

Csgalnact2 Cas9-CKO Strategy

Designer: Yanhua Shen

Reviewer: Xueting Zhang

Design Date: 2020-5-7

Project Overview

Project Name

Csgalnact2

Project type

Cas9-CKO

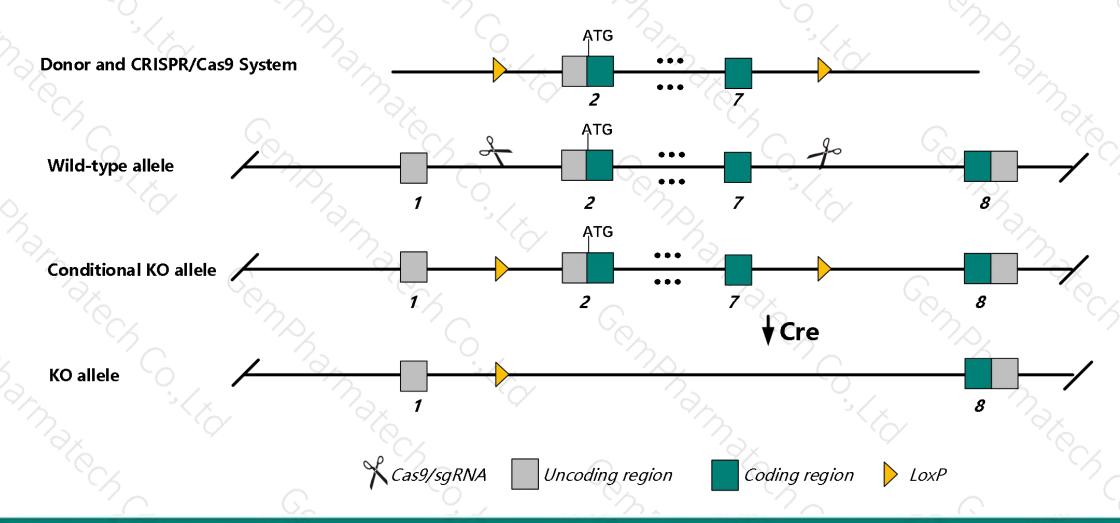

Strain background

C57BL/6JGpt

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the Csgalnact2 gene. The schematic diagram is as follows:

Technical routes

- The Csgalnact2 gene has 3 transcripts. According to the structure of Csgalnact2 gene, exon2-exon7 of Csgalnact2-201 (ENSMUST00000049344.14) transcript is recommended as the knockout region. The region contains start codon ATG. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Csgalnact2* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- > According to the existing MGI data, mice homozygous for a knock-out allele are viable and fertile with no gross abnormalities and normal skeletal morphology.
- > The *Csgalnact2* gene is located on the Chr6. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- ➤ This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Csgalnact2 chondroitin sulfate N-acetylgalactosaminyltransferase 2 [Mus musculus (house mouse)]

Gene ID: 78752, updated on 13-Mar-2020

Summary

☆ ?

Official Symbol Csgalnact2 provided by MGI

Official Full Name chondroitin sulfate N-acetylgalactosaminyltransferase 2 provided by MGI

Primary source MGI:MGI:1926002

See related Ensembl: ENSMUSG00000042042

Gene type protein coding
RefSeq status VALIDATED
Organism Mus musculus

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;

Muroidea; Muridae; Murinae; Mus; Mus

Also known as 4632415D10Rik, Galnact2

Expression Ubiquitous expression in bladder adult (RPKM 6.5), lung adult (RPKM 4.1) and 25 other tissuesSee more

Orthologs human all

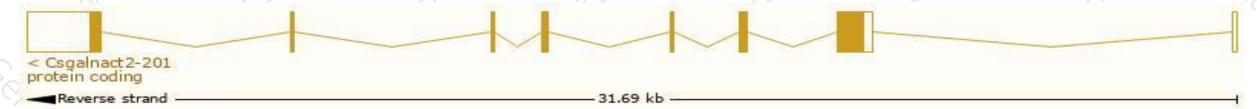

Transcript information (Ensembl)

The gene has 3 transcripts, all transcripts are shown below:

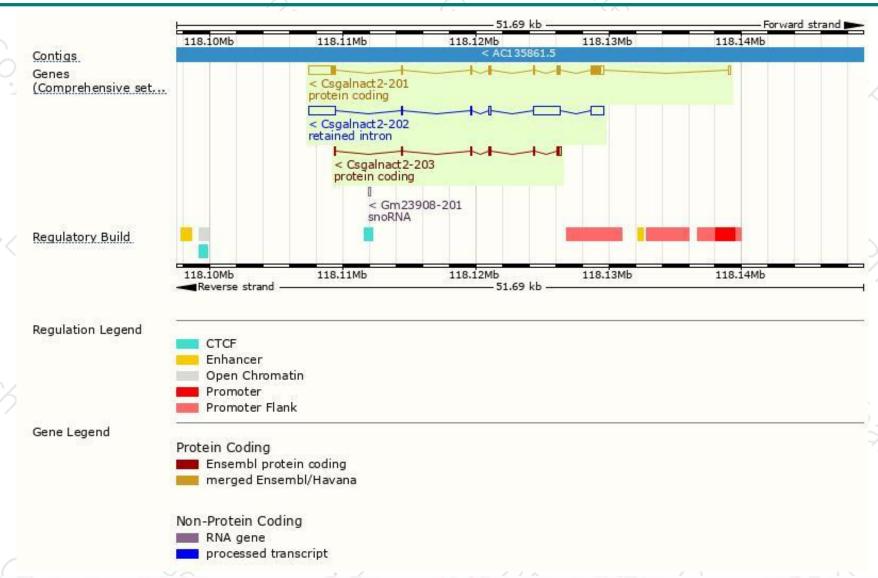

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Csgalnact2-201	ENSMUST00000049344.14	3661	542aa	Protein coding	CCDS20469	Q8C1F4	TSL:1 GENCODE basic APPRIS P1
Csgalnact2-203	ENSMUST00000136265.1	802	223aa	Protein coding	19-	D3Z5Q0	CDS 3' incomplete TSL:2
Csgalnact2-202	ENSMUST00000125531.1	5252	No protein	Retained intron	84	33 4 33	TSL:2

The strategy is based on the design of Csgalnact2-201 transcript, the transcription is shown below:
