

Nenf Cas9-CKO Strategy

Designer:

Jia Yu

Reviewer:

Xiaojing Li

Design Date:

2020-2-20

Project Overview

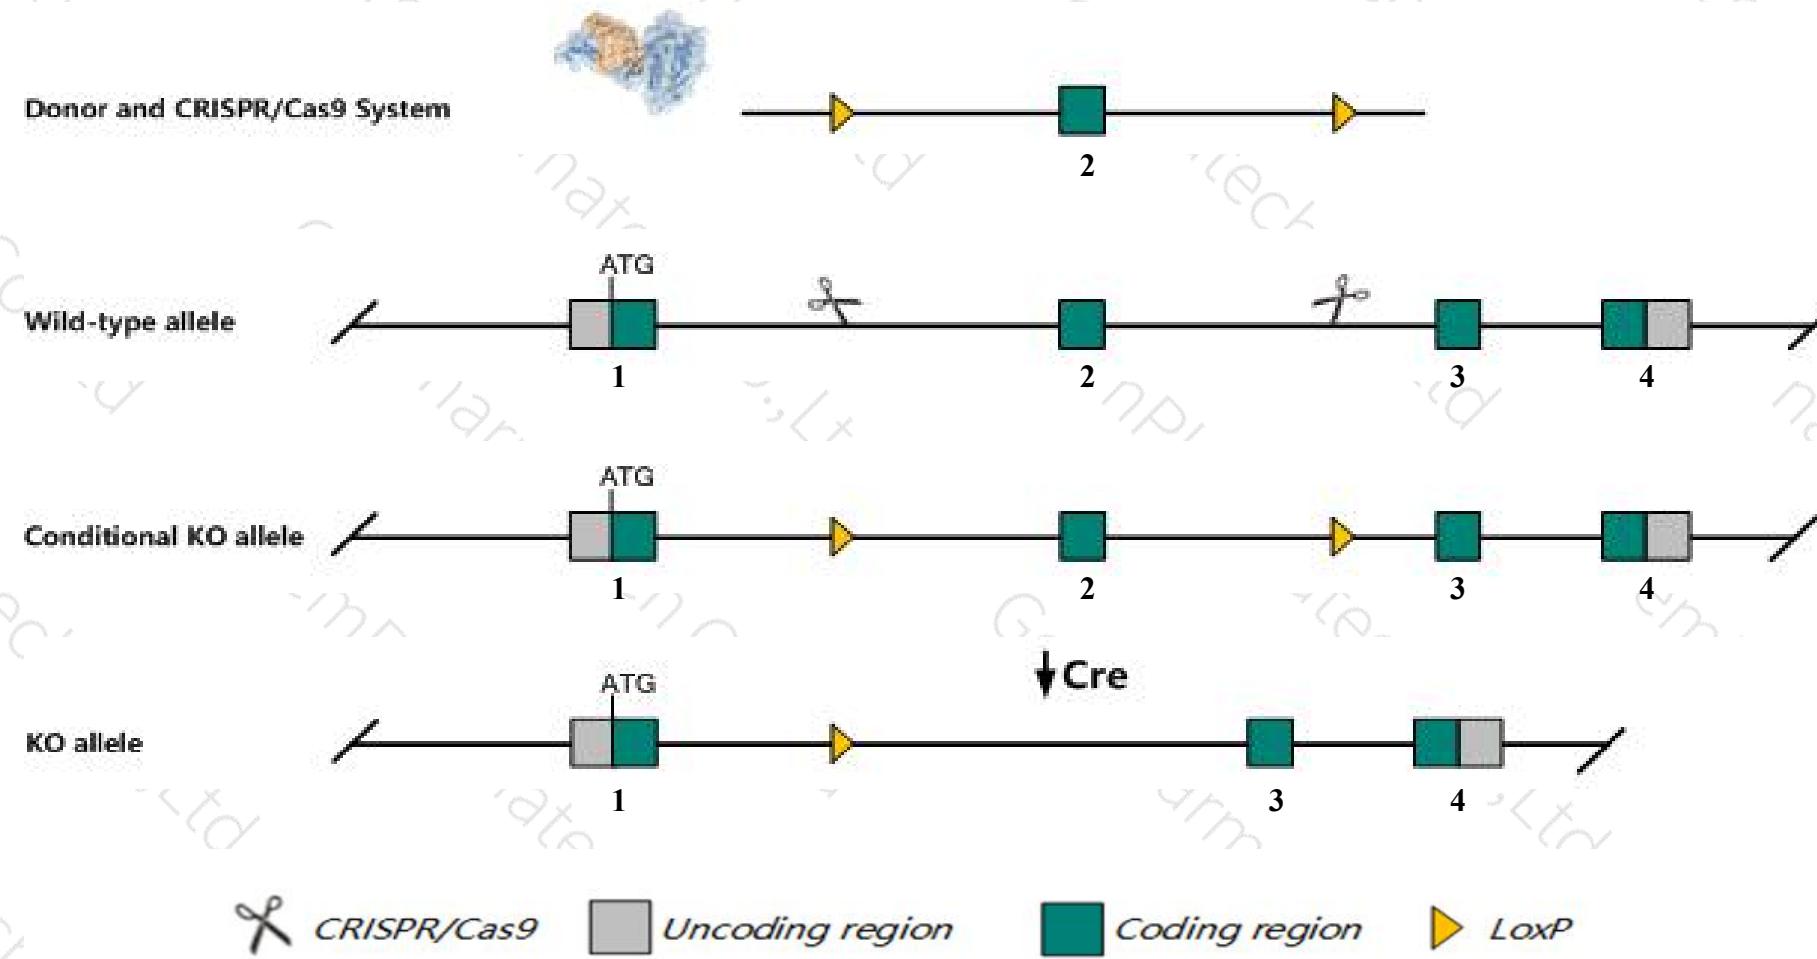

Project Name***Nenf***

Project type**Cas9-CKO**

Strain background**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Nenf* gene. The schematic diagram is as follows:

Technical routes

- The *Nenf* gene has 1 transcript. According to the structure of *Nenf* gene, exon2 of *Nenf-201* (ENSMUST00000046770.9) transcript is recommended as the knockout region. The region contains 61bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Nenf* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Mice homozygous for a knock-out allele exhibit increased anxiety-related response, abnormal dendrite morphology and decreased dopamine levels.
- The *Nenf* gene is located on the Chr1. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Nenf neuron derived neurotrophic factor [Mus musculus (house mouse)]

Gene ID: 66208, updated on 31-Jan-2019

Summary

Official Symbol Nenf provided by [MGI](#)

Official Full Name neuron derived neurotrophic factor provided by [MGI](#)

Primary source [MGI:MGI:1913458](#)

See related [Ensembl:ENSMUSG00000037499](#)

Gene type protein coding

RefSeq status VALIDATED

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as 1110060M21Rik, SCIRP10, Spuf

Expression Ubiquitous expression in ovary adult (RPKM 144.0), adrenal adult (RPKM 120.8) and 28 other tissues [See more](#)

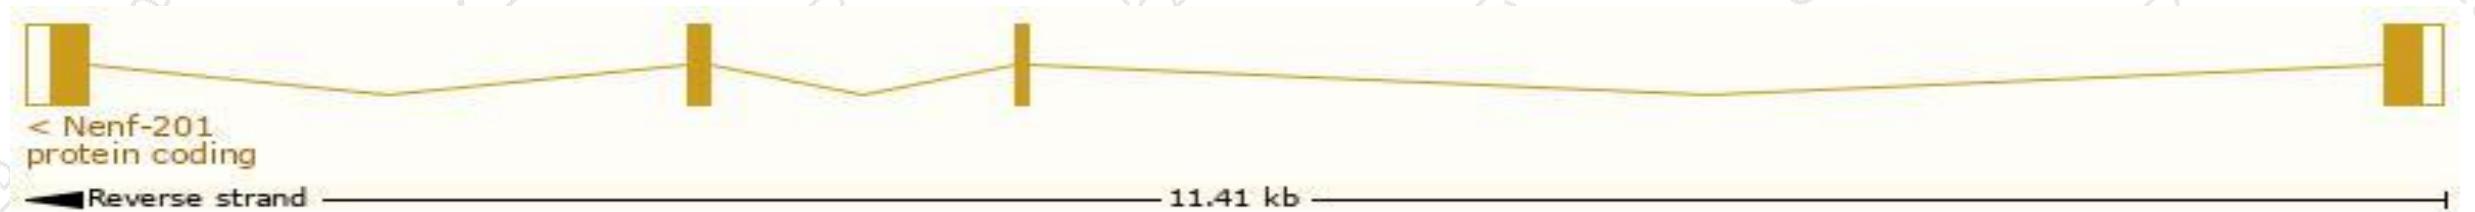

Orthologs [human](#) [all](#)

Transcript information (Ensembl)

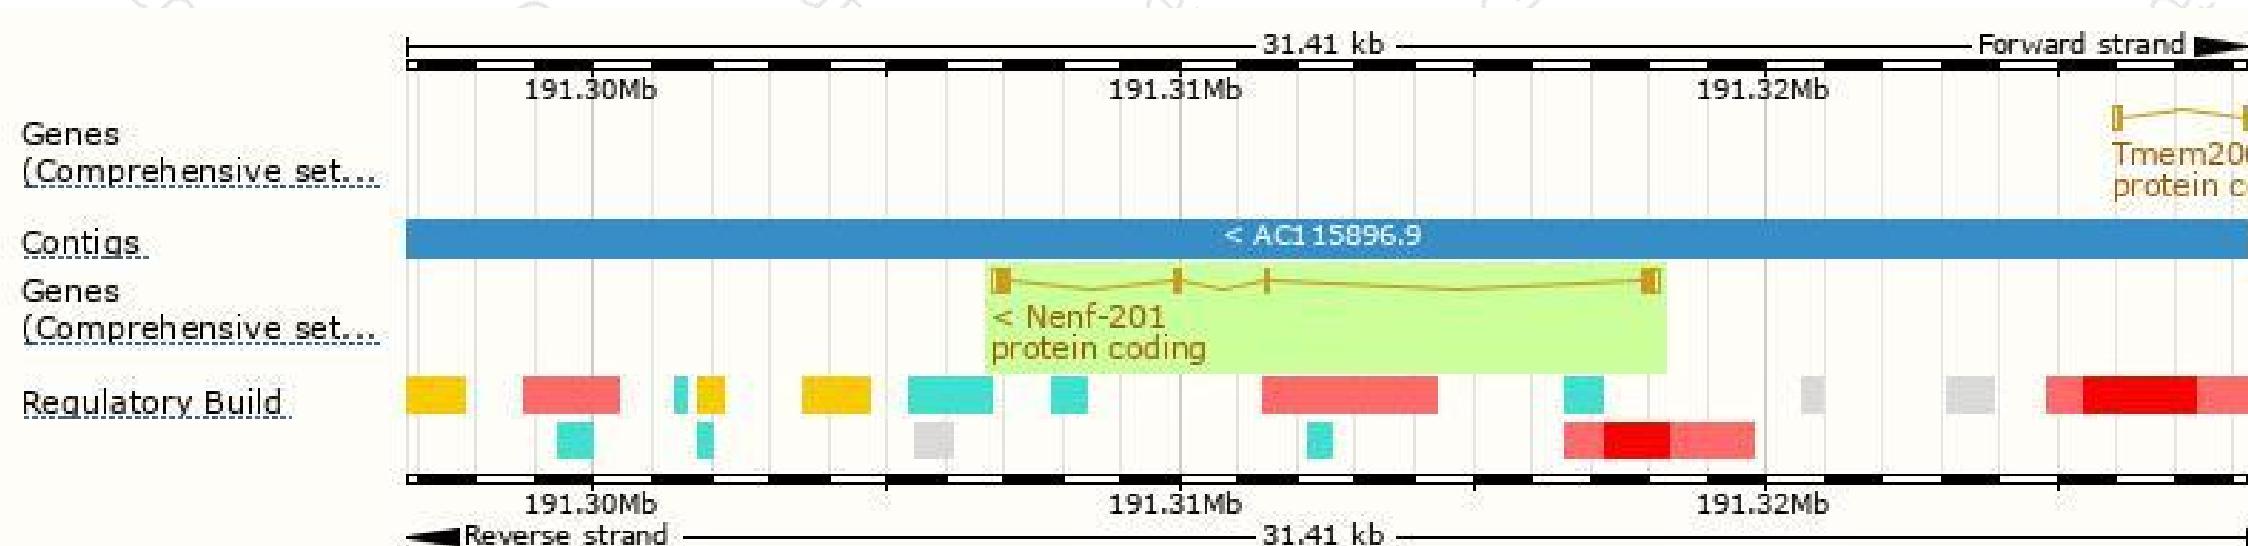

The gene has 1 transcript, and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Nenf-201	ENSMUST00000046770.9	742	171aa	Protein coding	CCDS15618	Q9CQ45	TSL:1 GENCODE basic APPRIS P1

The strategy is based on the design of *Nenf-201* transcript. The transcription is shown below

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a knock-out allele exhibit increased anxiety-related response, abnormal dendrite morphology and decreased dopamine levels.
