

Nefh Cas9-CKO Strategy

Designer:

JiaYu

Reviewer:

Xiaojing Li

Design Date:

2019-8-28

Project Overview

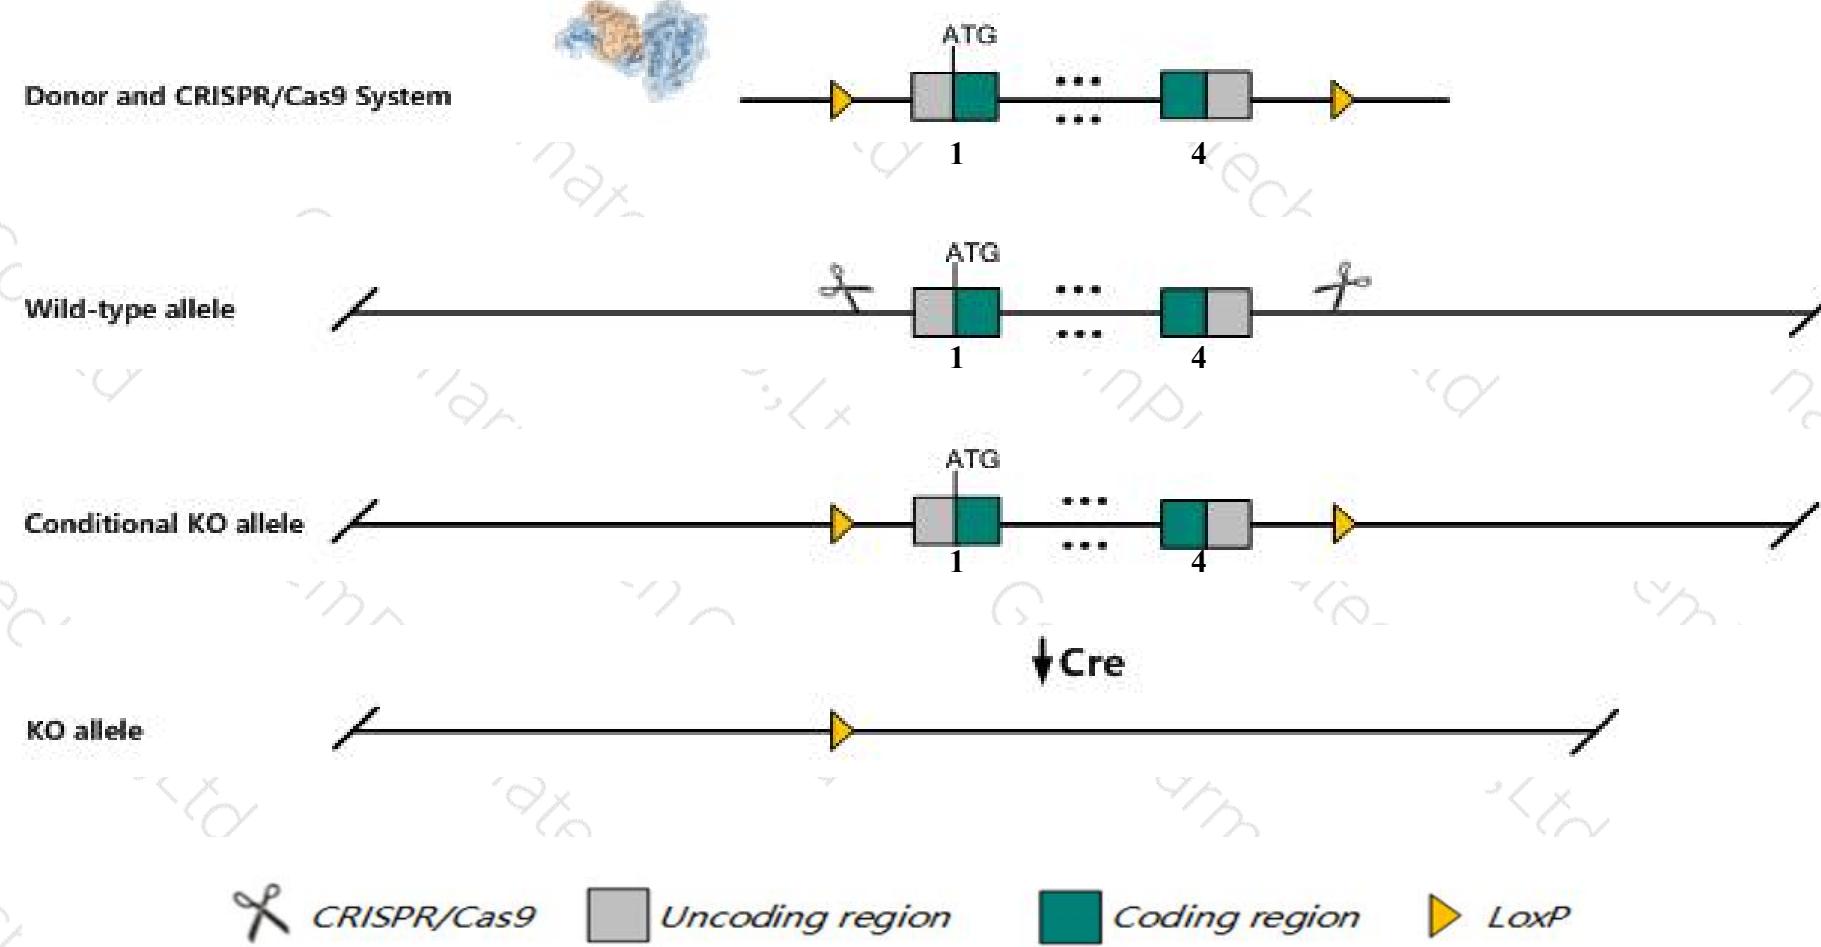

Project Name***Nefh***

Project type**Cas9-CKO**

Strain background**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Nefh* gene. The schematic diagram is as follows:

Technical routes

- The *Nefh* gene has 1 transcript. According to the structure of *Nefh* gene, exon1-exon4 of *Nefh-201* (ENSMUST00000093369.4) transcript is recommended as the knockout region. The region contains all of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Nefh* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Mice homozygous for a knock-out allele exhibit decreased axon diameter and transport.
- The *Nefh* gene is located on the Chr11. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Nefh neurofilament, heavy polypeptide [Mus musculus (house mouse)]

Gene ID: 380684, updated on 7-Apr-2019

Summary

Official Symbol Nefh provided by [MGI](#)

Official Full Name neurofilament, heavy polypeptide provided by [MGI](#)

Primary source [MGI:MGI:97309](#)

See related [Ensembl:ENSMUSG00000020396](#)

Gene type protein coding

RefSeq status VALIDATED

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as NF-H, NF200, Nfh, mKIAA0845

Expression Biased expression in cerebellum adult (RPKM 61.2), cortex adult (RPKM 8.9) and 1 other tissue [See more](#)

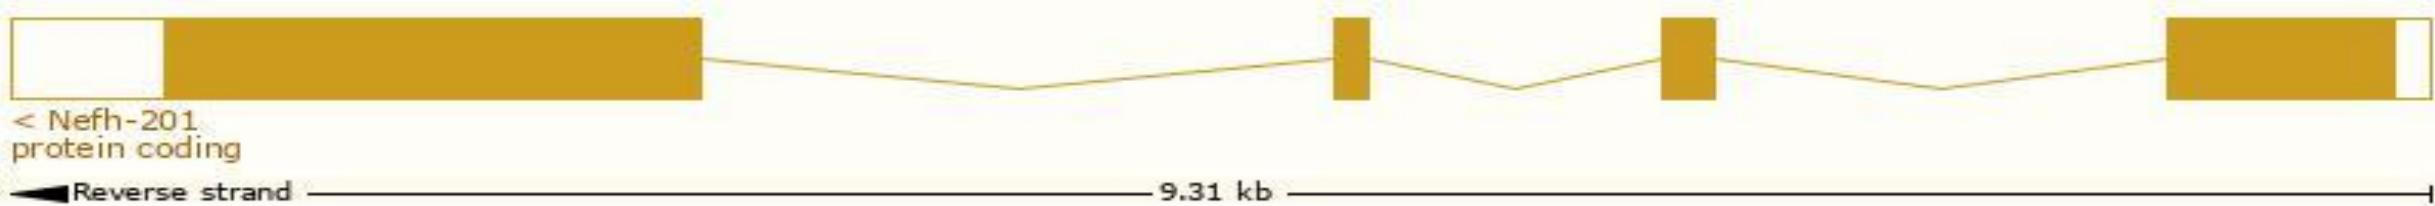

Orthologs [human](#) [all](#)

Transcript information (Ensembl)

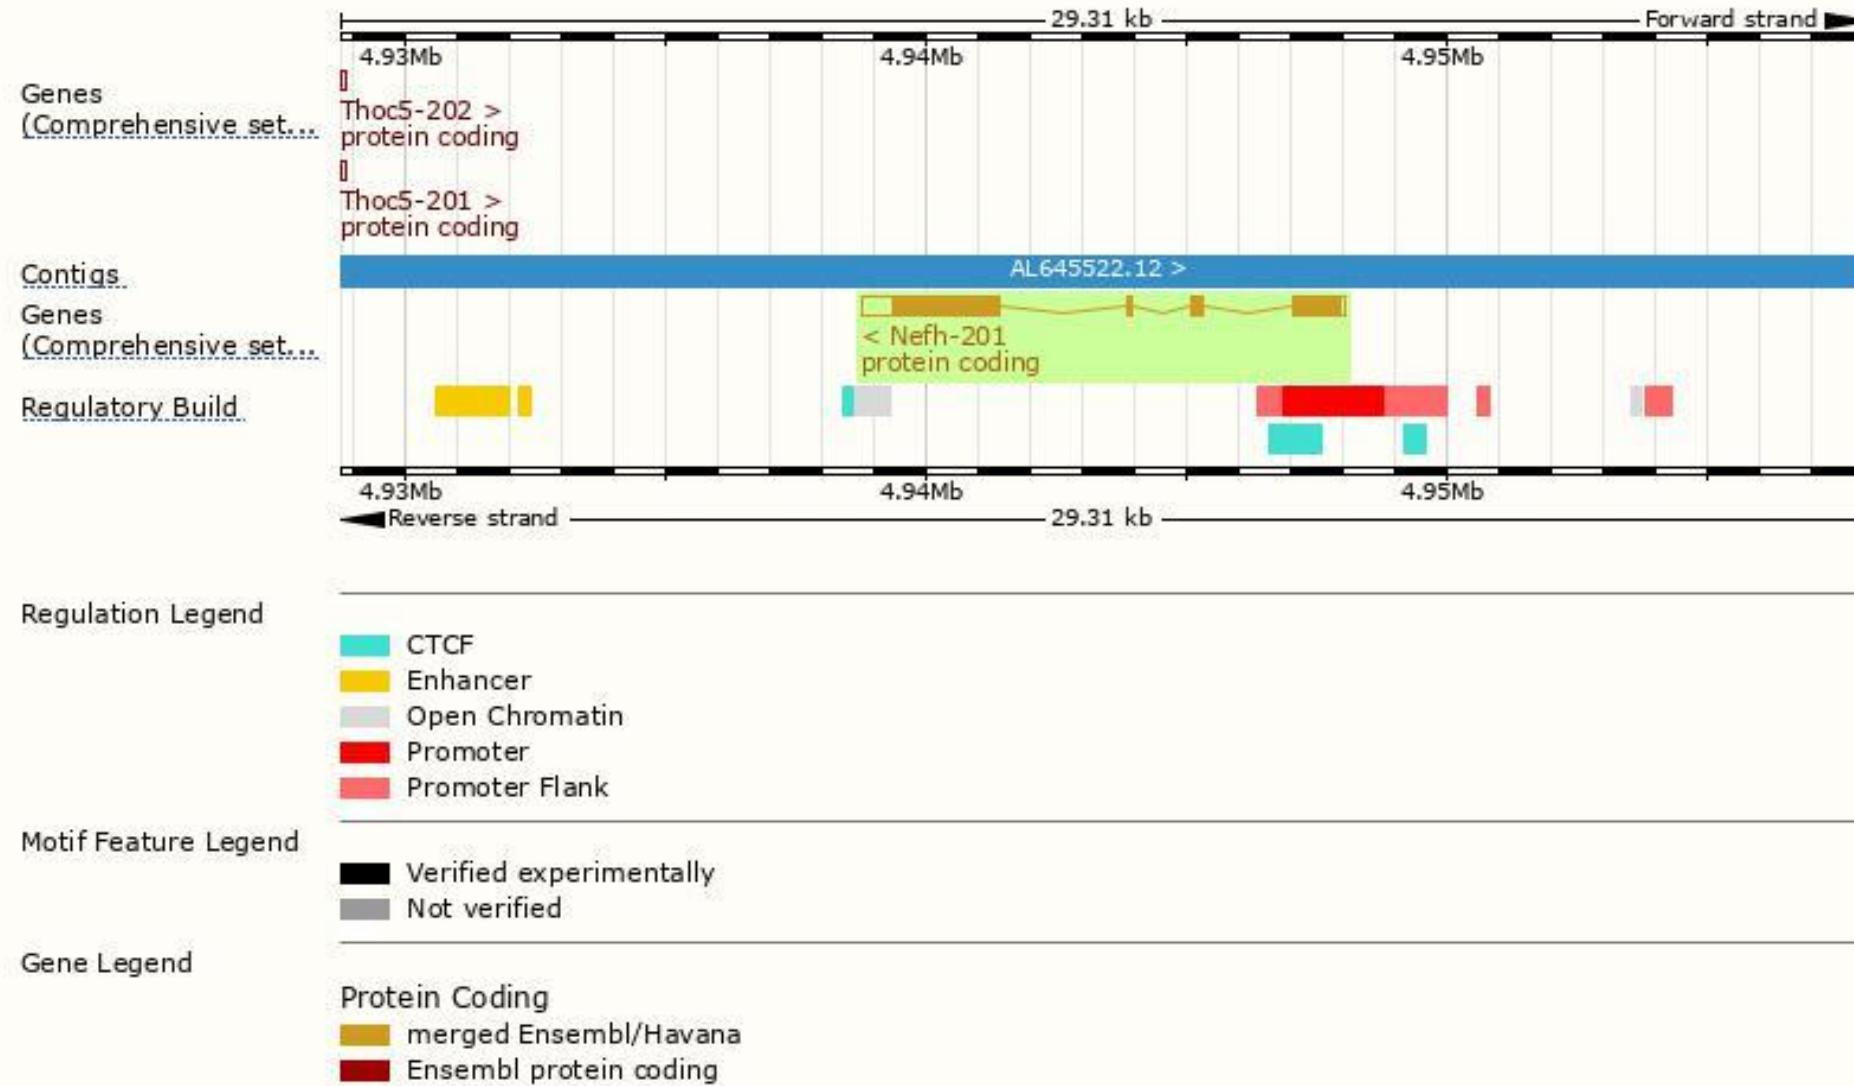

The gene has 1 transcript, and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Nefh-201	ENSMUST000000093369.4	3994	1090aa	Protein coding	CCDS360994	P19246	TSL:2 GENCODE basic APPRIS P1

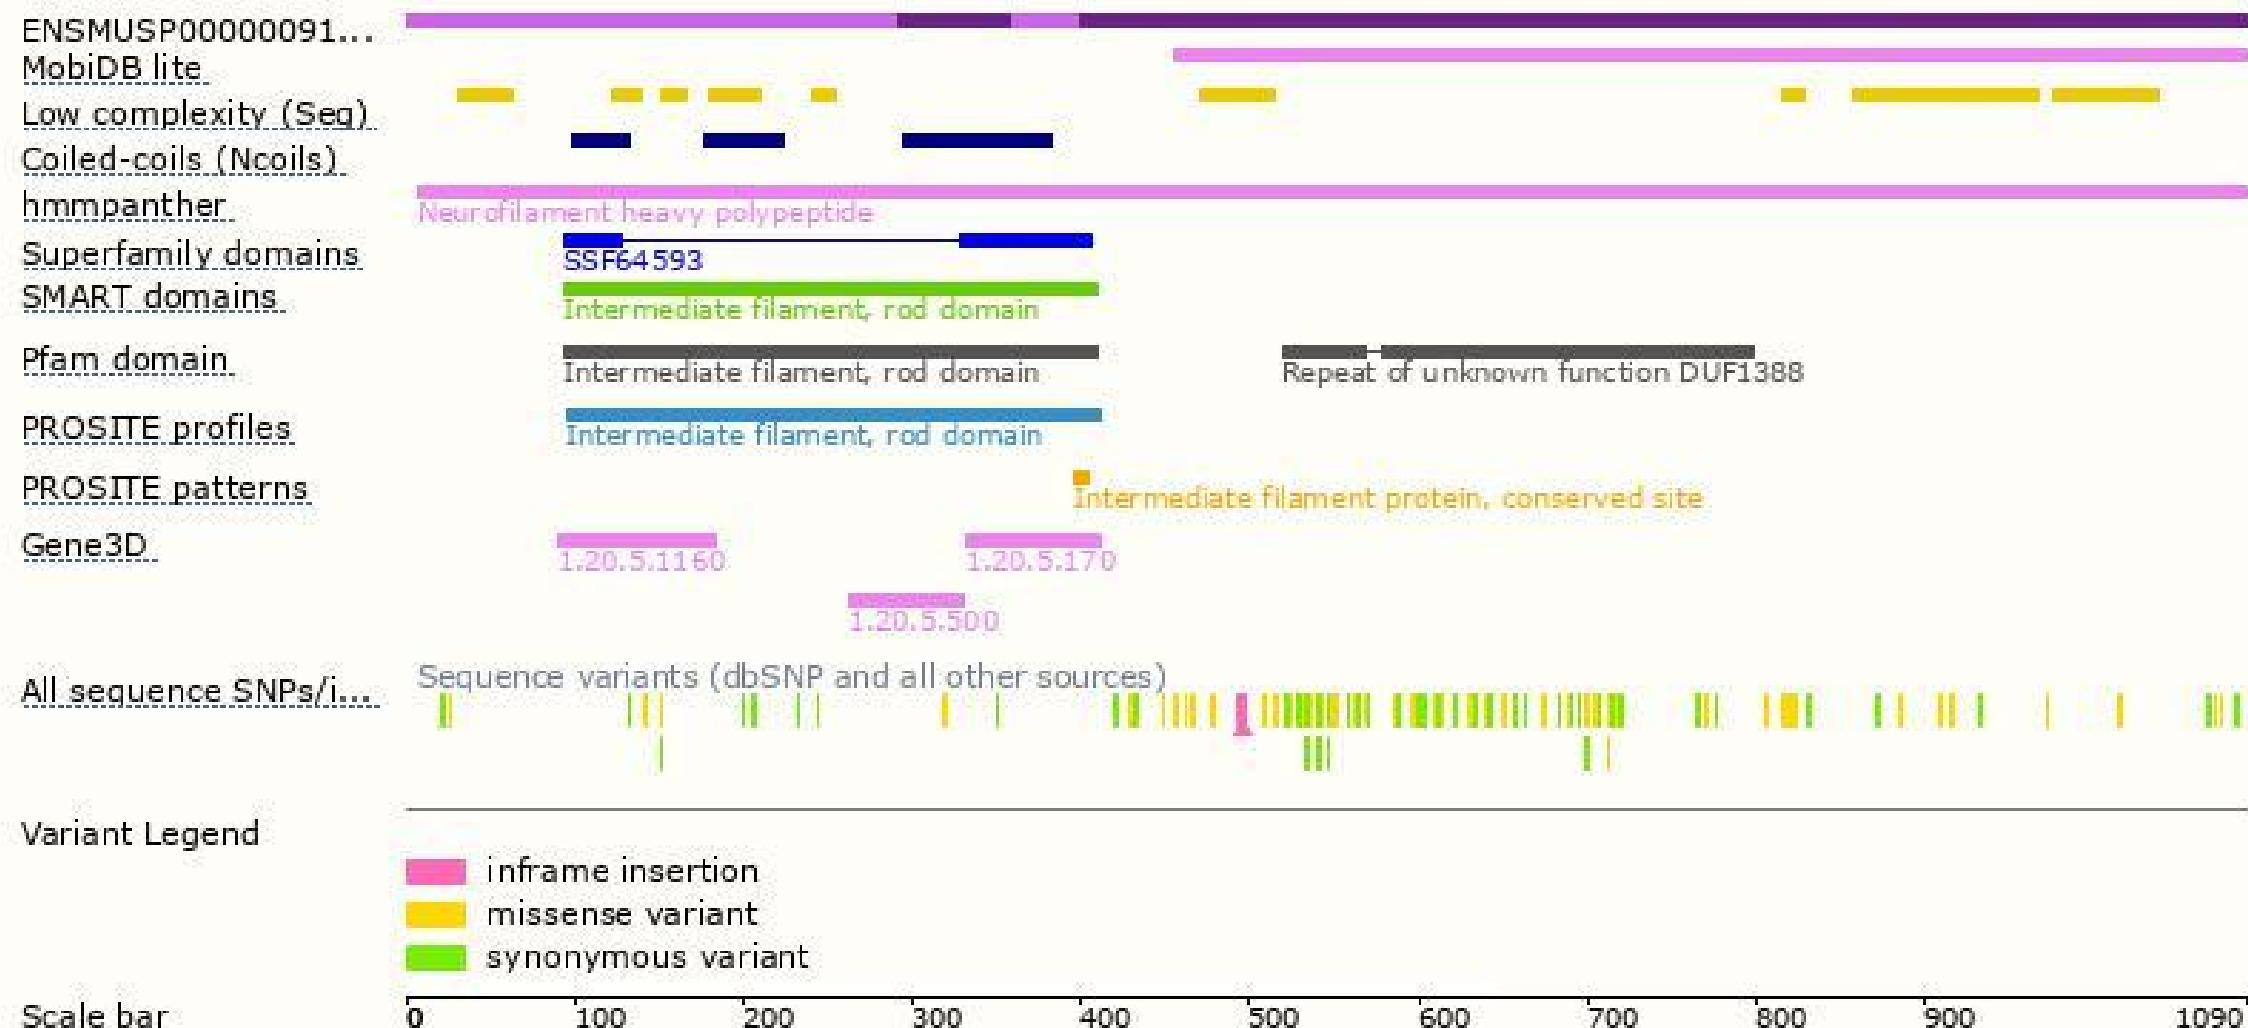

The strategy is based on the design of *Nefh-201* transcript. The transcription is shown below:

Genomic location distribution

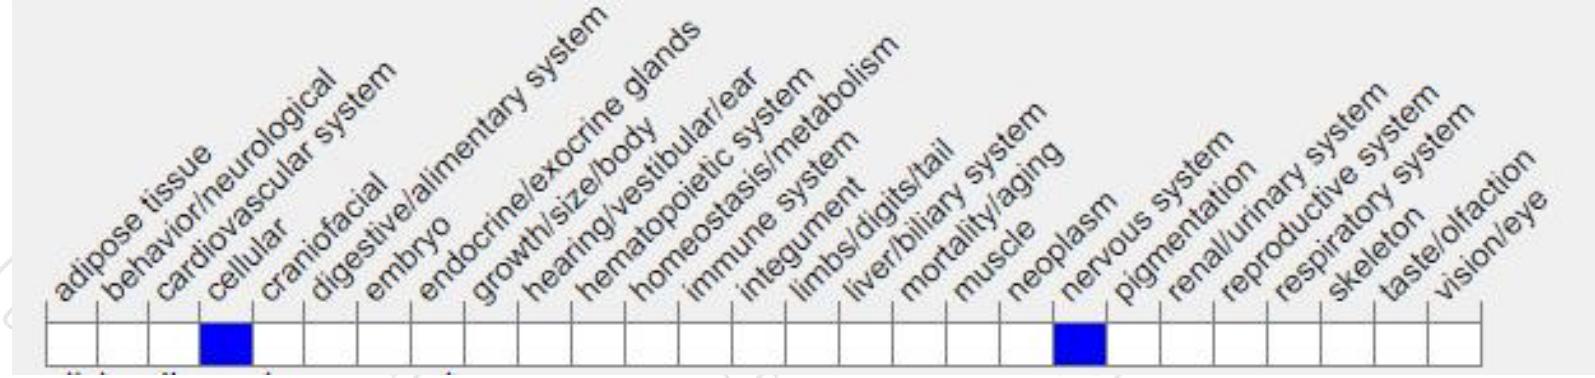

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a knock-out allele exhibit decreased axon diameter and transport.
