Project Overview

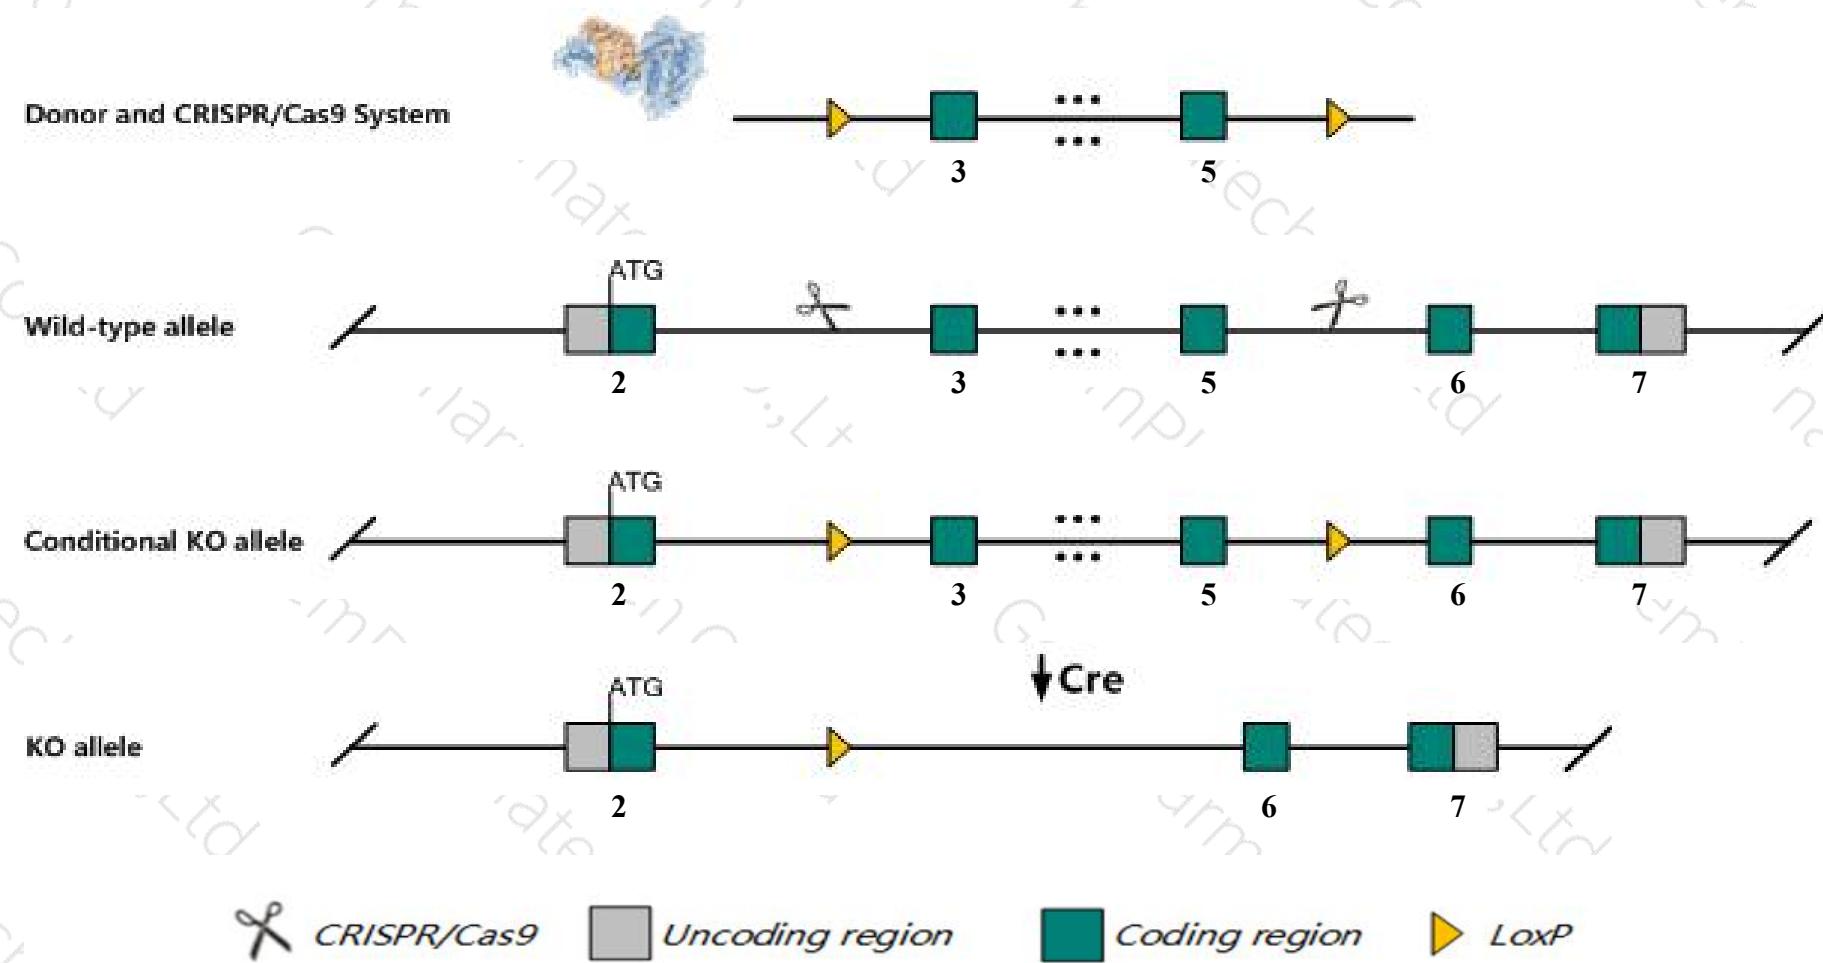

Project Name**Tnfaip1**

Project type**Cas9-CKO**

Strain background**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Tnfaip1* gene. The schematic diagram is as follows:

Technical routes

- The *Tnfaip1* gene has 2 transcripts. According to the structure of *Tnfaip1* gene, exon3-exon5 of *Tnfaip1-202* (ENSMUST00000108277.2) transcript is recommended as the knockout region. The region contains 313bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Tnfaip1* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- The knockout region is near to the N-terminal of *Ift20* gene, this strategy may influence the regulatory function of the N-terminal of *Ift20* gene.
- The *Tnfaip1* gene is located on the Chr11. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Tnfaip1 tumor necrosis factor, alpha-induced protein 1 (endothelial) [*Mus musculus* (house mouse)]

Gene ID: 21927, updated on 10-Oct-2019

Summary

Official Symbol	Tnfaip1 provided by MGI
Official Full Name	tumor necrosis factor, alpha-induced protein 1 (endothelial) provided by MGI
Primary source	MGI:MGI:104961
See related	Ensembl:ENSMUSG00000017615
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukarya; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	Edp1; Edp-1; Tnfip1; Bacurd2
Expression	Ubiquitous expression in lung adult (RPKM 35.5), large intestine adult (RPKM 31.2) and 28 other tissues See more
Orthologs	human all
