

Fgf16 Cas9-CKO Strategy

Designer:

Yanhua Shen

Reviewer:

Xueting Zhang

Design Date:

2020-4-18

Project Overview

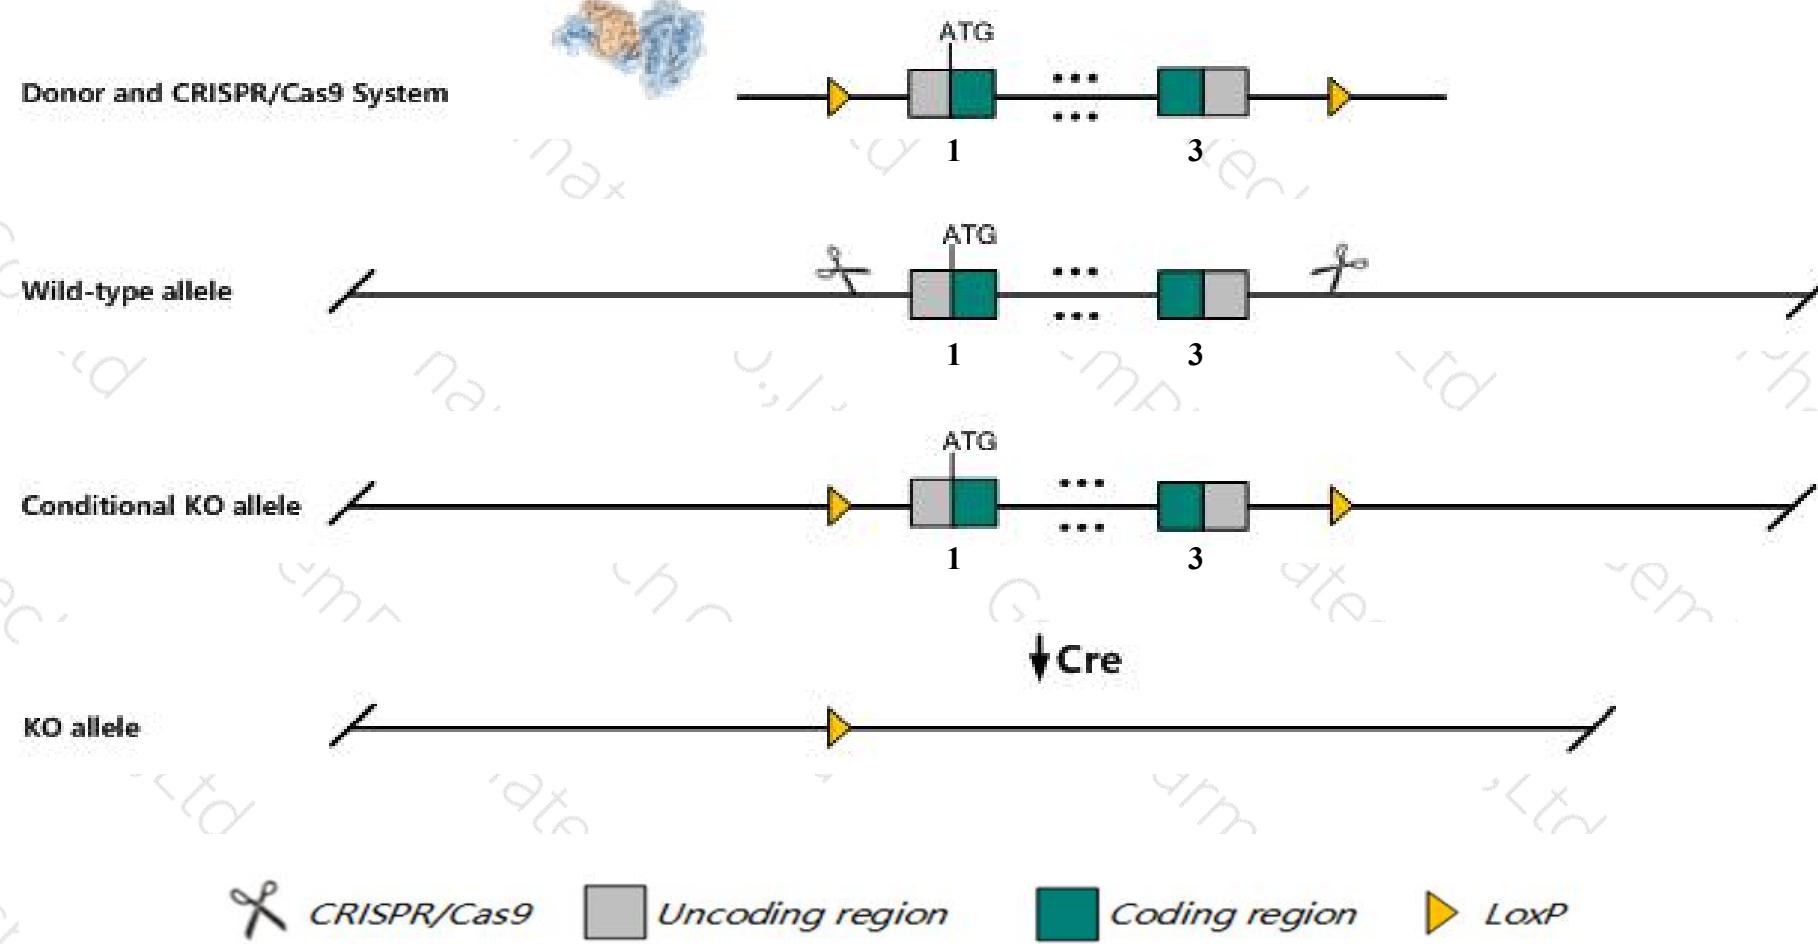

Project Name***Fgf16***

Project type**Cas9-CKO**

Strain background**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Fgf16* gene. The schematic diagram is as follows:

Technical routes

- The *Fgf16* gene has 1 transcript. According to the structure of *Fgf16* gene, exon1-exon3 of *Fgf16-201* (ENSMUST00000033581.3) transcript is recommended as the knockout region. The region contains all of the coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Fgf16* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.
- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data, males hemizygous for one null allele show reduced fetal cardiomyocyte proliferation and postnatal cardiomyocyte numbers. males hemizygous for another null allele die in midgestation with craniofacial and heart defects including cardiac hemorrhage, chamber dilation, thin walls and poor trabeculation.
- The *Fgf16* gene is located on the ChrX. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information (NCBI)

Fgf16 fibroblast growth factor 16 [Mus musculus (house mouse)]

Gene ID: 80903, updated on 13-Mar-2020

Summary

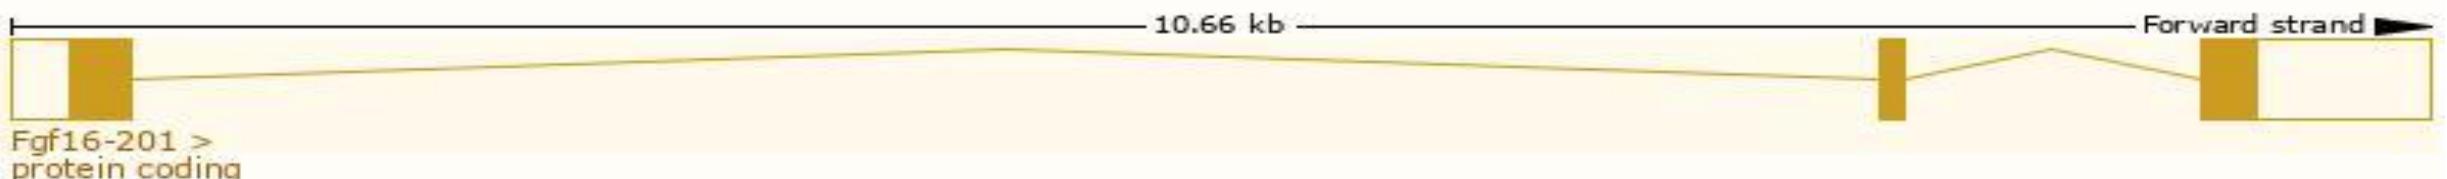

Official Symbol	Fgf16 provided by MGI
Official Full Name	fibroblast growth factor 16 provided by MGI
Primary source	MGI:MGI:1931627
See related	Ensembl:ENSMUSG00000031230
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Expression	Biased expression in heart adult (RPKM 1.9), frontal lobe adult (RPKM 0.4) and 4 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

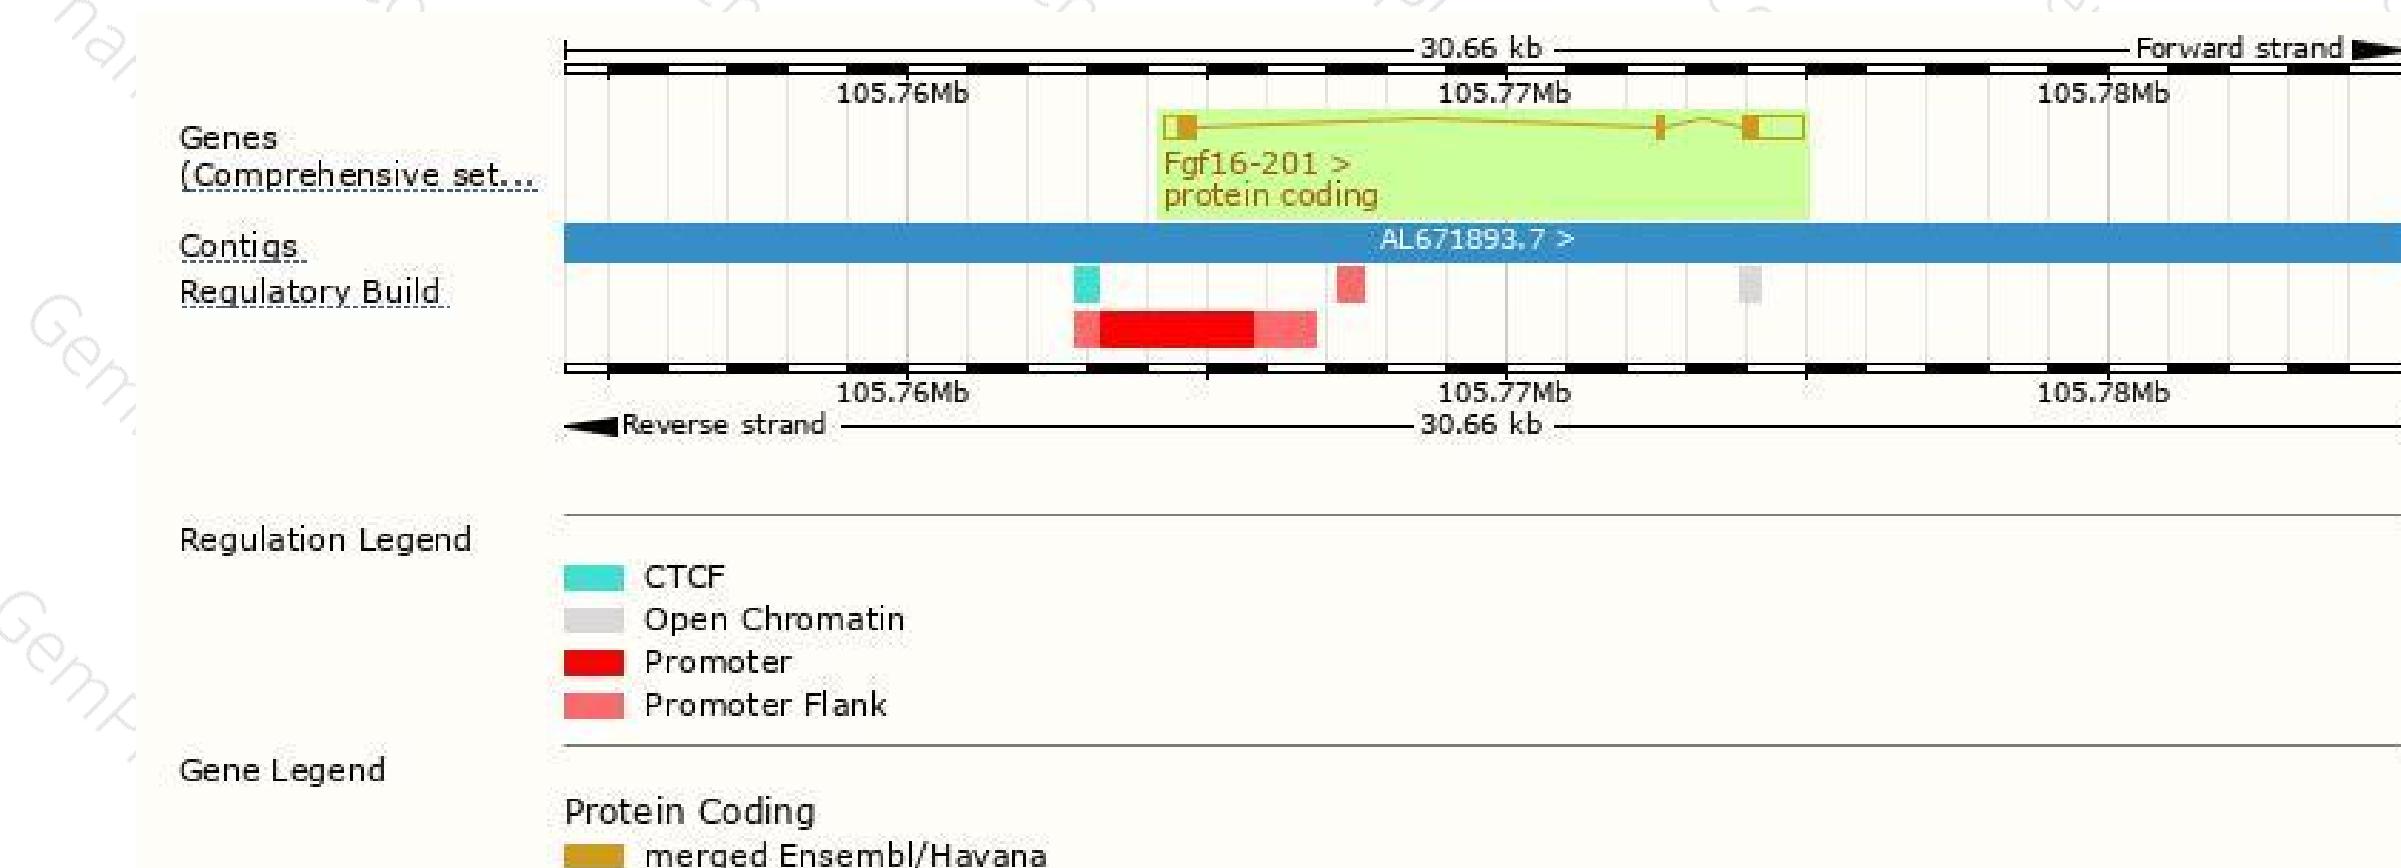

The gene has 1 transcript, and the transcript is shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Fgf16-201	ENSMUST00000033581.3	1645	207aa	Protein coding	CCDS30336	Q9ESL8	TSL:1 GENCODE basic APPRIS P1

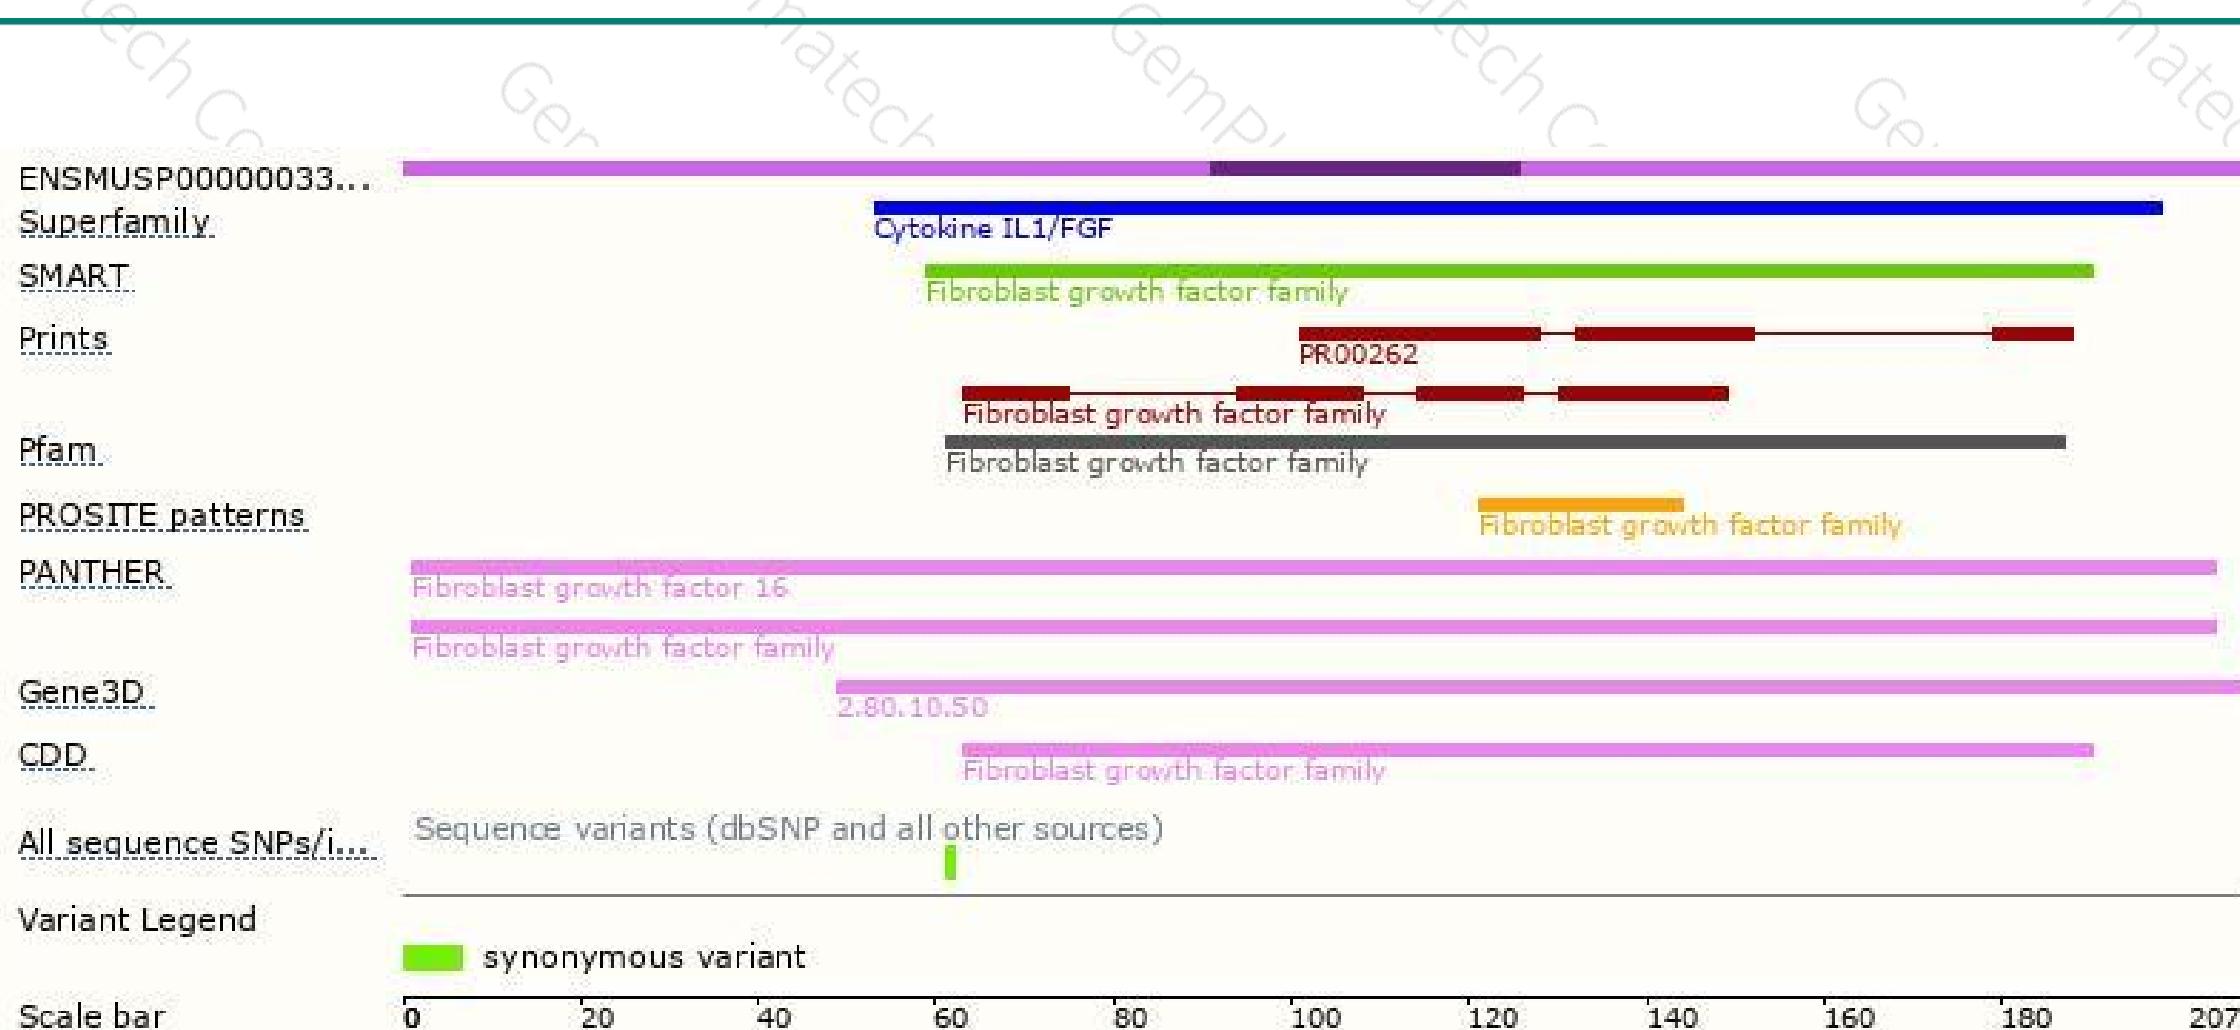

The strategy is based on the design of *Fgf16-201* transcript. The transcription is shown below

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotype Overview

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, males hemizygous for one null allele show reduced fetal cardiomyocyte proliferation and postnatal cardiomyocyte numbers. Males hemizygous for another null allele die in midgestation with craniofacial and heart defects including cardiac hemorrhage, chamber dilation, thin walls and poor trabeculation.
