Project Overview

Project Name

Eef2kmt

Project type

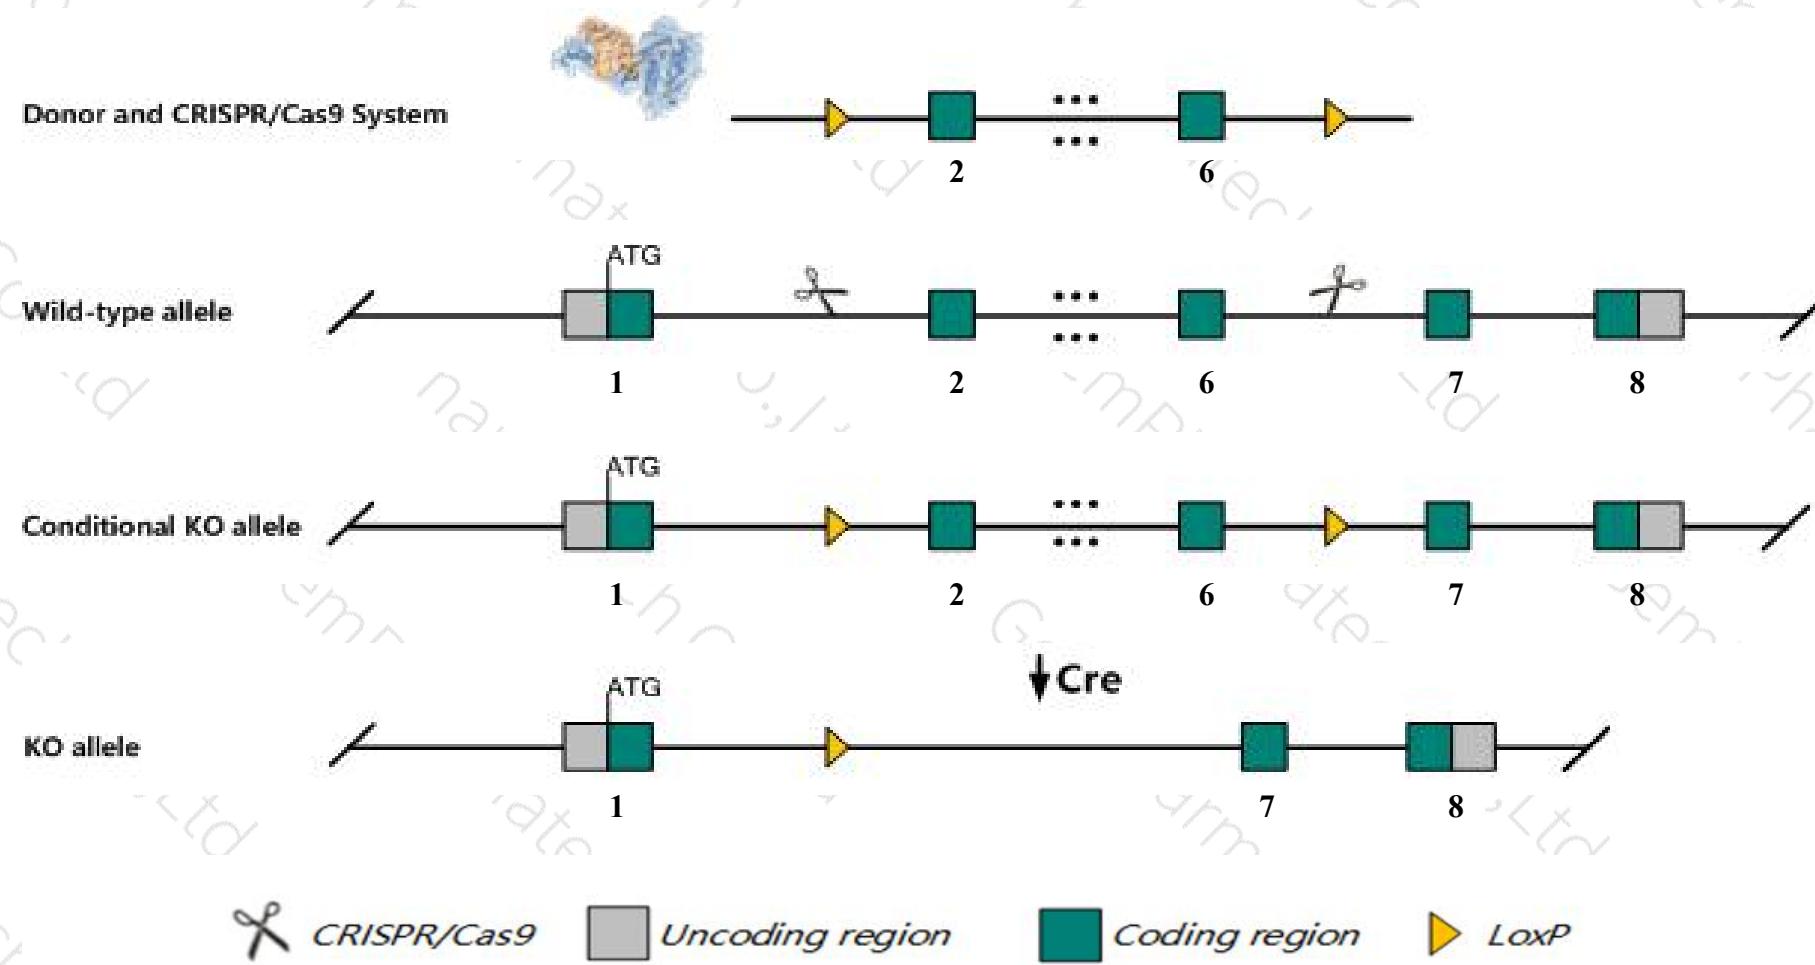

Cas9-CKO

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Eef2kmt* gene. The schematic diagram is as follows:

Technical routes

- The *Eef2kmt* gene has 6 transcripts. According to the structure of *Eef2kmt* gene, exon2-exon6 of *Eef2kmt-201* (ENSMUST00000064635.11) transcript is recommended as the knockout region. The region contains 646bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Eef2kmt* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

GemPharmatech

Notice

- The flox region is about 1.5 kb away from the 5th end of the *Gm15983-201* gene, and its effect is unknown.
- The *Eef2kmt* gene is located on the Chr16. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Eef2kmt eukaryotic elongation factor 2 lysine methyltransferase [Mus musculus (house mouse)]

Gene ID: 70511, updated on 13-Mar-2020

Summary

Official Symbol Eef2kmt provided by [MGI](#)

Official Full Name eukaryotic elongation factor 2 lysine methyltransferase provided by [MGI](#)

Primary source [MGI:MGI:1917761](#)

See related [Ensembl:ENSMUSG00000022544](#)

Gene type protein coding

RefSeq status PROVISIONAL

Organism [Mus musculus](#)

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as 5730409G15Rik, Fam86, Fam86a, eEF2-KMT

Expression Ubiquitous expression in ovary adult (RPKM 25.4), adrenal adult (RPKM 22.4) and 28 other tissues [See more](#)

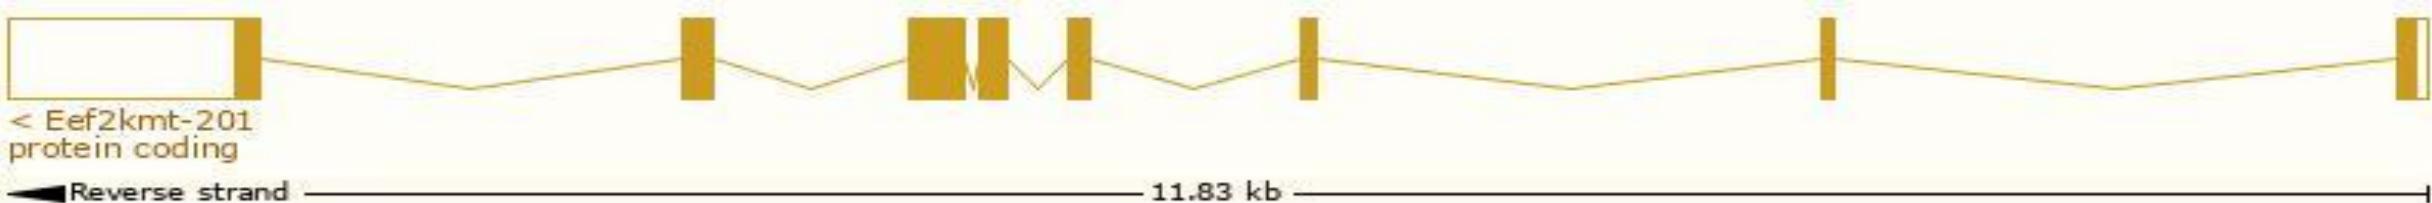

Orthologs [human](#) [all](#)

Transcript information (Ensembl)

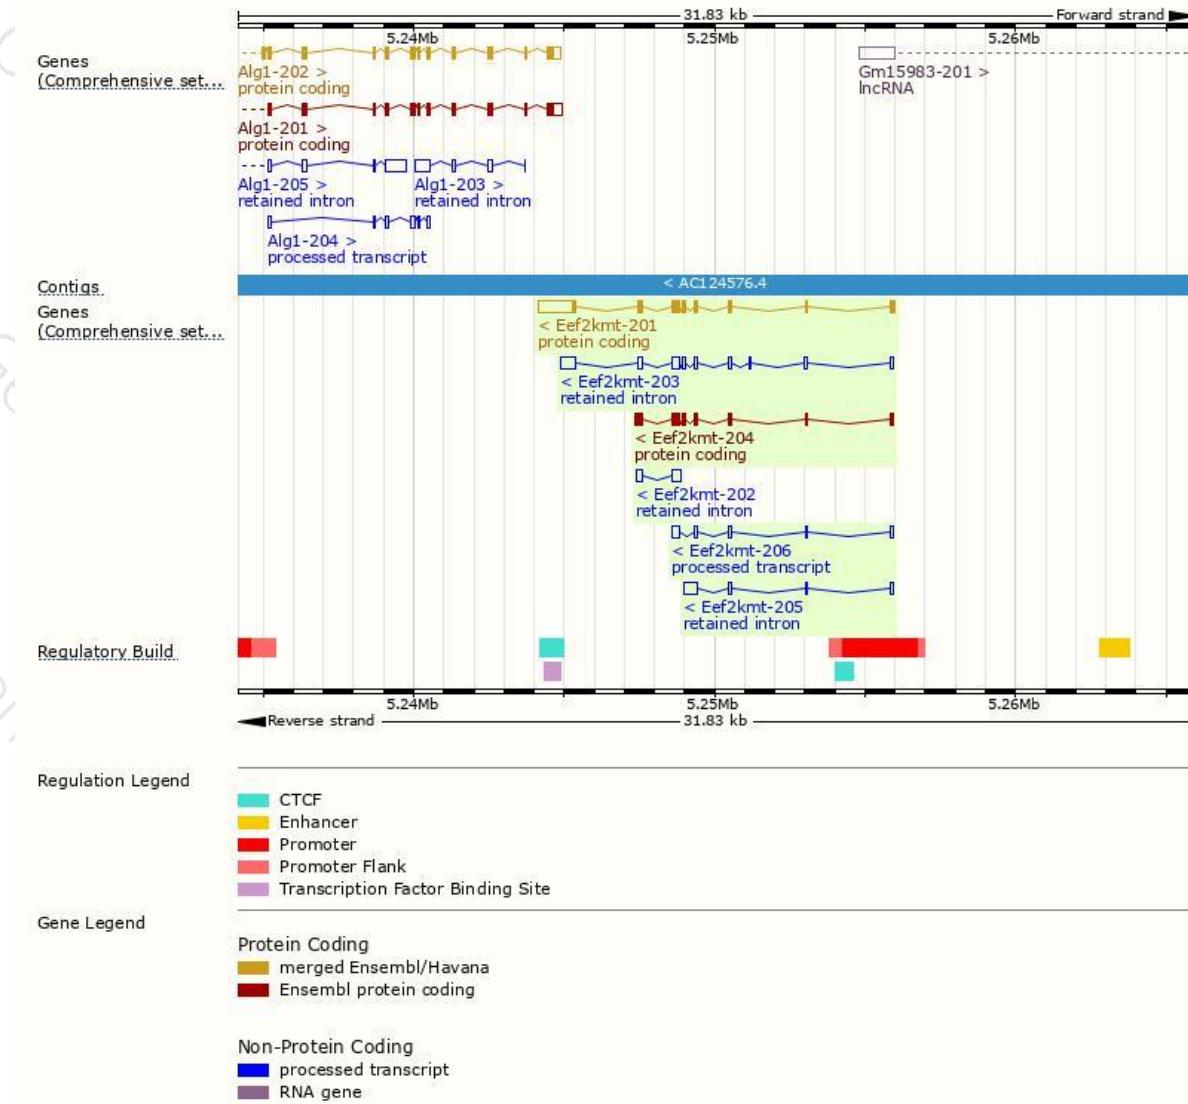

The gene has 6 transcripts, all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Eef2kmt-201	ENSMUST0000064635.11	2170	335aa	Protein coding	CCDS27935	Q3UZW7	TSL:1 GENCODE basic APPRIS is a system to annotate alternatively spliced transcripts based on a range of computational methods to identify the most functionally important transcript(s) of a gene. APPRIS P1
Eef2kmt-204	ENSMUST00000139584.1	987	322aa	Protein coding	-	D3YYE2	CDS 3' incomplete TSL:1
