Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Pex7* gene. The schematic diagram is as follows:

江苏集萃药康生物科技股份有限公司

GemPharmatech Co., Ltd.

The *Pex7* gene has 4 transcripts. According to the structure of *Pex7* gene, exon2-exon3 of *Pex7-201* (ENSMUST0000020182.15) transcript is recommended as the knockout region. The region contains 209bp coding sequence. Knock out the region will result in disruption of protein function.

In this project we use CRISPR/Cas9 technology to modify *Pex7* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, Mice homozygous for mutations in this gene, are petite with cataracts and have delayed ossification and fertility defects. Additionally, mice have biochemical defects in plasmalogen biosynthesis.
- The Pex7 gene is located on the Chr10. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Pex7 peroxisomal biogenesis factor 7 [Mus musculus (house mouse)]

Gene ID: 18634, updated on 31-Jan-2019

Summary

Official Symbol	Pex7 provided by MGI
Official Full Name	peroxisomal biogenesis factor 7 provided by MGI
Primary source	MGI:MGI:1321392
See related	Ensembl:ENSMUSG00000020003
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Also known as	MmPEX7
Expression	Ubiquitous expression in adrenal adult (RPKM 57.2), liver adult (RPKM 36.9) and 28 other tissues See more
Orthologs	human all

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, Mice homozygous for mutations in this gene, are petite with cataracts and have delayed ossification and fertility defects. Additionally, mice have biochemical defects in plasmalogen biosynthesis.
