Project Overview

Project Name

Hiflan

Project type

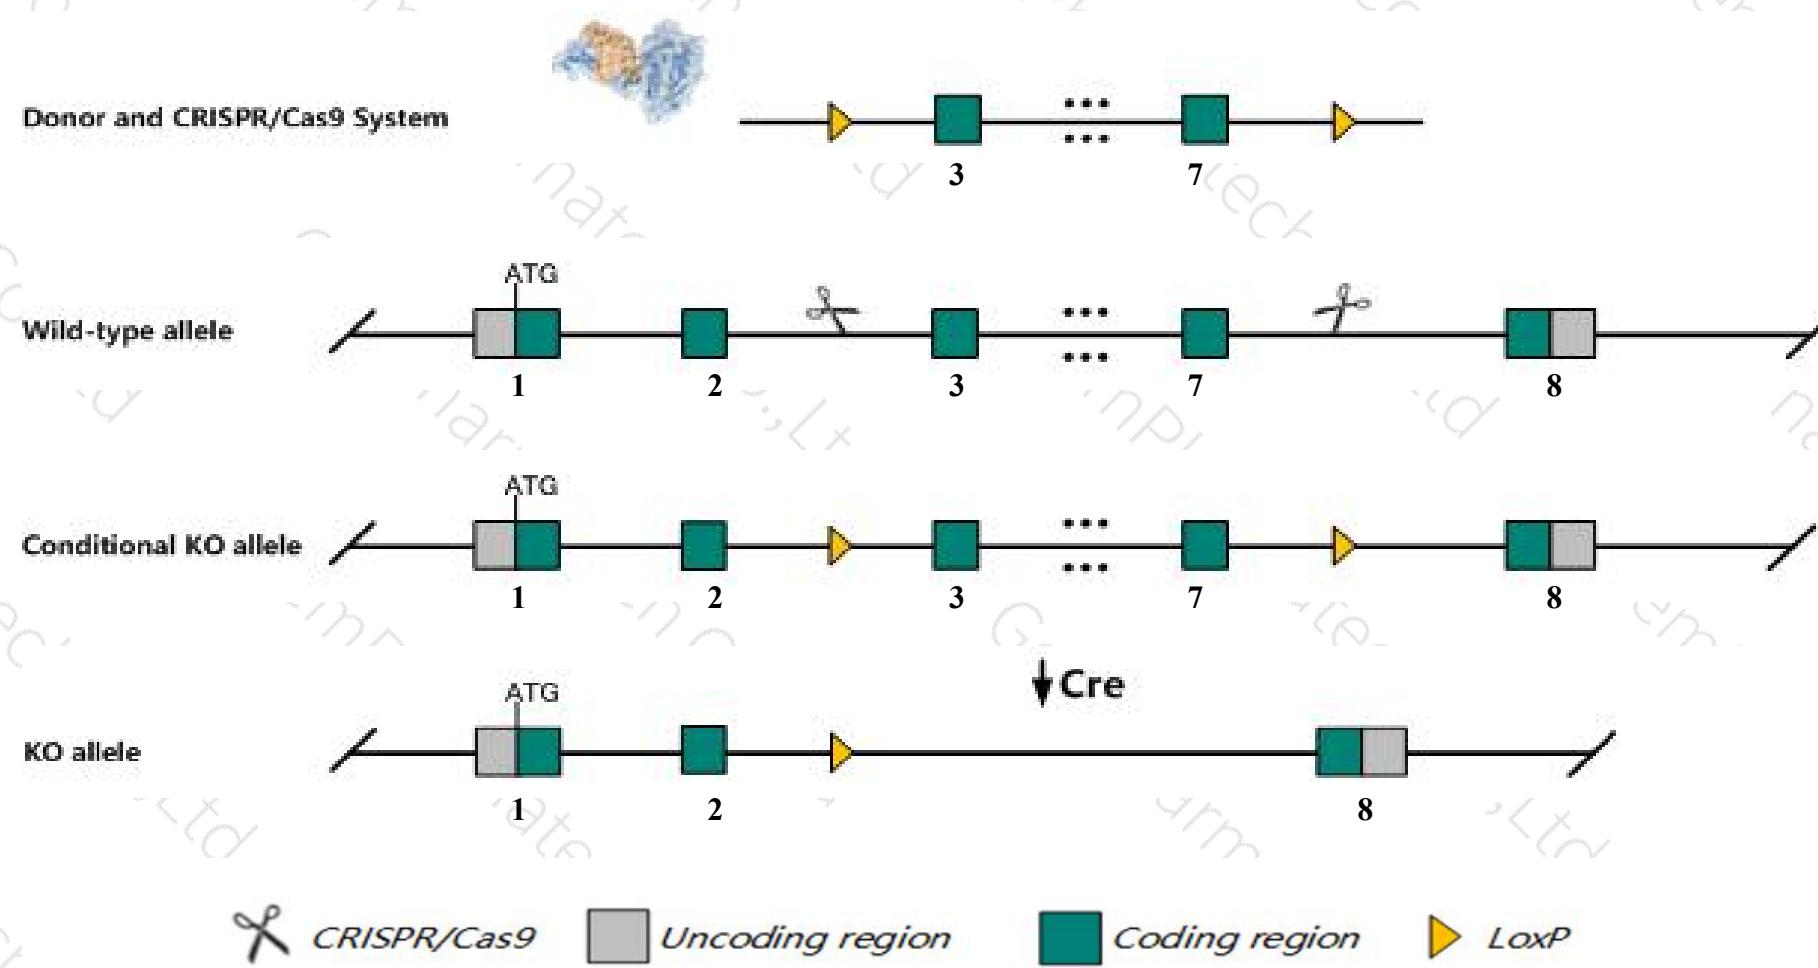

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Hiflan* gene. The schematic diagram is as follows:

Technical routes

- The *Hiflan* gene has 2 transcripts. According to the structure of *Hiflan* gene, exon3-exon7 of *Hiflan-201* (ENSMUST00000040455.4) transcript is recommended as the knockout region. The region contains 577bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Hiflan* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Mice homozygous for a null allele have metabolic, behavioral and cardiopulmonary abnormalities.
- The *Hiflan* gene is located on the Chr19. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Hif1an hypoxia-inducible factor 1, alpha subunit inhibitor [*Mus musculus* (house mouse)]

Gene ID: 319594, updated on 5-Nov-2019

Summary

Official Symbol	Hif1an provided by MGI
Official Full Name	hypoxia-inducible factor 1, alpha subunit inhibitor provided by MGI
Primary source	MGI:MGI:2442345
See related	Ensembl:ENSMUSG0000036450
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	FIH; FIH1; 2310046M24Rik; A830014H24Rik
Expression	Ubiquitous expression in heart adult (RPKM 12.4), CNS E11.5 (RPKM 11.6) and 28 other tissues See more
Orthologs	human all

Genomic context

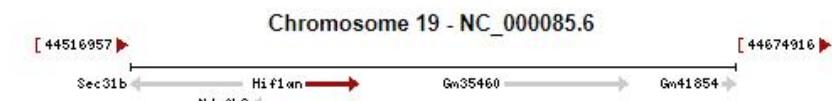

Location: 19: 19 C3

[See Hif1an in Genome Data Viewer](#)

Exon count: 8

Annotation release	Status	Assembly	Chr	Location
108	current	GRCm38.p6 (GCF_000001635.26)	19	NC_000085.6 (44562854..44576274)
Build 37.2	previous assembly	MGSCv37 (GCF_000001635.18)	19	NC_000085.5 (44637344..44650764)

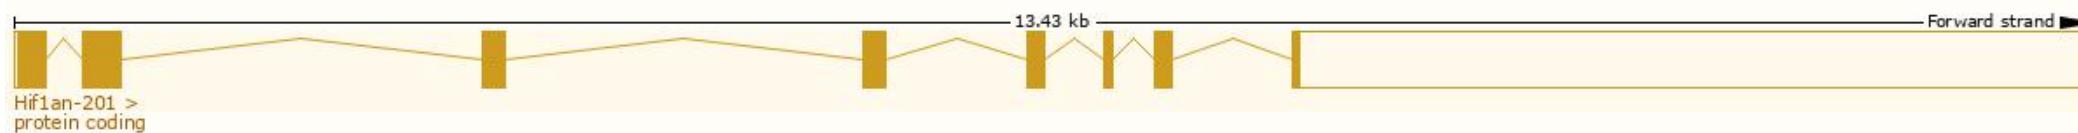

Transcript information (Ensembl)

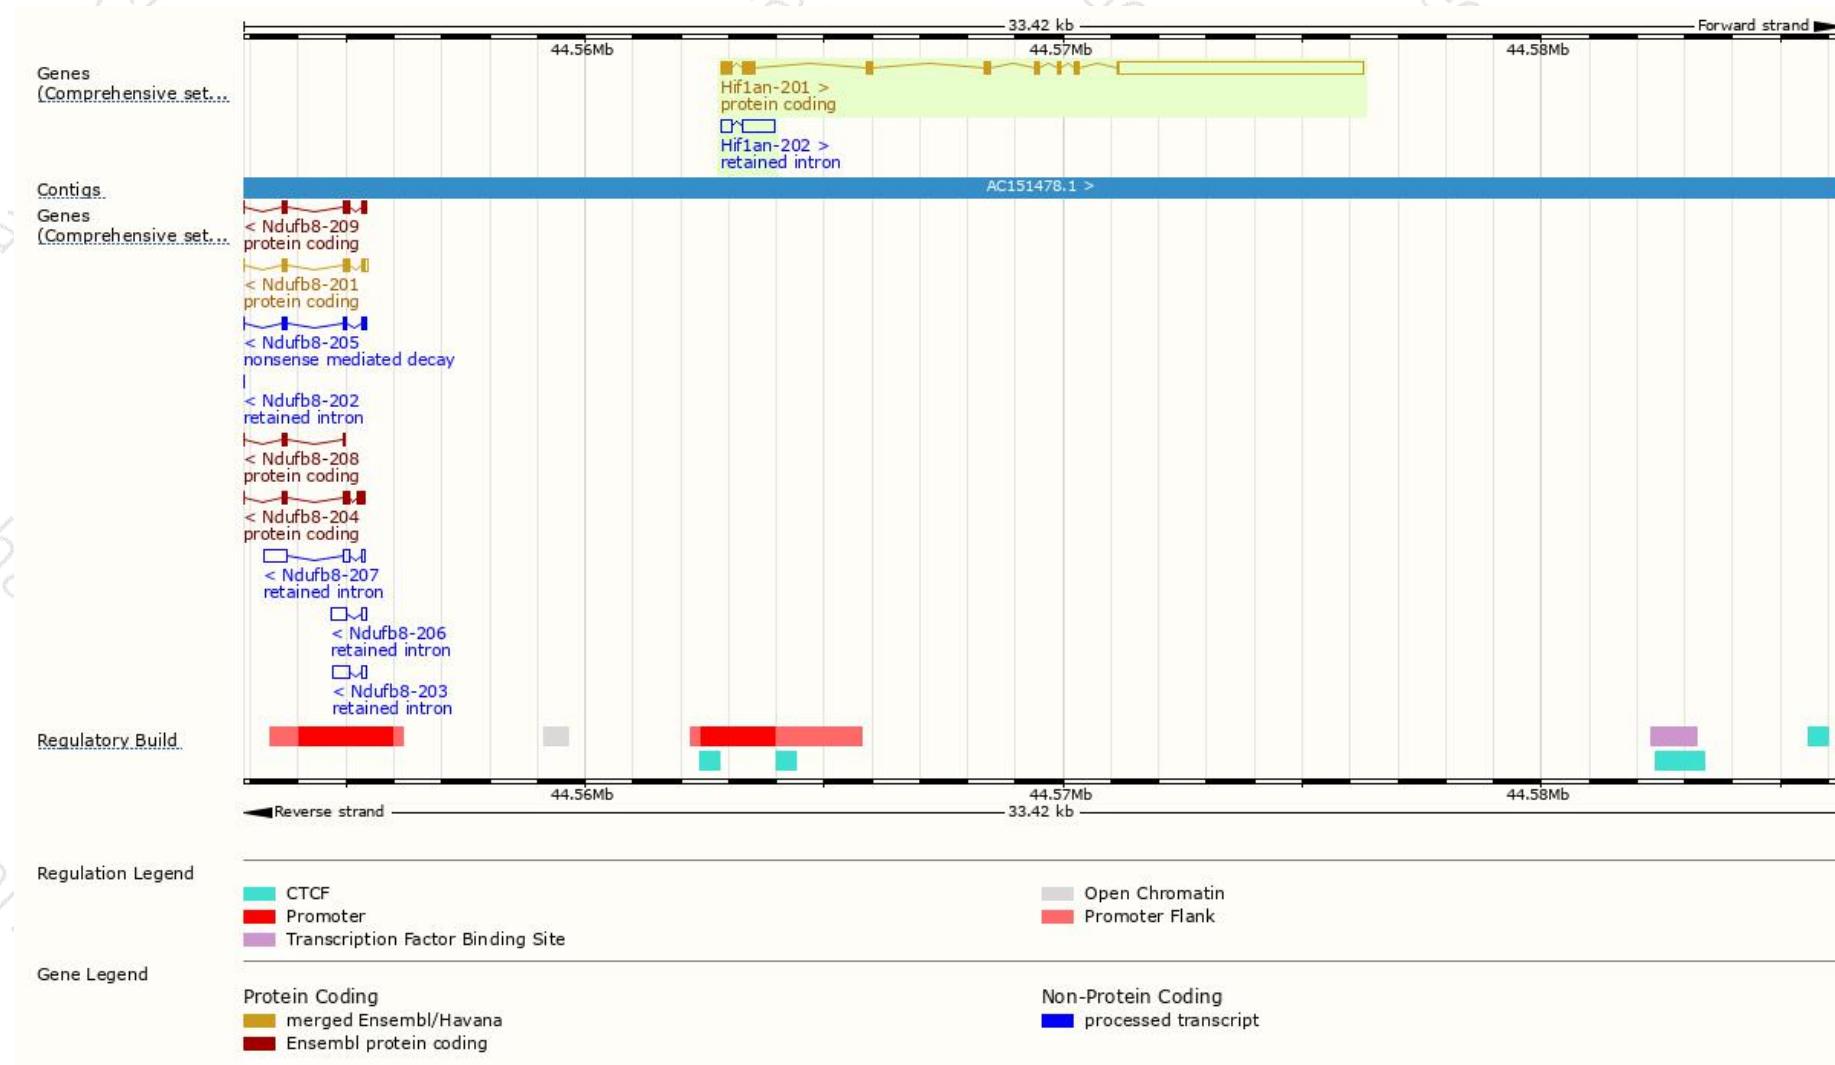

The gene has 2 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Hif1an-201	ENSMUST00000040455.4	6194	<u>349aa</u>	Protein coding	CCDS29852	Q8BLR9	TSL:1 GENCODE basic APPRIS P1
Hif1an-202	ENSMUST00000131032.1	868	No protein	Retained intron	-	-	TSL:1

The strategy is based on the design of *Hif1an-201* transcript, The transcription is shown below

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a null allele have metabolic, behavioral and cardiopulmonary abnormalities.
