

Efemp1 Cas9-CKO Strategy

Designer:

JiaYu

Reviewer:

Xiaojing Li

Design Date:

2020-1-17

Project Overview

Project Name

Efemp1

Project type

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Efemp1* gene. The schematic diagram is as follows:

- The *Efemp1* gene has 3 transcripts. According to the structure of *Efemp1* gene, exon3-exon4 of *Efemp1*-201 (ENSMUST00000020759.11) transcript is recommended as the knockout region. The region contains 436bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Efemp1* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, Mice homozygous for disruptions in this gene display a normal phenotype.
Mice homozygous for a single amino acid substitution develop deposits below the retinal pigment epithelium.
- Transcript 203 CDS 5' incomplete the influences is unknown.
- The *Efemp1* gene is located on the Chr11. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Efemp1 epidermal growth factor-containing fibulin-like extracellular matrix protein 1 [Mus musculus (house mouse)]

Gene ID: 216616, updated on 3-Feb-2019

Summary

Official Symbol	Efemp1 provided by MGI
Official Full Name	epidermal growth factor-containing fibulin-like extracellular matrix protein 1 provided by MGI
Primary source	MGI:MGI:1339998
See related	Ensembl:ENSMUSG00000020467
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Expression	Broad expression in subcutaneous fat pad adult (RPKM 63.1), bladder adult (RPKM 60.9) and 17 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

The gene has 3 transcripts,all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Efemp1-201	ENSMUST00000020759.11	2037	493aa	Protein coding	CCDS48761	Q8BPB5	TSL:1 GENCODE basic APPRIS P1
Efemp1-203	ENSMUST00000139713.1	1021	198aa	Protein coding	-	F6ZFS0	CDS 5' incomplete TSL:3
Efemp1-202	ENSMUST00000124103.1	778	No protein	lncRNA	-	-	TSL:5

The strategy is based on the design of *Efemp1-201* transcript,The transcription is shown below

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for disruptions in this gene display a normal phenotype. Mice homozygous for a single amino acid substitution develop deposits below the retinal pigment epithelium.
