

***Lrrn1* Cas9-CKO Strategy**

Designer: Xueting Zhang

Reviewer: Yanhua Shen

Date: 2020-02-17

Project Overview

Project Name

Lrrn1

Project type

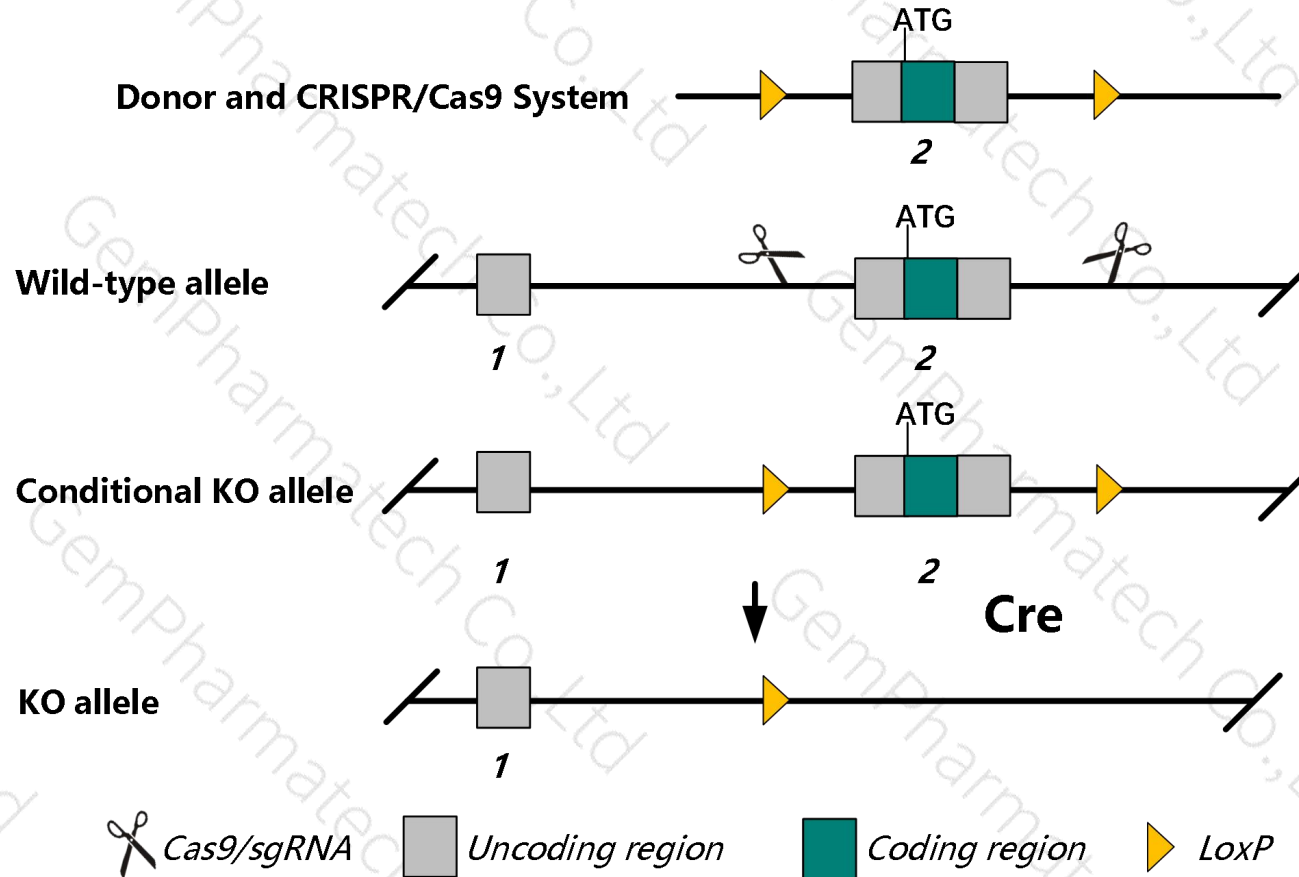

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Lrrn1* gene. The schematic diagram is as follows:

- The *Lrrn1* gene has 1 transcript. According to the structure of *Lrrn1* gene, exon2 of *Lrrn1-201* (ENSMUST00000049285.9) transcript is recommended as the knockout region. The region contains all of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Lrrn1* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, Homozygous null mutant mice exhibited decreased exploratory activity and the female mutants exhibited an increased anxiety-like response during open field testing.
- The *Lrrn1* gene is located on the Chr6. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Lrrn1 leucine rich repeat protein 1, neuronal [*Mus musculus* (house mouse)]

Gene ID: 16979, updated on 12-Aug-2019

Summary

- Official Symbol

Lrrn1 provided by MGI
- Official Full Name

leucine rich repeat protein 1, neuronal provided by MGI
- Primary source

MGI:MGI:106038
- See related

Ensembl:ENSMUSG000000034648
- Gene type

protein coding
- RefSeq status

VALIDATED
- Organism

Mus musculus
- Lineage

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
- Also known as

NLRR-1; 2810047E21Rik
- Expression

Biased expression in adrenal adult (RPKM 59.2), ovary adult (RPKM 34.4) and 9 other tissues [See more](#)
- Orthologs

[human](#) [all](#)

Genomic context

Location: 6; 6 E1

See Lrrn1 in [Genome Data Viewer](#)

Exon count: 2

Annotation release	Status	Assembly	Chr	Location
108	current	GRCm38.p6 (GCF_000001635.26)	6	NC_000072.6 (107529726..107570228)
Build 37.2	previous assembly	MGSCv37 (GCF_000001635.18)	6	NC_000072.5 (107479779..107520204)

Transcript information (Ensembl)

The gene has 1 transcript, and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Lrrn1-201	ENSMUST00000049285.9	3700	716aa	Protein coding	CCDS20399	Q61809	TSL:1 GENCODE basic APPRIS P1

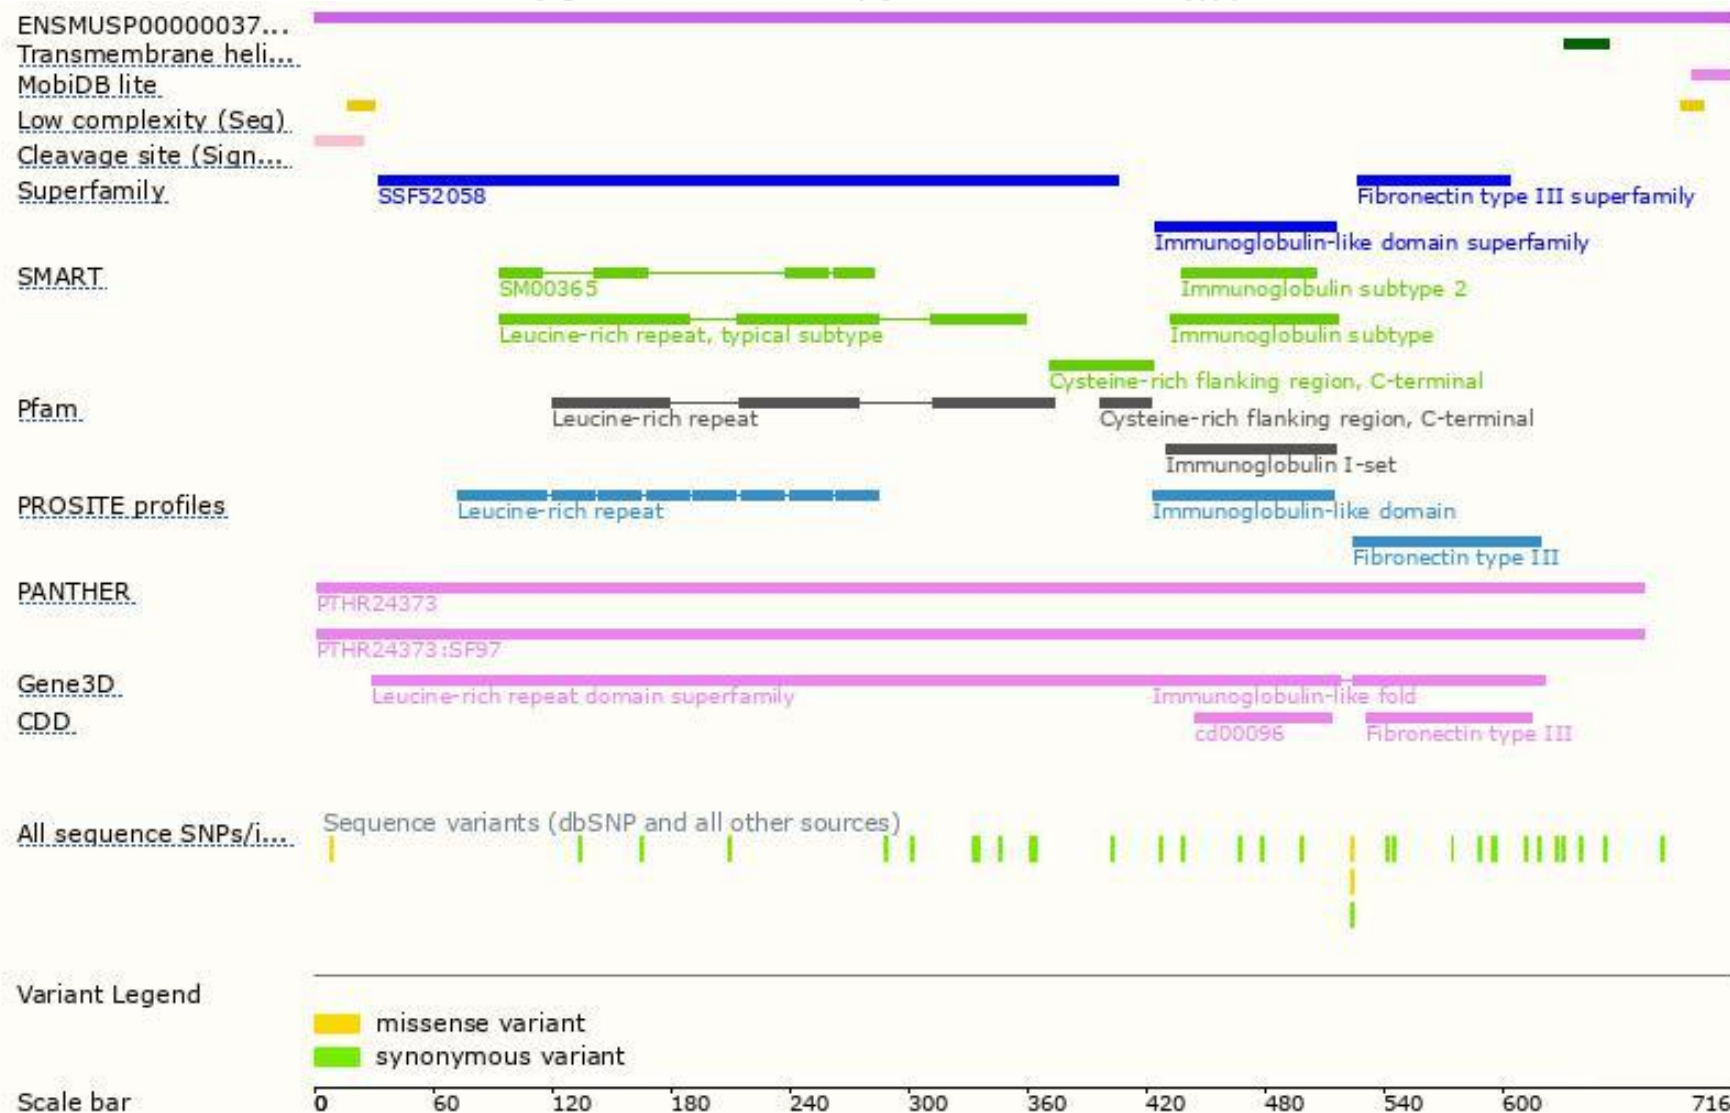

The strategy is based on the design of *Lrrn1-201* transcript, The transcription is shown below

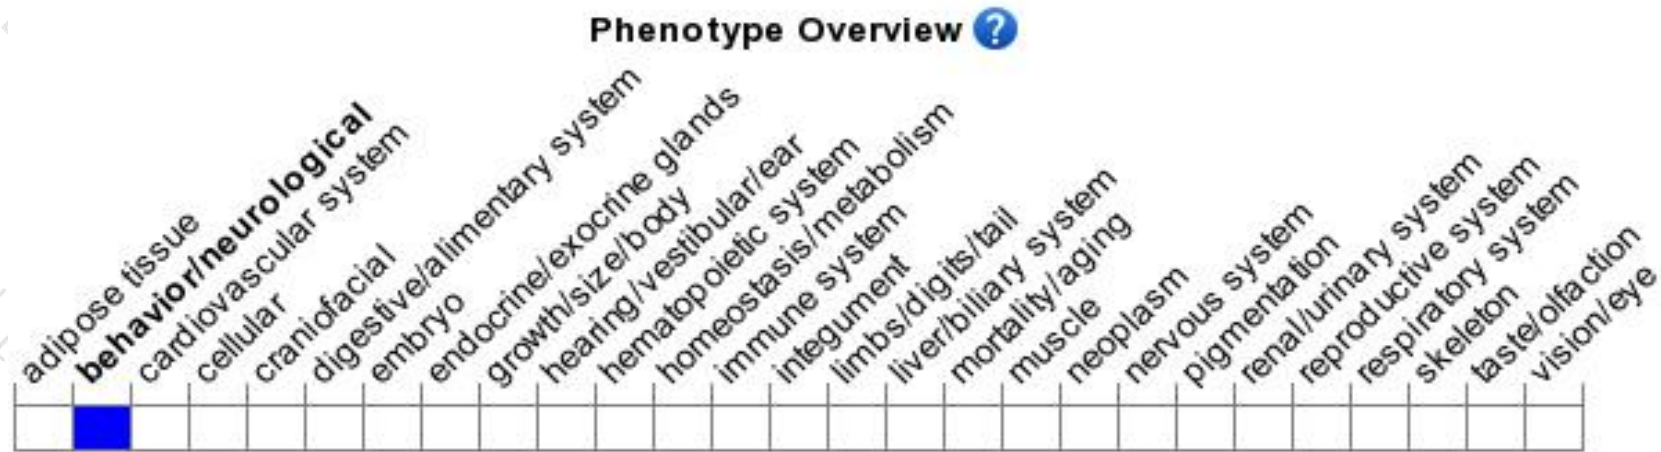

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Homozygous null mutant mice exhibited decreased exploratory activity and the female mutants exhibited an increased anxiety-like response during open field testing.
