

Epha6 Cas9-CKO Strategy

Designer:

Daohua Xu

Reviewer:

Huimin Su

Design Date:

2020-2-14

Project Overview

Project Name

Epha6

Project type

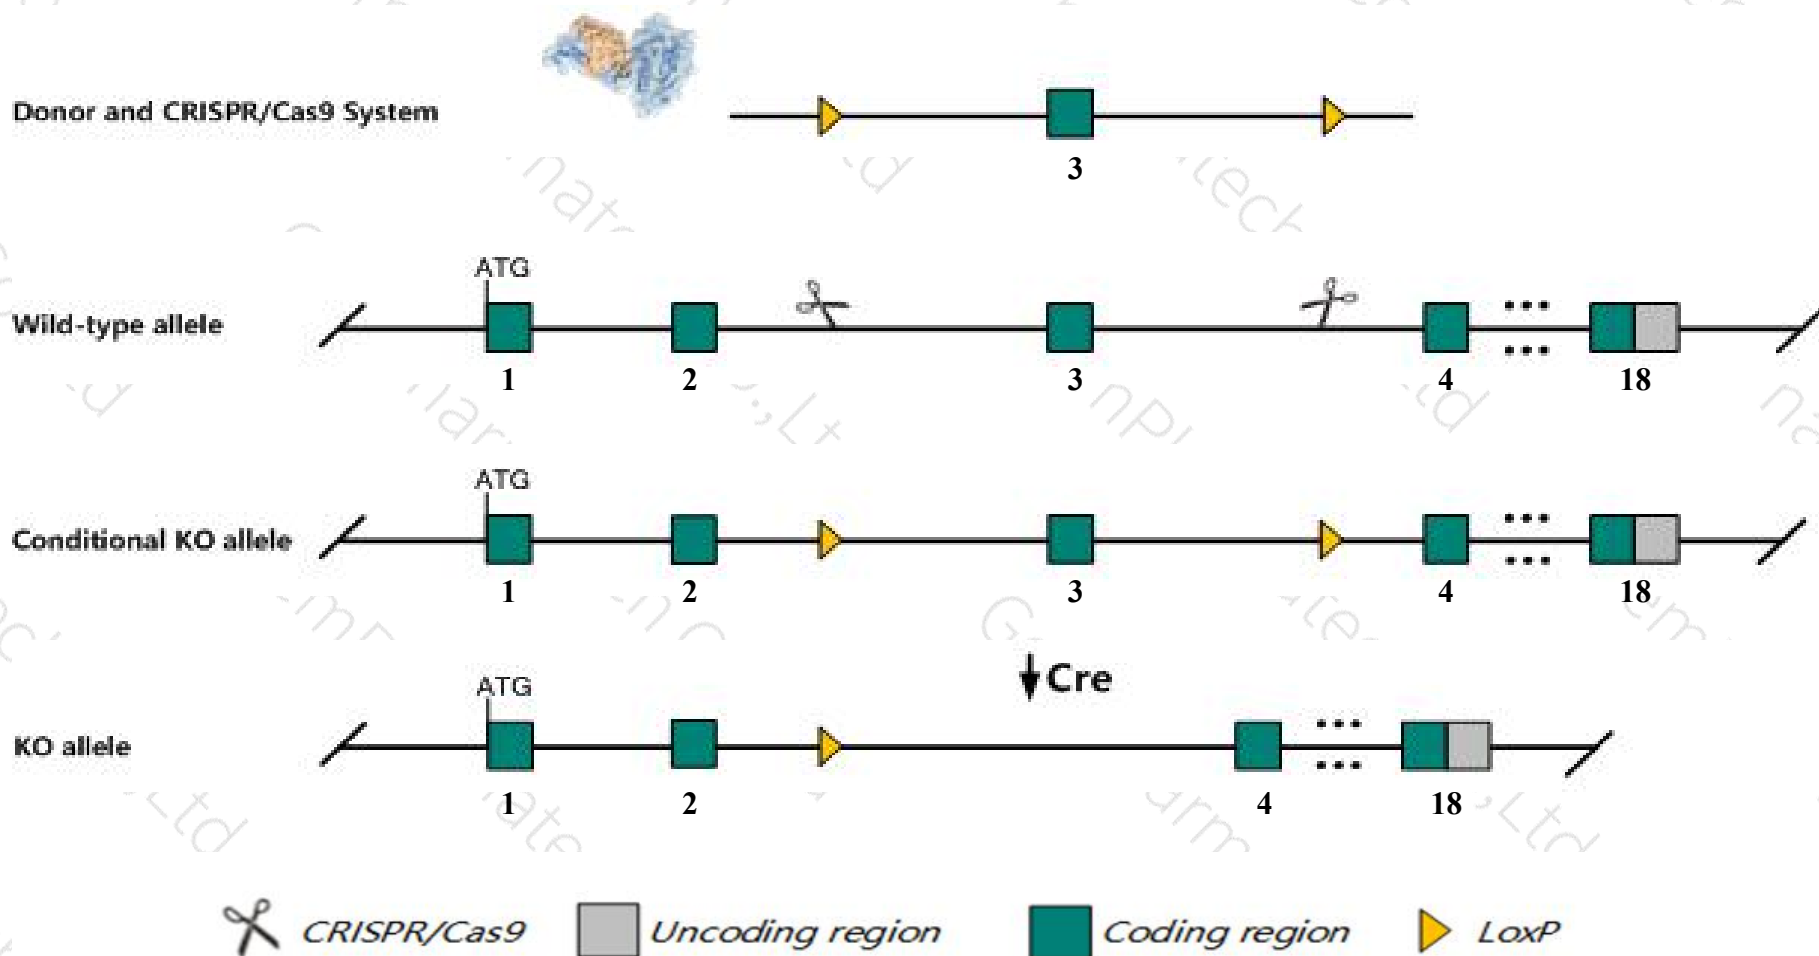

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Epha6* gene. The schematic diagram is as follows:

Technical routes

- The *Epha6* gene has 4 transcripts. According to the structure of *Epha6* gene, exon3 of *Epha6-201* (ENSMUST00000068860.12) transcript is recommended as the knockout region. The region contains 664bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Epha6* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, Mice homozygous for a knock-out allele display discrete learning and memory deficits.
- The *Epha6* gene is located on the Chr16. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Epha6 Eph receptor A6 [Mus musculus (house mouse)]

Gene ID: 13840, updated on 31-Jan-2019

Summary

Official Symbol	Epha6 provided by MGI
Official Full Name	Eph receptor A6 provided by MGI
Primary source	MGI:MGI:108034
See related	Ensembl:ENSMUSG00000055540
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	Ehk2, Hek12, m-ehk2
Expression	Biased expression in frontal lobe adult (RPKM 1.8), cortex adult (RPKM 1.3) and 5 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

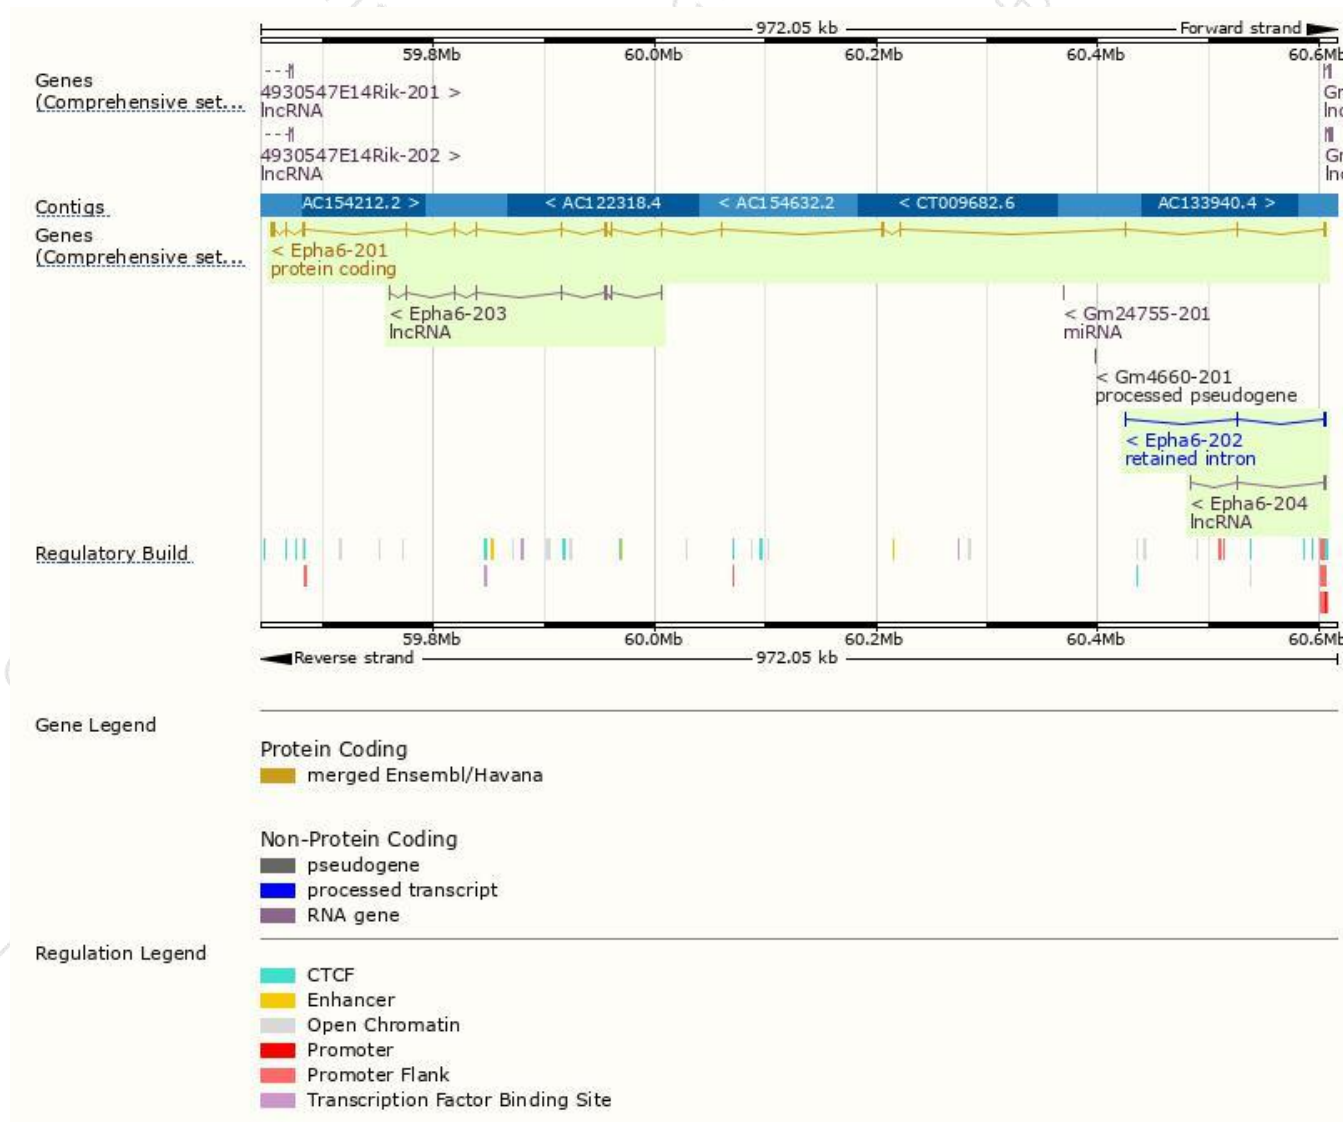

The gene has 4 transcripts,all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Epha6-201	ENSMUST00000068860.12	3930	1130aa	Protein coding	CCDS28260	G1K381	TSL:1 GENCODE basic APPRIS P1
Epha6-202	ENSMUST00000159383.7	1856	No protein	Retained intron	-	-	TSL:1
Epha6-203	ENSMUST00000161358.1	1356	No protein	lncRNA	-	-	TSL:1
Epha6-204	ENSMUST00000162129.1	735	No protein	lncRNA	-	-	TSL:3

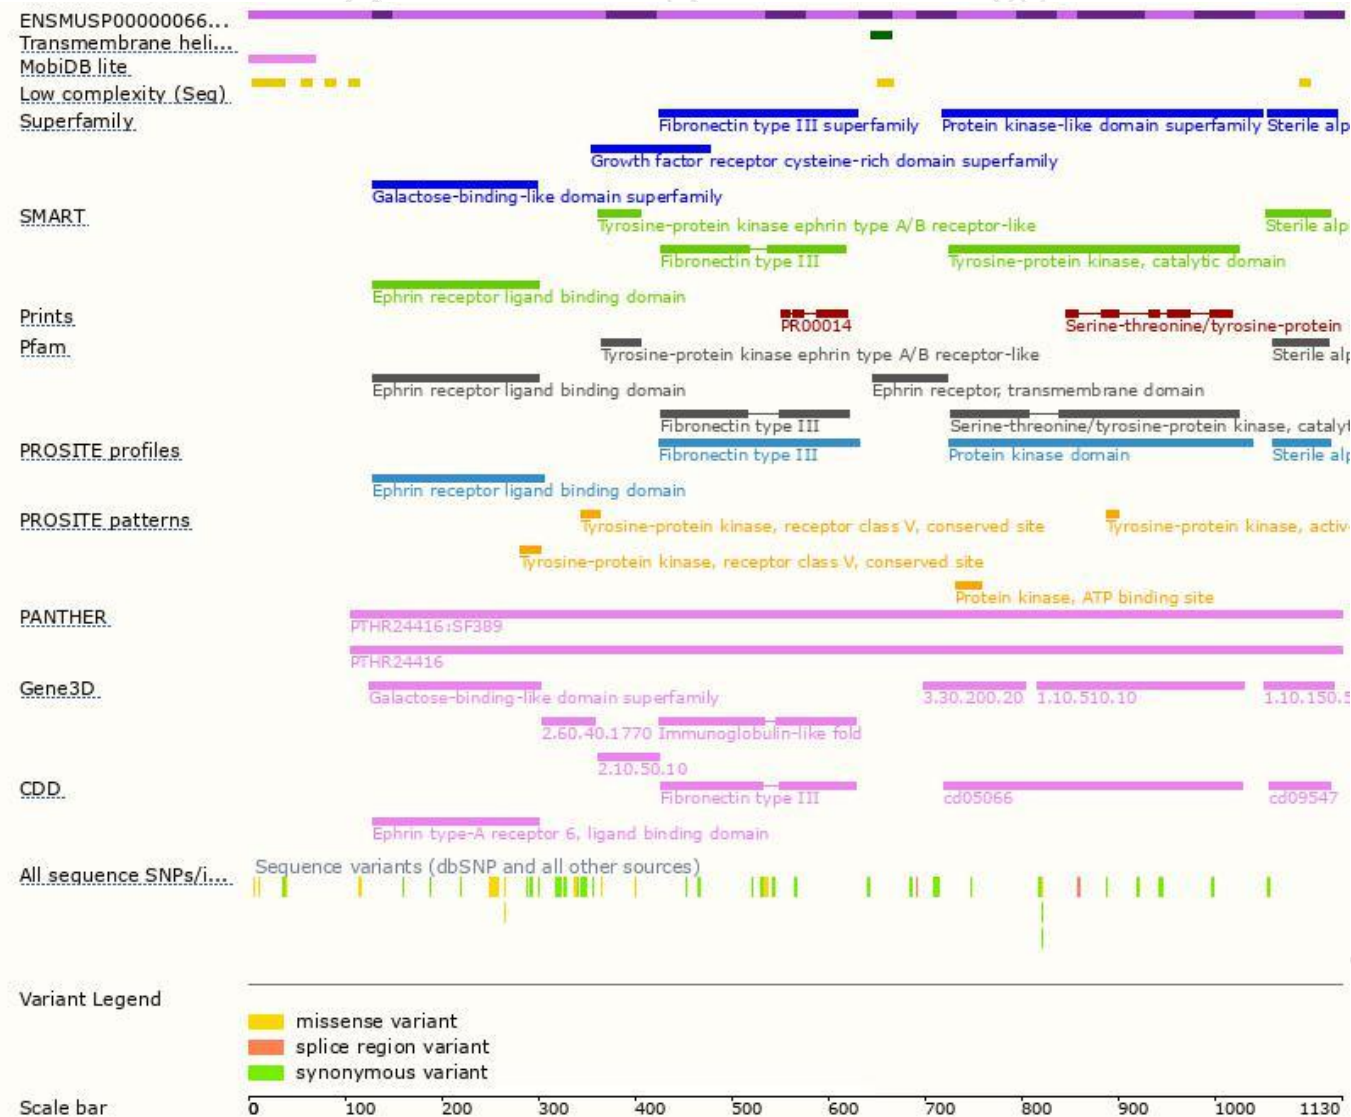

The strategy is based on the design of *Epha6-201* transcript,The transcription is shown below

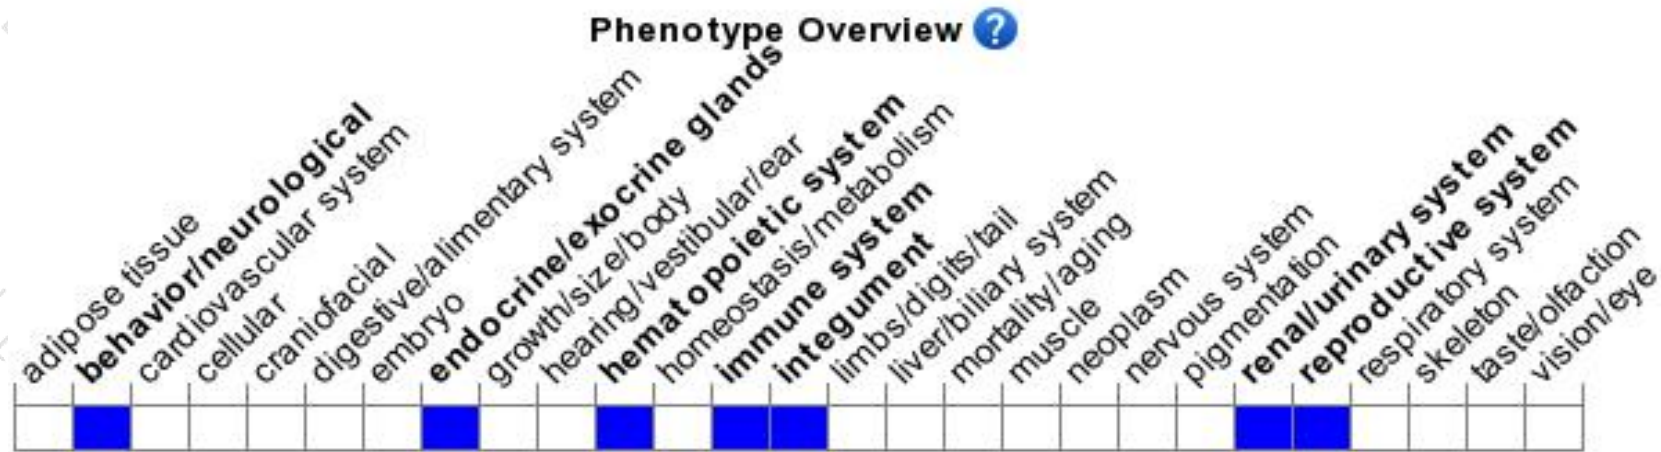

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a knock-out allele display discrete learning and memory deficits.
