

Sox30 Cas9-CKO Strategy

Designer:

Daohua Xu

Reviewer:

Huimin Su

Design Date:

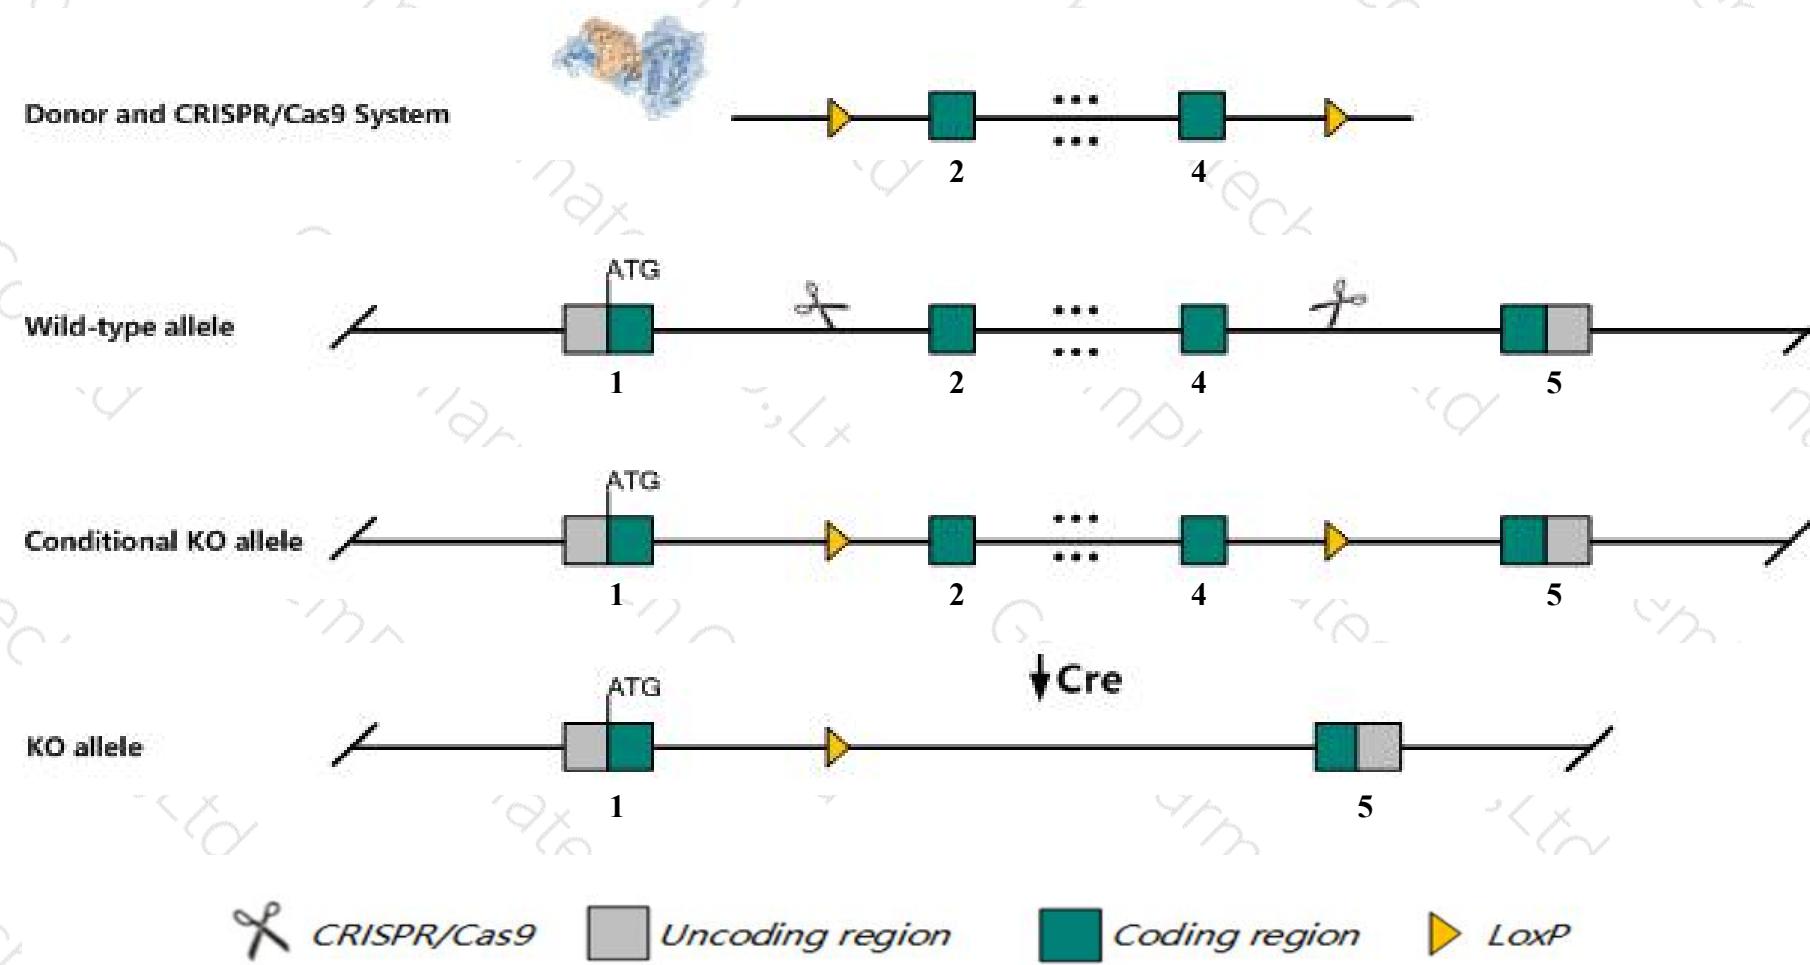

2020-2-25

Project Overview

Project Name	Sox30
Project type	Cas9-CKO
Strain background	C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Sox30* gene. The schematic diagram is as follows:

Technical routes

- The *Sox30* gene has 1 transcript. According to the structure of *Sox30* gene, exon2-exon4 of *Sox30-201* (ENSMUST00000049038.3) transcript is recommended as the knockout region. The region contains 913bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Sox30* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Male mice homozygous for a null allele are infertile with arrest of spermiogenesis and azoospermia.
- The *Sox30* gene is located on the Chr11. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Sox30 SRY (sex determining region Y)-box 30 [Mus musculus (house mouse)]

Gene ID: 214105, updated on 31-Jan-2019

Summary

Official Symbol Sox30 provided by [MGI](#)

Official Full Name SRY (sex determining region Y)-box 30 provided by [MGI](#)

Primary source [MGI:MGI:1341157](#)

Mouse phenotype description(MGI)

Male mice homozygous for a null allele are infertile with arrest of spermiogenesis and azoospermia.

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Male mice homozygous for a null allele are infertile with arrest of spermiogenesis and azoospermia.
