

Ctnna1 Cas9-KO Strategy

Designer:

Ruirui Zhang

Reviewer:

Huimin Su

Design Date:

2019-11-4

Project Overview

Project Name

Ctnna1

Project type

Cas9-KO

Strain background

C57BL/6JGpt

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Ctnna1* gene. The schematic diagram is as follows:

- The *Ctnna1* gene has 11 transcripts. According to the structure of *Ctnna1* gene, exon4-exon5 of *Ctnna1-201* (ENSMUST00000042345.7) transcript is recommended as the knockout region. The region contains 287bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Ctnna1* gene. The brief process is as follows: CRISPR/Cas9 system

- According to the existing MGI data, homozygous mutation of this gene results in embryonic lethality at the blastocyst stage. A conditional knockout in surface epithelium results in defects in hair follicle development and epidermal morphogenesis.
- Transcript *Cttna1-202* and *Cttna1-203* may not be affected.
- The *Cttna1* gene is located on the Chr18. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gene information (NCBI)

Ctnna1 catenin (cadherin associated protein), alpha 1 [*Mus musculus* (house mouse)]

Gene ID: 12385, updated on 28-Oct-2019

Summary

Official Symbol	Ctnna1 provided by MGI
Official Full Name	catenin (cadherin associated protein), alpha 1 provided by MGI
Primary source	MGI:MGI:88274
See related	Ensembl:ENSMUSG000000037815
Gene type	protein coding
RefSeq status	PROVISIONAL
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	Catna1; AA517462; AI988031; 2010010M04Rik
Expression	Ubiquitous expression in bladder adult (RPKM 52.1), placenta adult (RPKM 48.2) and 28 other tissues See more
Orthologs	human all

Transcript information (Ensembl)

The gene has 11 transcripts,all transcripts are shown below:

Name ▲	Transcript ID ▲	bp ▲	Protein ▲	Biotype ▲	CCDS ▲	UniProt ▲	Flags ▲
Ctnna1-201	ENSMUST00000042345.7	3733	906aa	Protein coding	CCDS29139	P26231 Q545R0	TSL:1 Gencode basic APPRIS P1

Ctnna1-209	ENSMUST00000237475.1	545	No protein	Retained intron	-	-	-
Ctnna1-210	ENSMUST00000237855.1	2542	37aa	Nonsense mediated decay	-	A0A494BA24	-
Ctnna1-211	ENSMUST00000238145.1	667	No protein	Retained intron	-	-	-

The strategy is based on the design of *Ctnna1-201* transcript, the transcription is shown below

Genomic location distribution

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).

According to the existing MGI data, homozygous mutation of this gene results in embryonic lethality at the blastocyst stage. A conditional knockout in surface epithelium results in defects in hair follicle development and epidermal morphogenesis.
