Project Overview

Project Name

Tagap

Project type

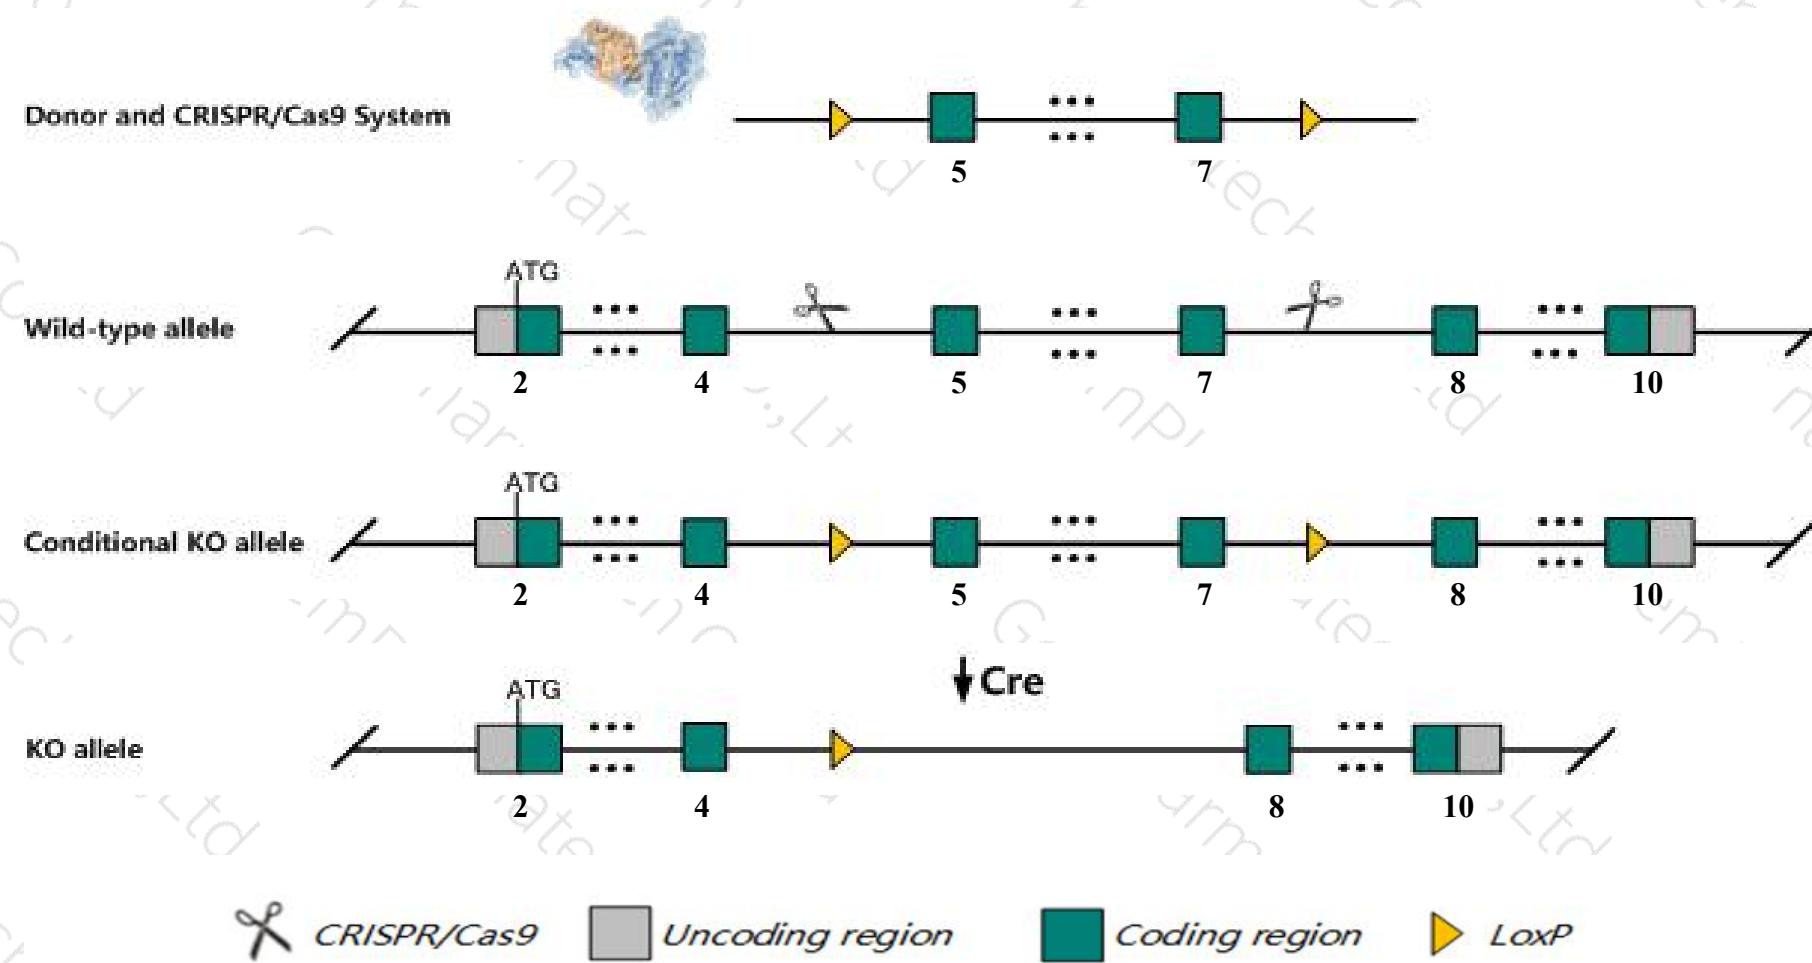

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Tagap* gene. The schematic diagram is as follows:

Technical routes

- The *Tagap* gene has 2 transcripts. According to the structure of *Tagap* gene, exon5-exon7 of *Tagap-201* (ENSMUST00000036370.7) transcript is recommended as the knockout region. The region contains 439bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Tagap* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- The *Tagap* gene is located on the Chr17. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- *E430024P14Rik-203* gene may be affected.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Tagap T cell activation Rho GTPase activating protein [Mus musculus (house mouse)]

Gene ID: 72536, updated on 8-Oct-2019

 Summary

Official Symbol Tagap provided by MC

Official Full Name T cell activation Rho GTPase activating protein provided by MG

Primary source [MGI:MGI:3615484](#)

Transcript information (Ensembl)

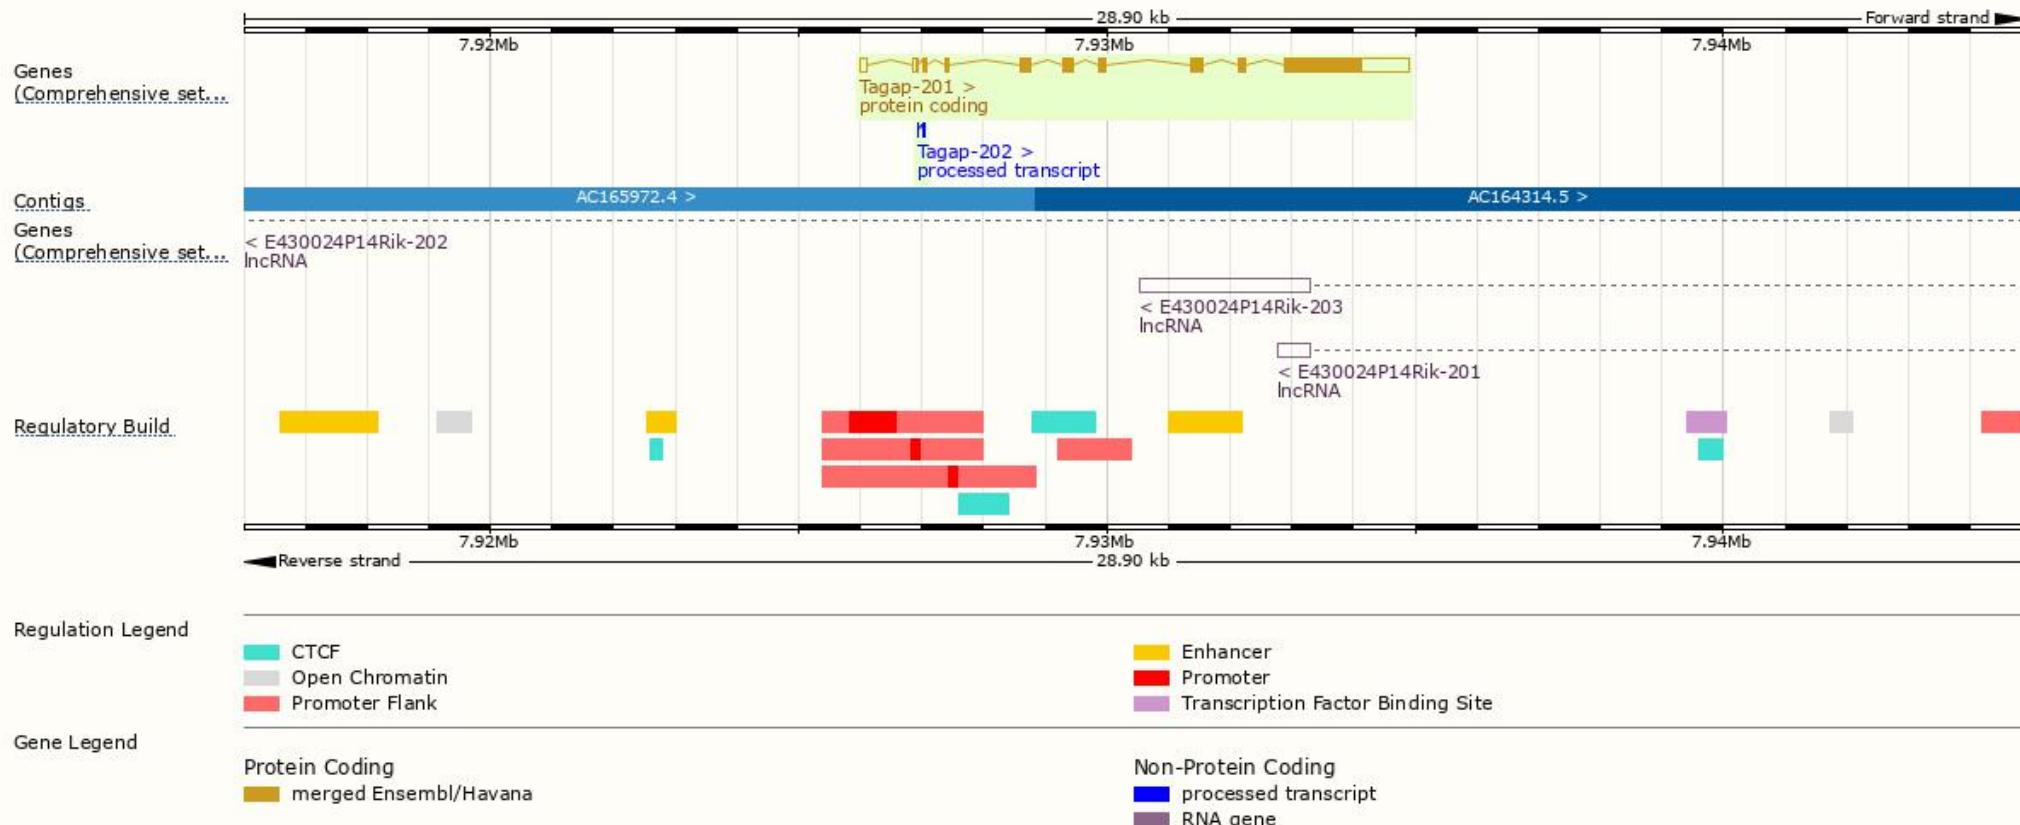

The gene has 2 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Tagap-201	ENSMUST00000036370.7	3076	714aa	Protein coding	CCDS28379	B2RWW0	TSL:1 GENCODE basic APPRIS P1
Tagap-202	ENSMUST00000226153.1	14	No protein	Processed transcript	-	-	-

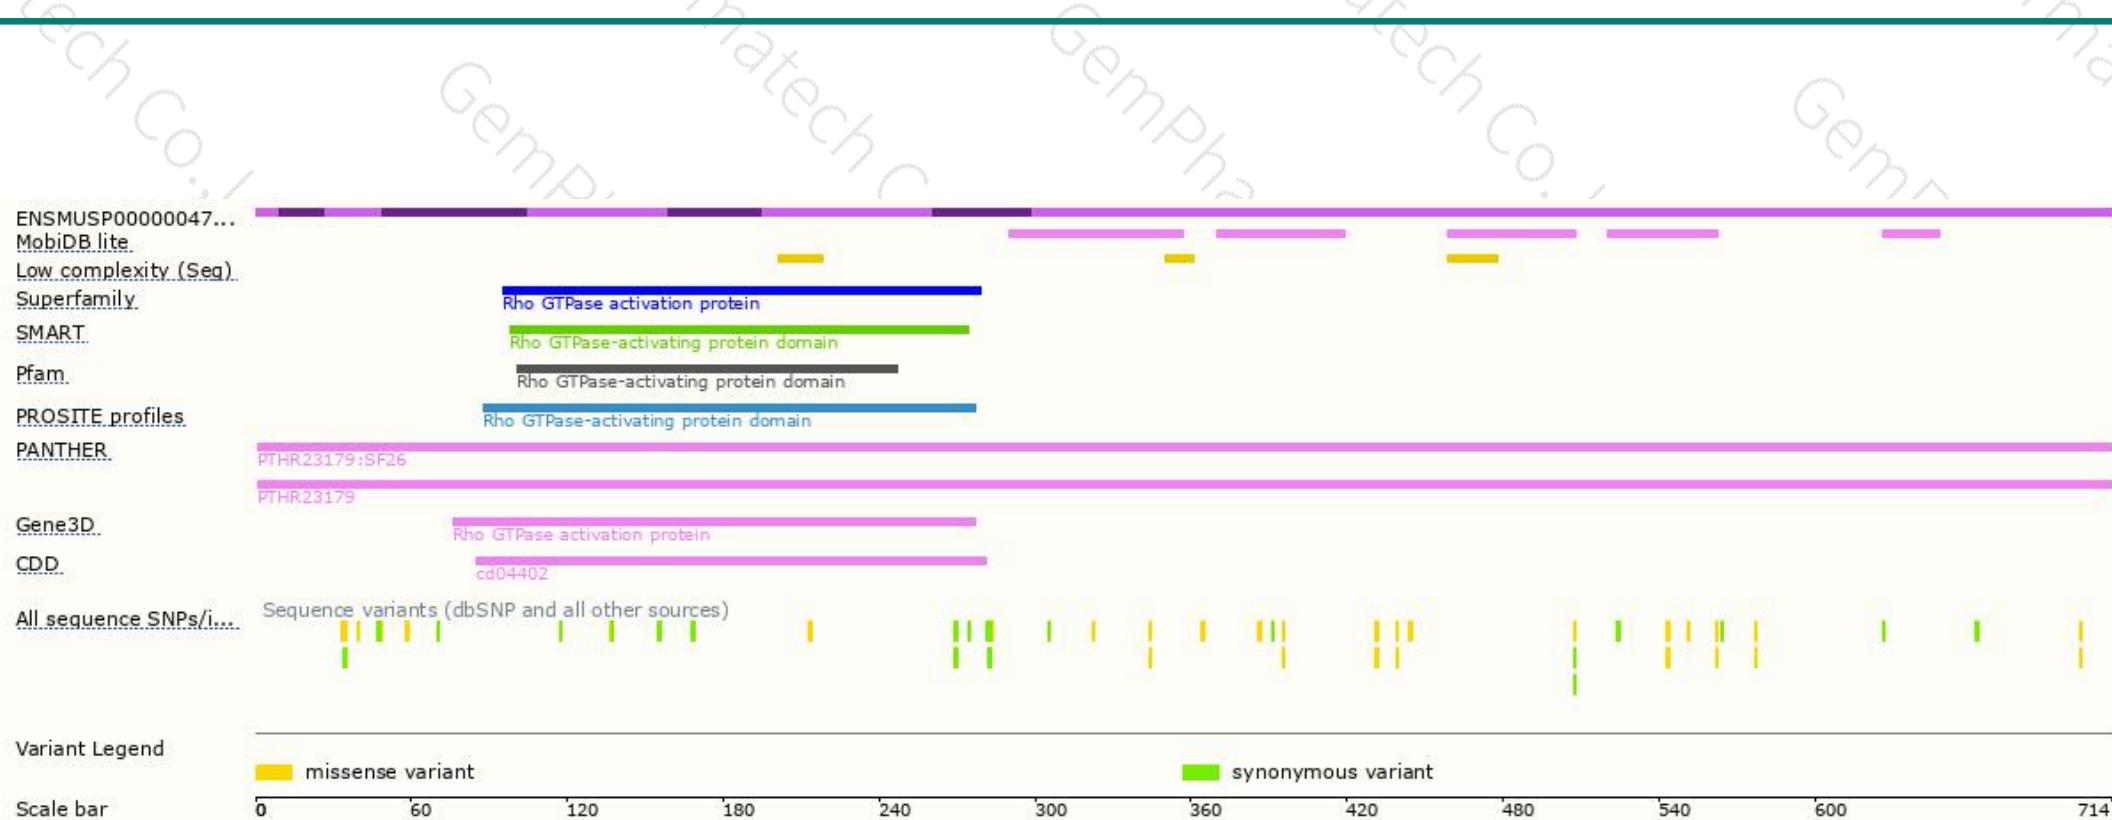

The strategy is based on the design of *Tagap-201* transcript, the transcription is shown below:
