

# *Epha7 Cas9-CKO Strategy*

Designer:Xueling Zhang  
Reviewer:Yanhua Shen  
Design Date:2019-11-21

# Project Overview

---

**Project Name*****EphA7***

---

---

**Project type****Cas9-CKO**

---

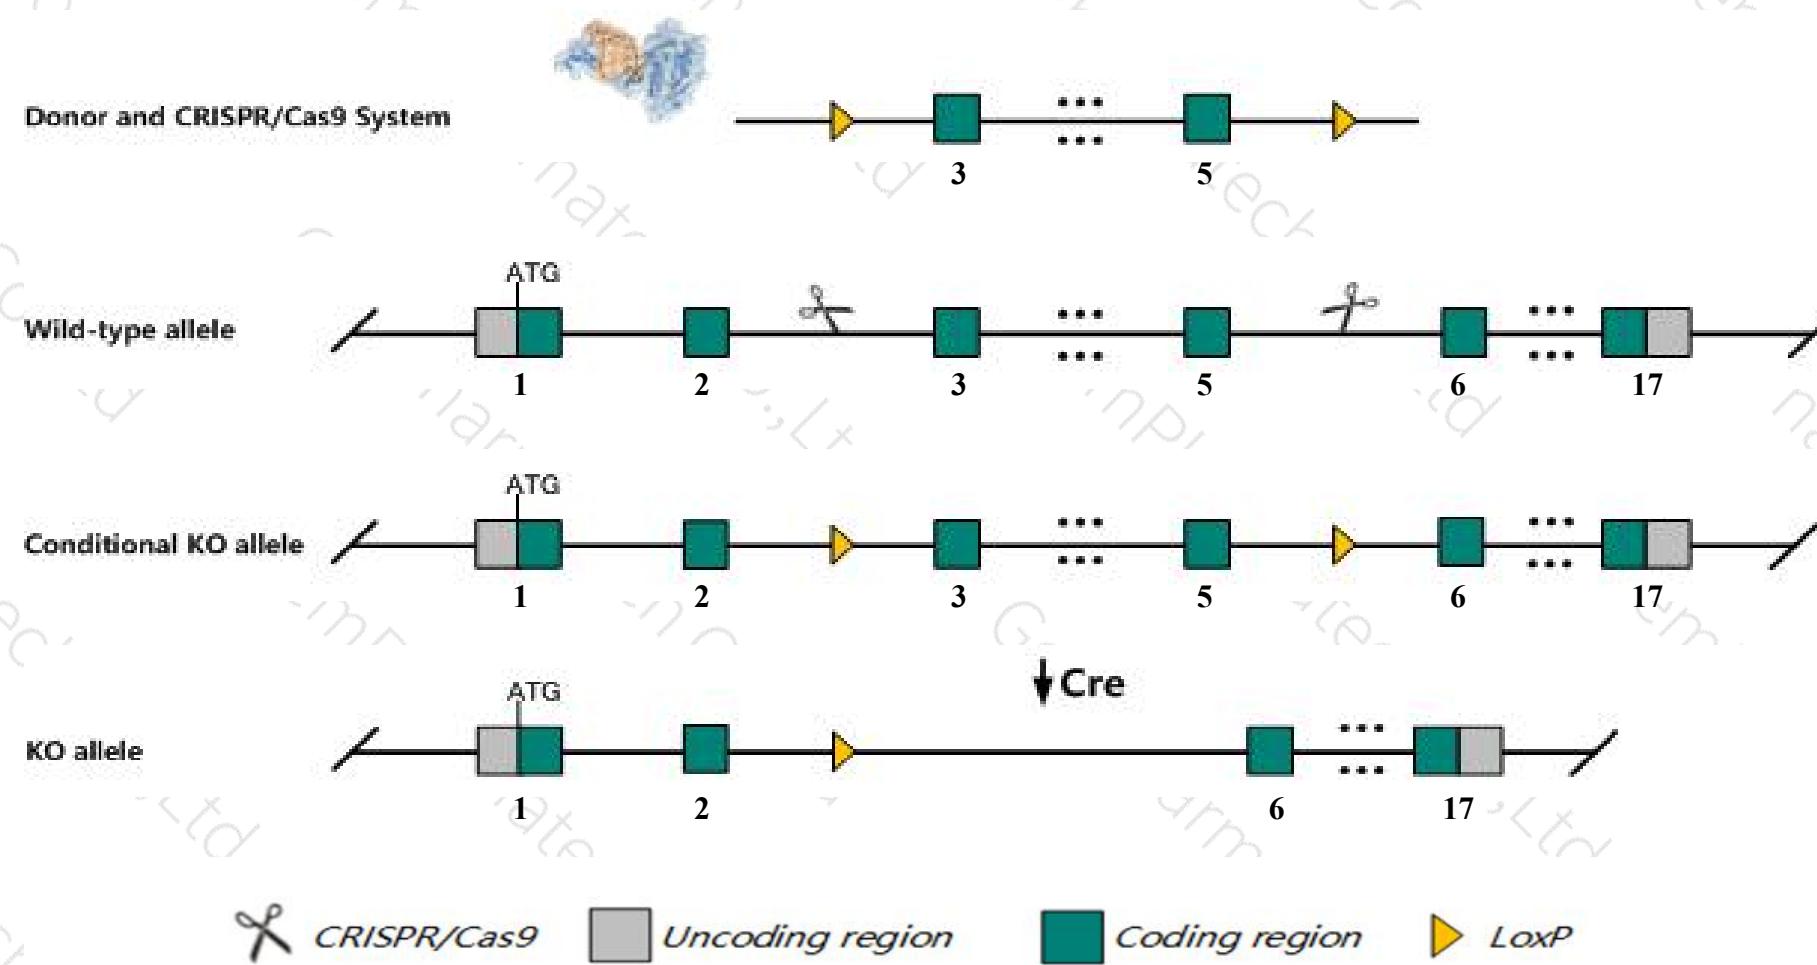

---

**Strain background****C57BL/6JGpt**

---

# Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Epha7* gene. The schematic diagram is as follows:

# Technical routes

- The *Epha7* gene has 8 transcripts. According to the structure of *Epha7* gene, exon3-exon5 of *Epha7-201* (ENSMUST00000029964.11) transcript is recommended as the knockout region. The region contains 1162bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Epha7* gene. The brief process is as follows:gRNA was transcribed in vitro, donor was constructed.Cas9, gRNA and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

GemPharmatech

# Notice

- According to the existing MGI data, Some homozygous mutants display anencephaly. Mutants also exhibit increased proliferation of neural progenitor cells in the lateral ventricle wall of the adult brain.
- The floxed region is near to the N-terminal of *Gm11915* gene, this strategy may influence the regulatory function of the N-terminal of *Gm11915* gene.
- The *Epha7* gene is located on the Chr4. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

## Epha7 Eph receptor A7 [*Mus musculus* (house mouse)]

Gene ID: 13841, updated on 3-Sep-2019

### Summary

Official Symbol Epha7 provided by [MGI](#)

Official Full Name Eph receptor A7 provided by [MGI](#)

Primary source [MGI:MGI:95276](#)

See related [Ensembl:ENSMUSG00000028289](#)

Gene type protein coding

RefSeq status VALIDATED

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; [Mus](#); [Mus](#)

Also known as Ebk; Ehk3; Mdk1; Cek11; Hek11

Expression Biased expression in CNS E18 (RPKM 6.7), CNS E11.5 (RPKM 6.2) and 10 other tissues [See more](#)

Orthologs [human](#) [all](#)

### Genomic context

Location: 4 A4; 4 12.42 cM

[See EphA7 in Genome Data Viewer](#)

Exon count: 20

Epha7-206	<a href="#">ENSMUST00000129912.1</a>	648	No protein	lncRNA	-	-	TSL:3
Epha7-207	<a href="#">ENSMUST00000136827.1</a>	648	No protein	lncRNA	-	-	TSL:3

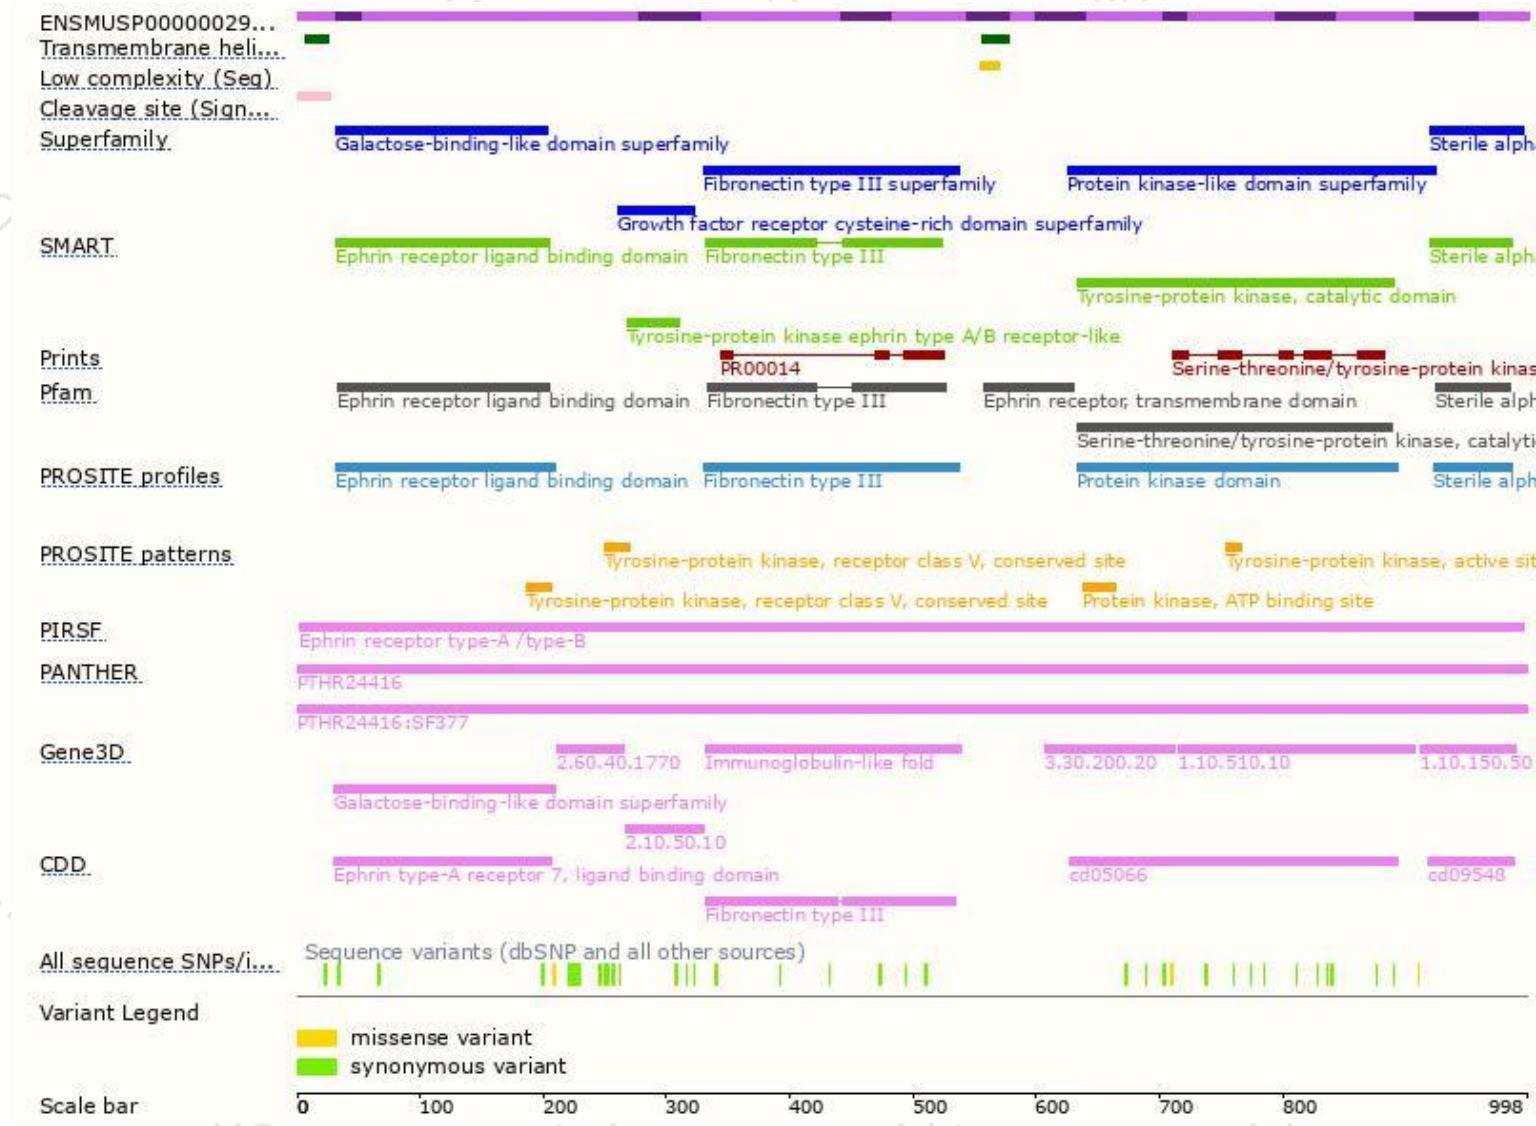

The strategy is based on the design of *Epha7-201* transcript, The transcription is shown below

# Genomic location distribution

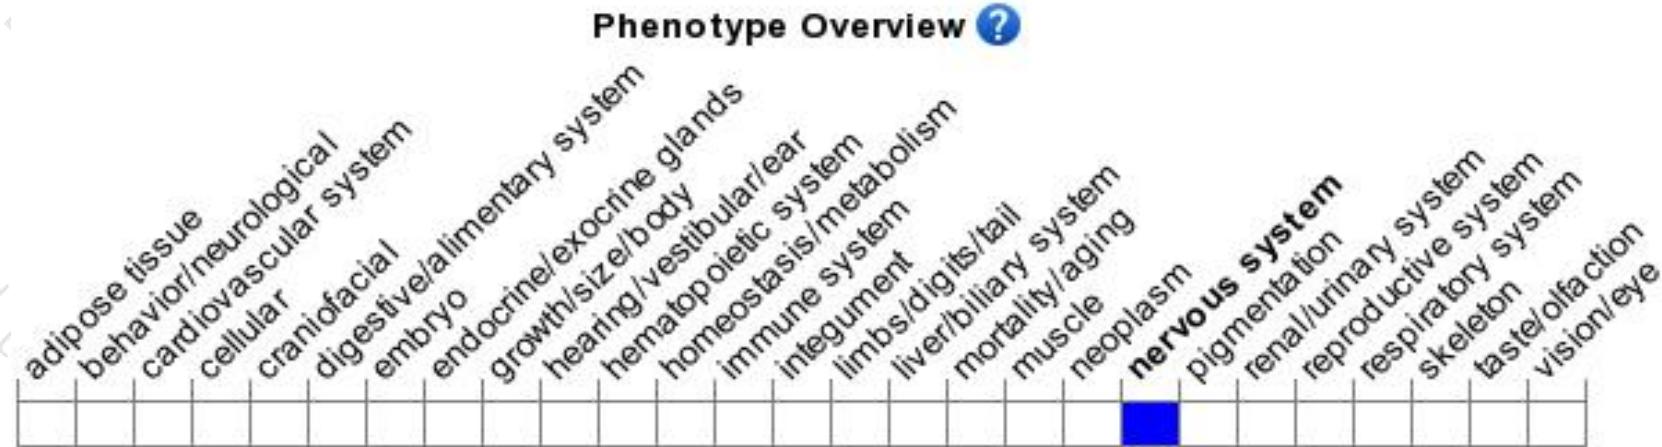

# Protein domain

集萃药康  
GemPharmatech

# Mouse phenotype description(MGI)

*Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).*

According to the existing MGI data, Some homozygous mutants display anencephaly. Mutants also exhibit increased proliferation of neural progenitor cells in the lateral ventricle wall of the adult brain.
