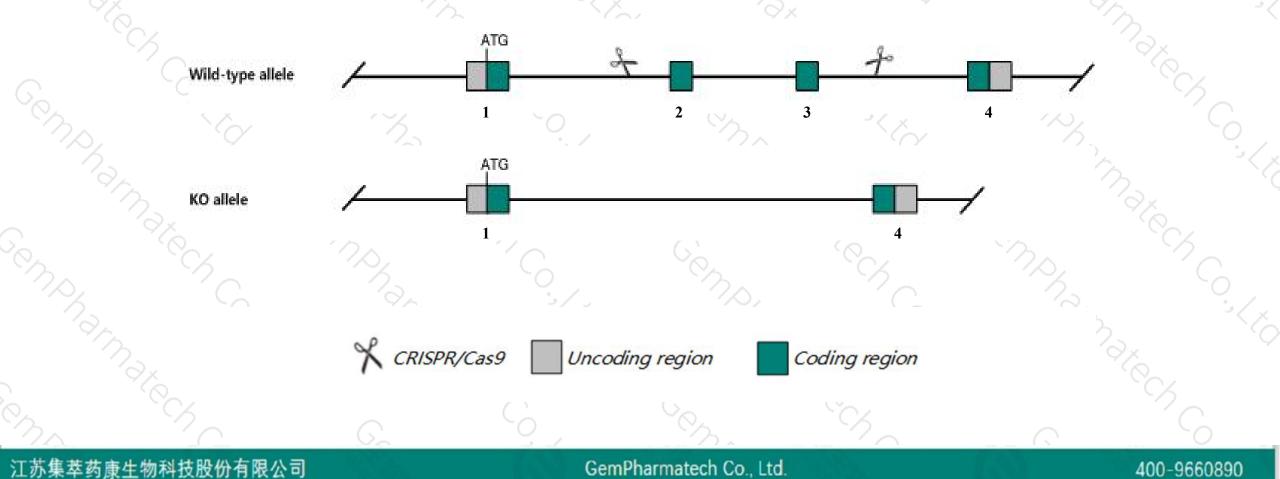

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Tef* gene. The schematic diagram is as follows:

- The *Tef* gene has 10 transcripts. According to the structure of *Tef* gene, exon2-exon3 of *Tef-202* (ENSMUST00000109553.9) transcript is recommended as the knockout region. The region contains 539bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Tef* gene. The brief process is as follows: gRNA was transcribed in vitro.Cas9 and gRNA were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

> According to the existing MGI data, Homozygous mutant are subject to seizures.

- The *Tef* gene is located on the Chr15. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of gene transcription and translation processes, all risks cannot be predicted under existing information.

Notice

Gene information (NCBI)

\$?

Tef thyrotroph embryonic factor [Mus musculus (house mouse)]

Gene ID: 21685, updated on 31-Jan-2019

Summary

Official Symbol	Tef provided by MGI
Official Full Name	thyrotroph embryonic factor provided by <u>MGI</u>
Primary source	MGI:MGI:98663
See related	Ensembl:ENSMUSG0000022389
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Also known as	2310028D20Rik
Expression	Broad expression in cortex adult (RPKM 46.8), bladder adult (RPKM 43.9) and 24 other tissues See more
Orthologs	human all

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, Homozygous mutant are subject to seizures.
