Chst5 Cas9-CKO Strategy

Designer: JiaYu

Reviewer: Xiaojing Li

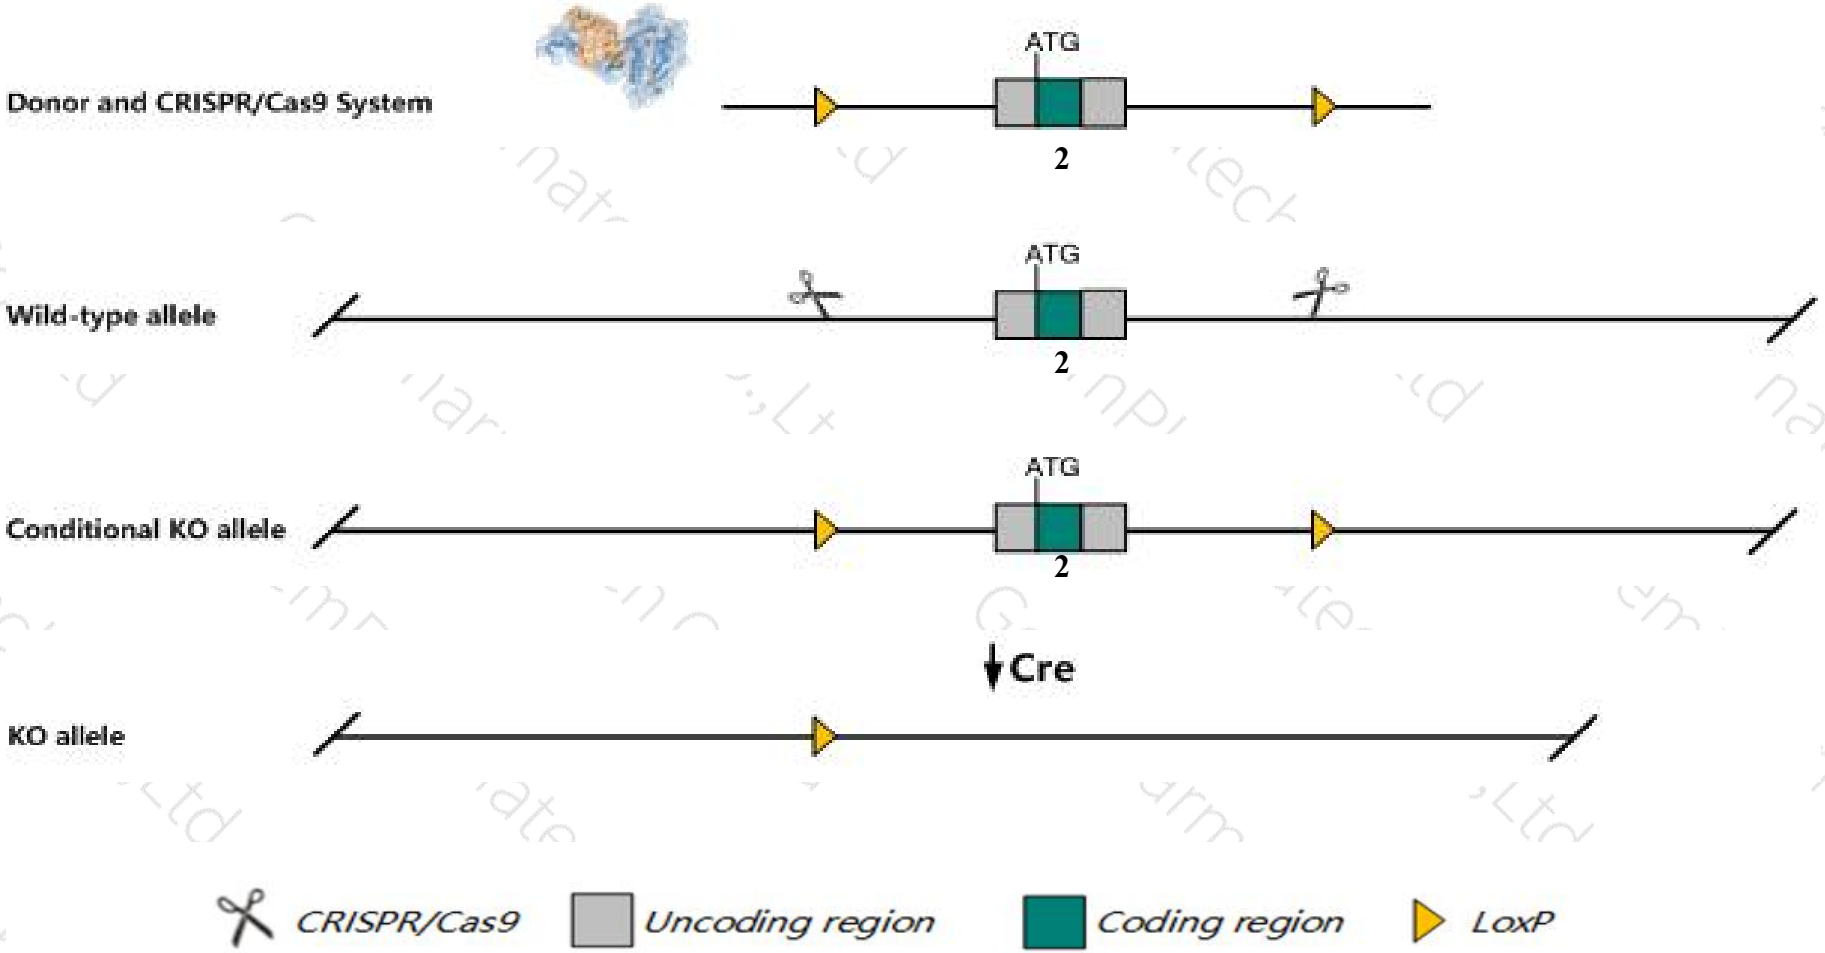
Design Date: 2020-3-3

Project Overview

Project Name	***Chst5***
Project type	**Cas9-CKO**
Strain background	**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Chst5* gene. The schematic diagram is as follows:



Technical routes

- The *Chst5* gene has 1 transcript. According to the structure of *Chst5* gene, exon2 of *Chst5-201* (ENSMUST00000034430.5) transcript is recommended as the knockout region.The region contains all of the coding sequence.Knock out the region will result in disruption of protein function.

- In this project we use CRISPR/Cas9 technology to modify *Chst5* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data,Homozygous mutation of this gene results in thinner corneas that show abnormally close collagen fibrillar packing.

- The *Chst5* gene is located on the Chr8. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.

- This Strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information （NCBI）

Chst5 carbohydrate (N-acetylglucosamine 6-O) sulfotransferase 5 [Mus musculus (house mouse)]

Gene ID: 56773, updated on 31-Jan-2019

Summary

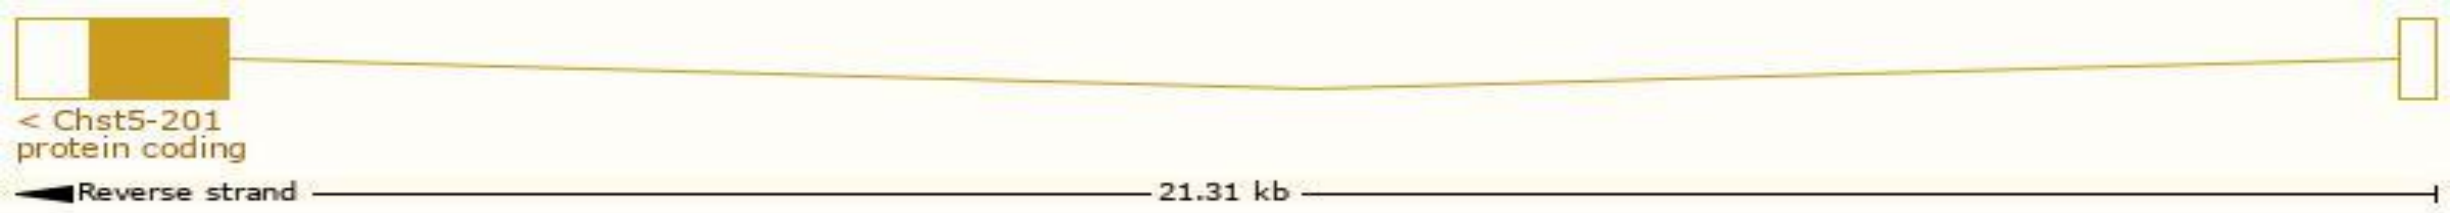
Official Symbol	Chst5 provided by MGI
Official Full Name	carbohydrate (N-acetylglucosamine 6-O) sulfotransferase 5 provided by MGI
Primary source	MGI:MGI:1931825
See related	Ensembl:ENSMUSG00000031952
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	AI173964, GST-4, Gn6st-3, I-GlcNAc-6-ST
Expression	Biased expression in limb E14.5 (RPKM 5.5), lung adult (RPKM 3.7) and 12 other tissues See more

Transcript information（Ensembl）

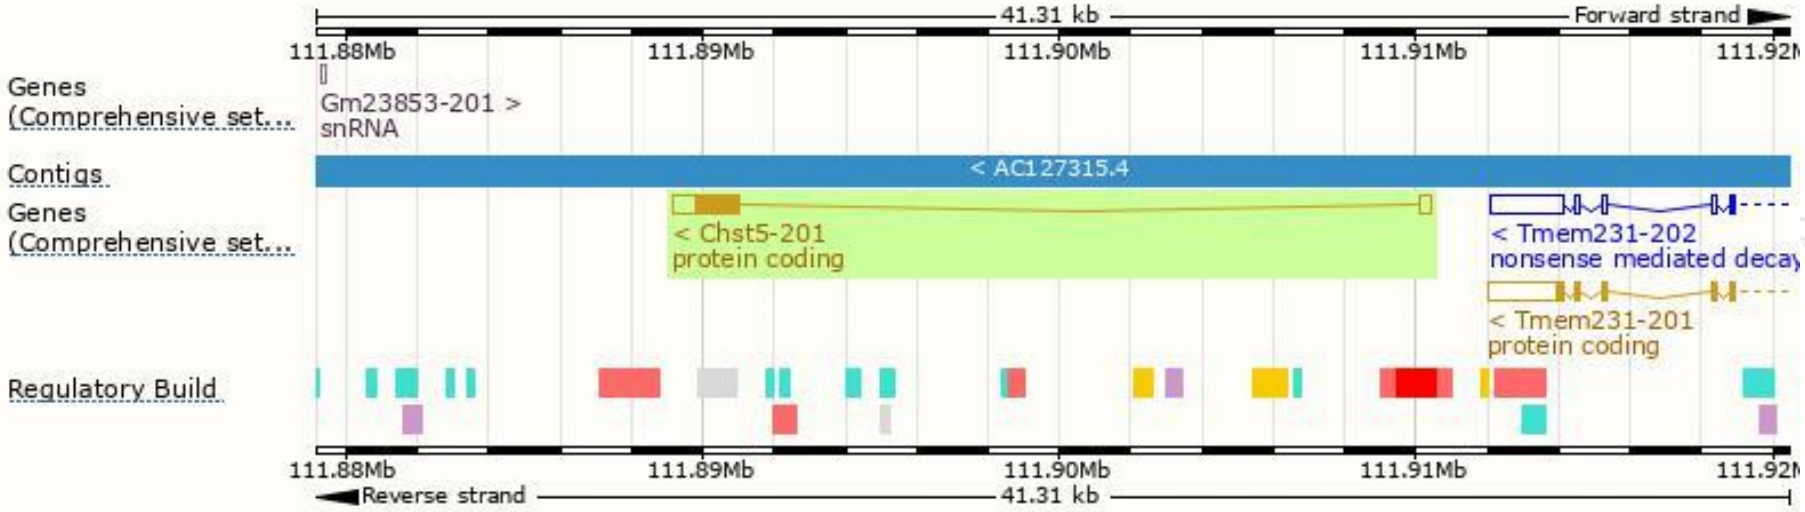
The gene has 1 transcript,and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Chst5-201	ENSMUST00000034430.5	2182	395aa	Protein coding	CCDS22682	Q9QUP4	TSL:1 GENCODE basic APPRIS P1

The strategy is based on the design of *Chst5-201* transcript,The transcription is shown below



Genomic location distribution



Gene Legend

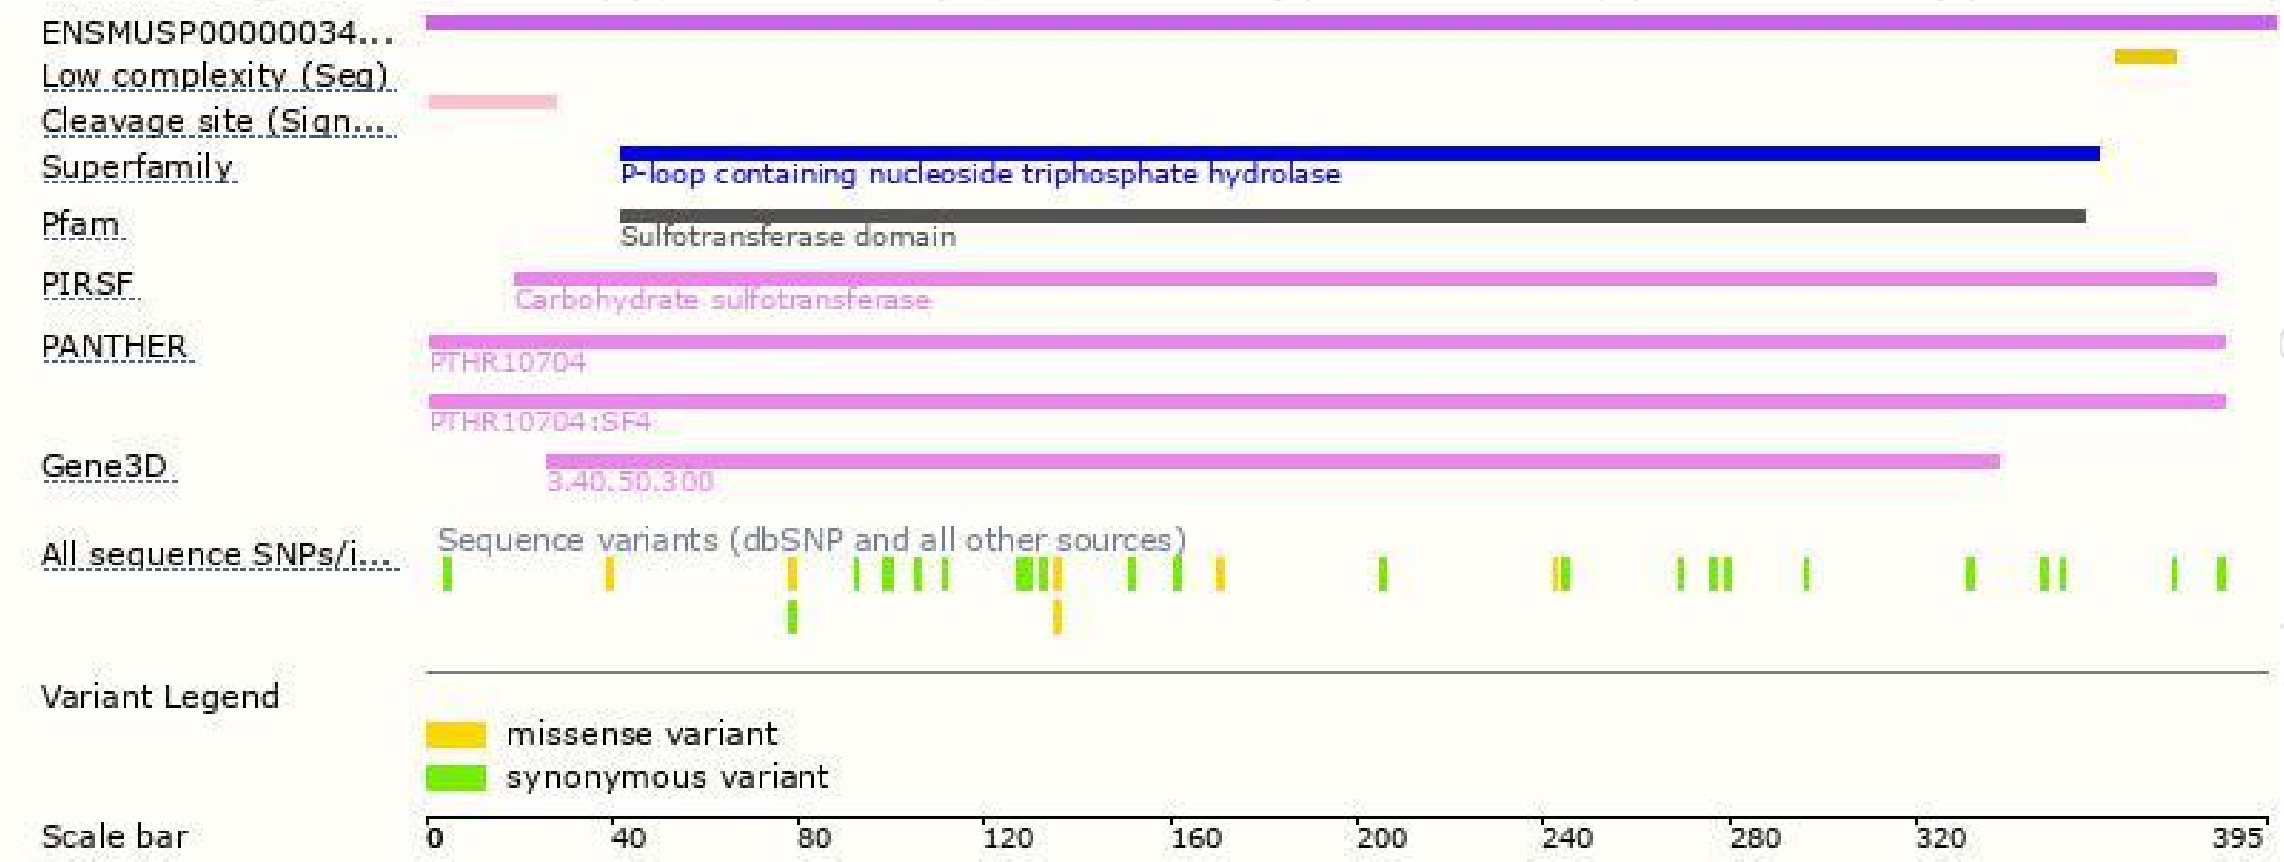
Protein Coding
- merged Ensembl/Havana

Non-Protein Coding
- processed transcript
- RNA gene

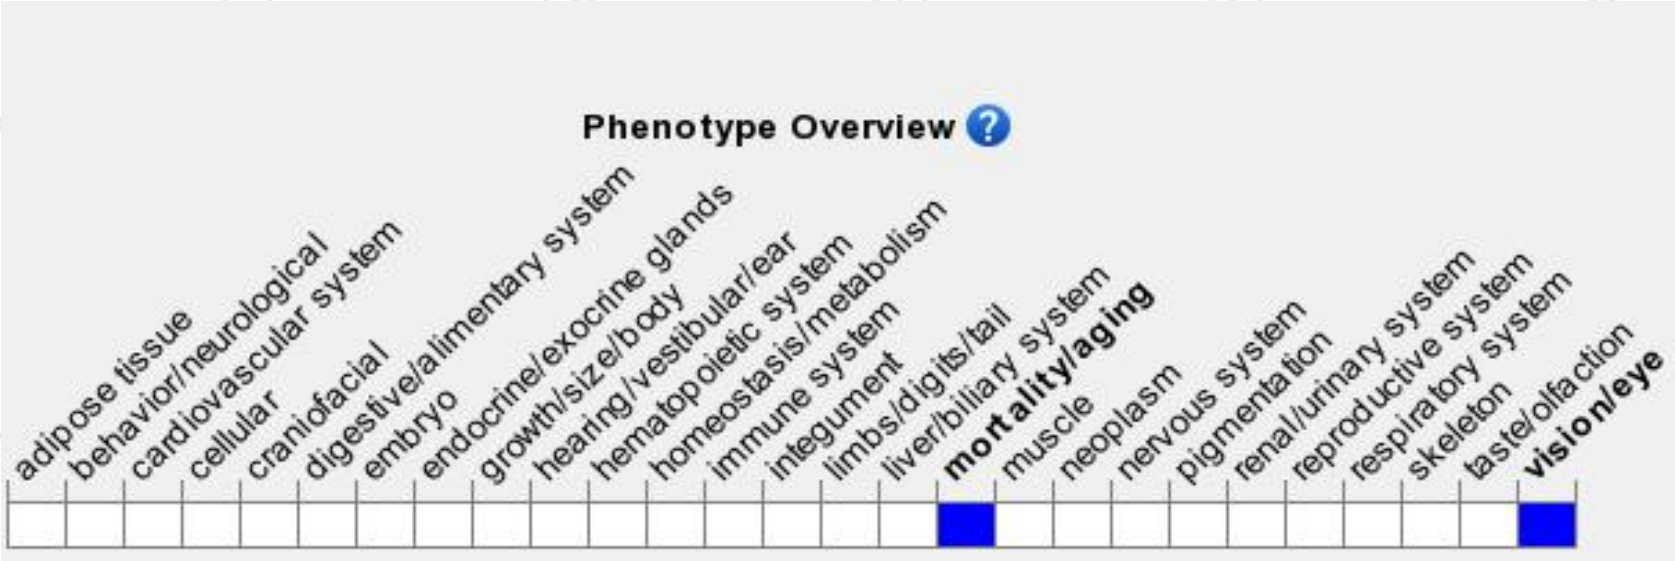
Regulation Legend

- CTCF
- Enhancer
- Open Chromatin
- Promoter
- Promoter Flank
- Transcription Factor Binding Site

Protein domain



Mouse phenotype description(MGI)



Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data,Homozygous mutation of this gene results in thinner corneas that show abnormally close collagen fibrillar packing.
