Project Overview

Project Name

Stard7

Project type

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Stard7* gene. The schematic diagram is as follows:

- The *Stard7* gene has 8 transcripts. According to the structure of *Stard7* gene, exon2-exon6 of *Stard7*-202 (ENSMUST00000110375.8) transcript is recommended as the knockout region. The region contains 553bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Stard7* gene. The brief process is as follows: CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

- According to the existing MGI data, Heterozygous KO results in exaggerated allergic response (lung inflammation, increased epithelial barrier permeability and airway responsiveness) and atopic dermatitis.
- The *Stard7* gene is located on the Chr2. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Stard7 START domain containing 7 [Mus musculus (house mouse)]

Gene ID: 99138, updated on 31-Jan-2019

Summary

Official Symbol	Stard7 provided by MGI
Official Full Name	START domain containing 7 provided by MGI
Primary source	MGI:MGI:2139090
See related	Ensembl:ENSMUSG00000027367
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	AI852671, AL022671, AW544915
Expression	Ubiquitous expression in CNS E18 (RPKM 28.6), heart adult (RPKM 28.6) and 28 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

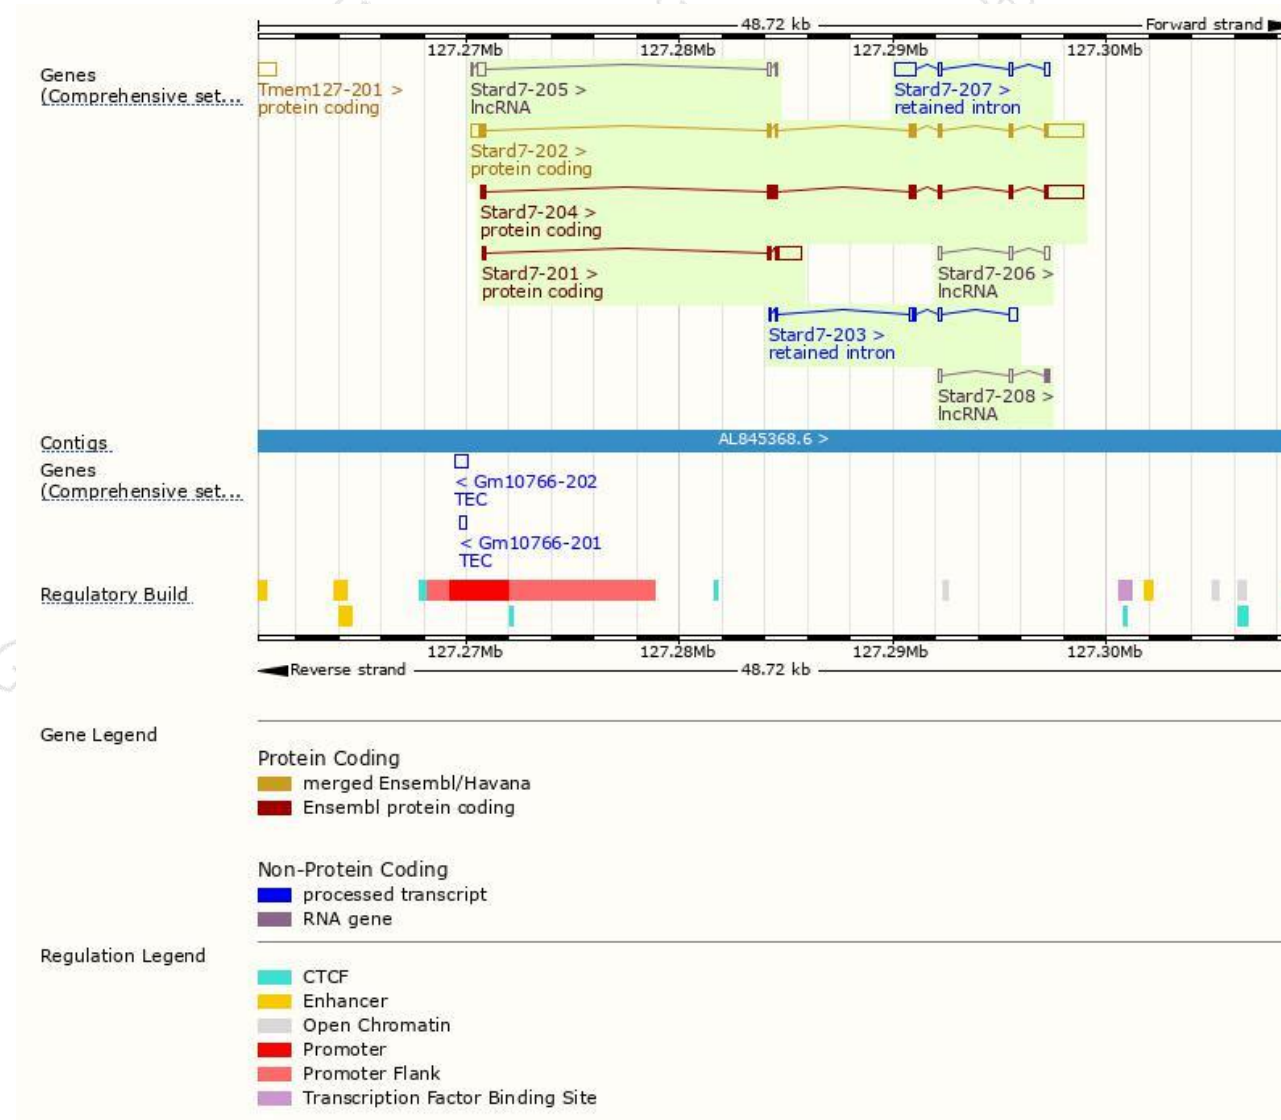

The gene has 8 transcripts,all transcripts are shown below:

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Heterozygous KO results in exaggerated allergic response (lung inflammation, increased epithelial barrier permeability and airway responsiveness) and atopic dermatitis.
