Project Overview

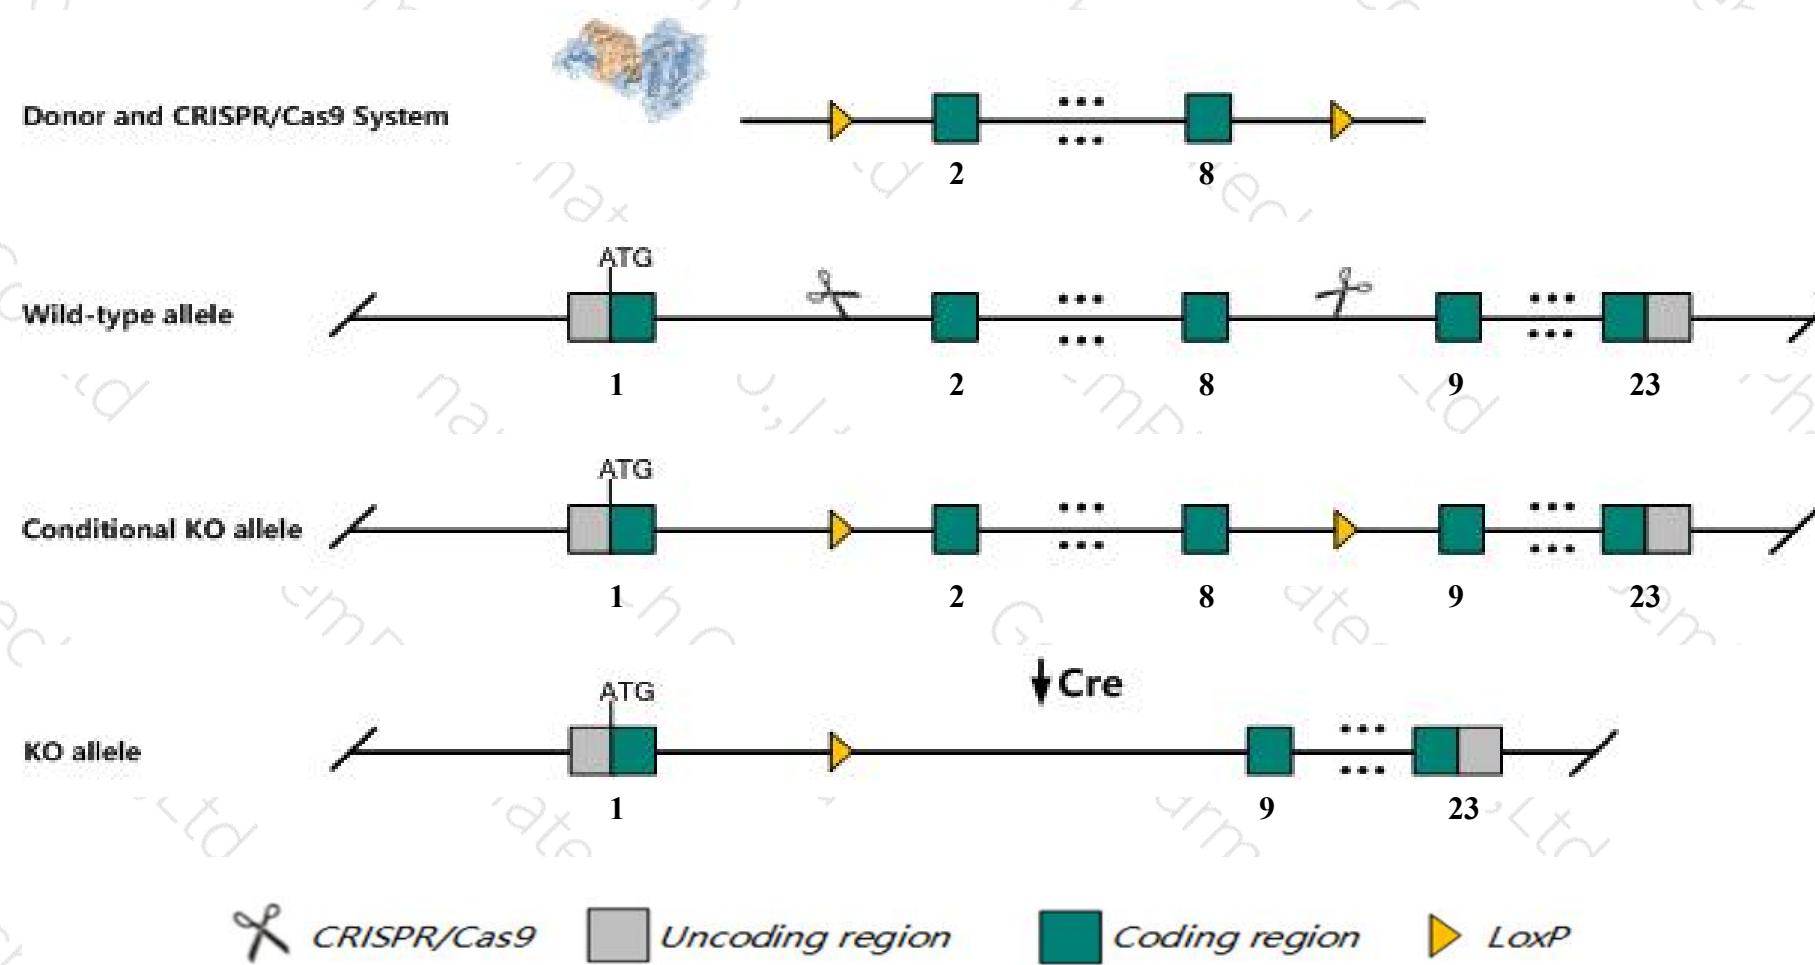

Project Name***Abcf1***

Project type**Cas9-CKO**

Strain background**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Abcf1* gene. The schematic diagram is as follows:

Technical routes

- The *Abcfl* gene has 8 transcripts. According to the structure of *Abcfl* gene, exon2-exon8 of *Abcfl-201* (ENSMUST00000043757.14) transcript is recommended as the knockout region. The region contains 596bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Abcfl* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, Mice homozygous for a null allele display lethality shortly after implantation.
- The KO region contains functional region of the *Abcf1* gene. Knockout the region may affect the function of *Mir877* gene.
- The *Abcf1* gene is located on the Chr17. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Abcf1 ATP-binding cassette, sub-family F (GCN20), member 1 [Mus musculus (house mouse)]

Gene ID: 224742, updated on 13-Mar-2020

Summary

Official Symbol Abcf1 provided by [MGI](#)

Official Full Name ATP-binding cassette, sub-family F (GCN20), member 1 provided by [MGI](#)

Primary source [MGI:MGI:1351658](#)

See related [Ensembl:ENSMUSG00000038762](#)

Gene type protein coding

RefSeq status VALIDATED

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as AU041969, Abc50, D17Wsu166e, GCN20

Expression Ubiquitous expression in testis adult (RPKM 41.9), CNS E11.5 (RPKM 33.3) and 28 other tissues [See more](#)

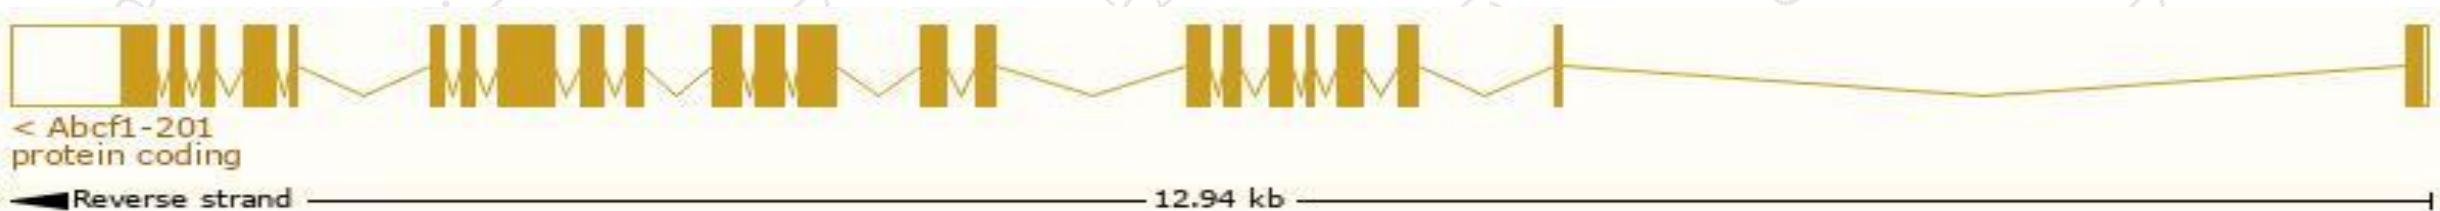

Orthologs [human](#) [all](#)

Transcript information (Ensembl)

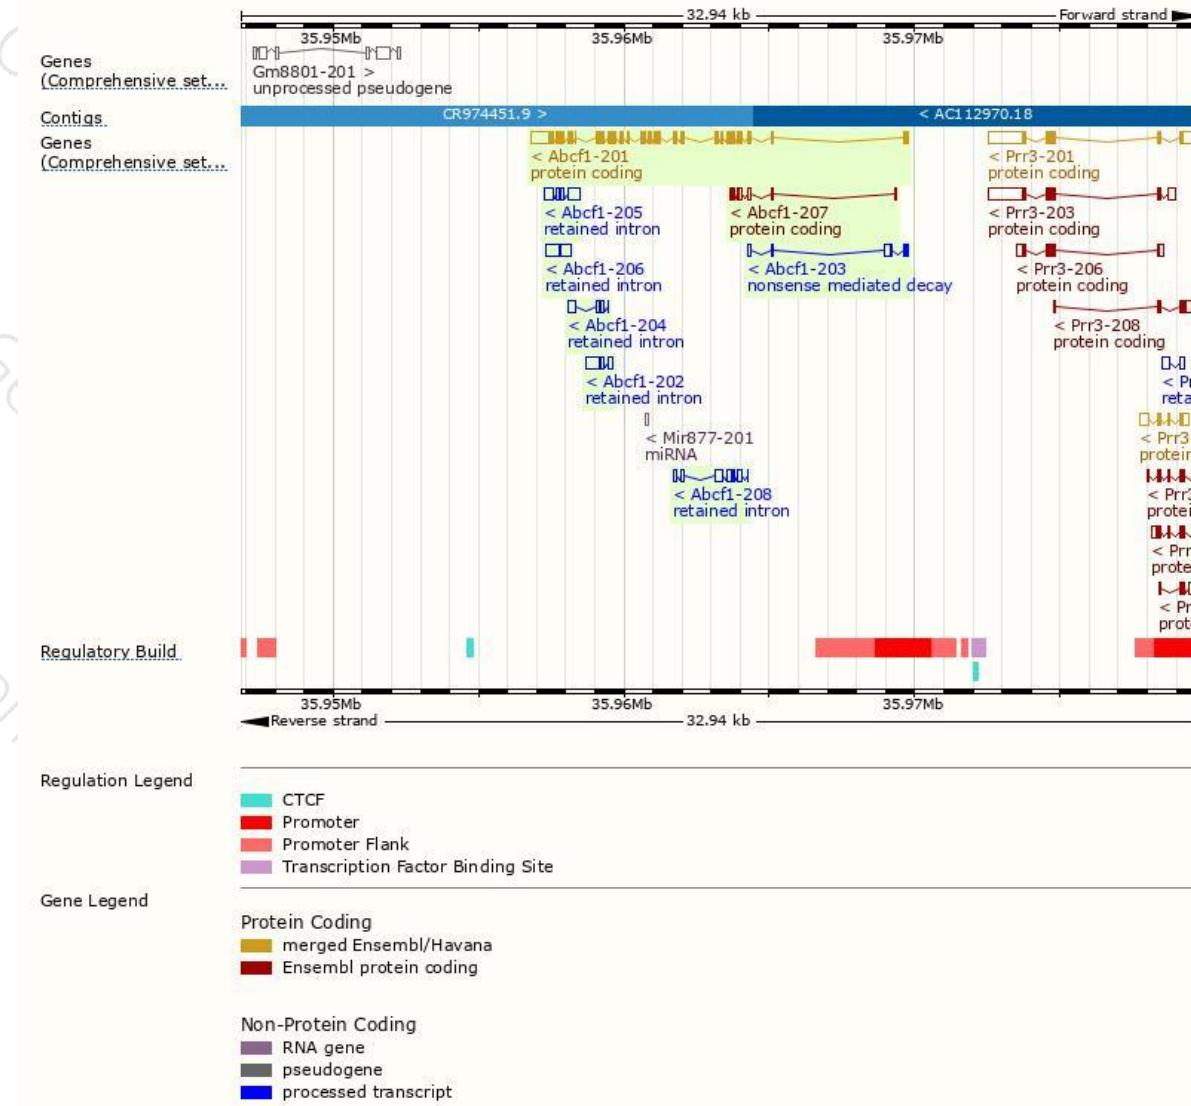

The gene has 8 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Abcf1-201	ENSMUST0000043757.14	3161	837aa	Protein coding	CCDS28713	Q6P542	TSL:1 GENCODE basic APPRIS is a system to annotate alternatively spliced transcripts based on a range of computational methods to identify the most functionally important transcript(s) of a gene. APPRIS P1
Abcf1-207	ENSMUST00000174128.7	376	43aa	Protein coding	-	G3V012	CDS 3' incomplete TSL:5
Abcf1-203	ENSMUST00000172661.1	516	48aa	Nonsense mediated decay	-	G3UYI0	TSL:5

Mouse phenotype description(MGI)

Phenotype Overview

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, Mice homozygous for a null allele display lethality shortly after implantation.
