

Cd46 Cas9-KO Strategy

Designer:Xueting Zhang

Reviewer: Yanhua Shen

Date:2020-02-05

Project Overview

Project Name

Cd46

Project type

Cas9-KO

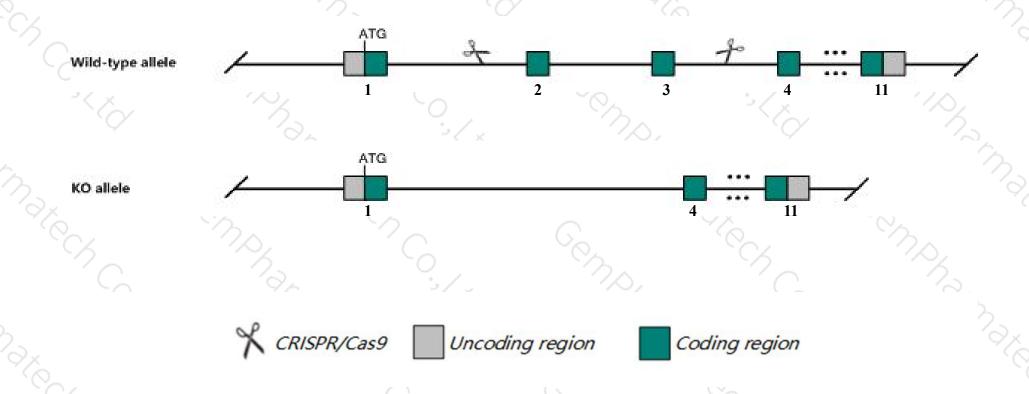

Strain background

C57BL/6JGpt

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Cd46* gene. The schematic diagram is as follows:

Technical routes

- ➤ The *Cd46* gene has 4 transcripts. According to the structure of *Cd46* gene, exon2-exon3 of *Cd46-203*(ENSMUST00000162650.7) transcript is recommended as the knockout region. The region contains 292bp coding sequence. Knock out the region will result in disruption of protein function.
- ➤ In this project we use CRISPR/Cas9 technology to modify *Cd46* gene. The brief process is as follows: CRISPR/Cas9 system

Notice

- ➤ According to the existing MGI data, Homozygous mutation of this gene results in increased litter sizes sired by mutant males. Another homozygous null mouse shows increased susceptibility to induced choroid neovascularization.
- ➤ Transcript *Cd46*-202&204 may not be affected.
- ➤ The knockout region is near to the N-terminal of *Gm37132* gene, this strategy may influence the regulatory function of the N-terminal of *Gm37132* gene.
- The *Cd46* gene is located on the Chr1. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Gene information (NCBI)

Cd46 CD46 antigen, complement regulatory protein [Mus musculus (house mouse)]

Gene ID: 17221, updated on 12-Aug-2019

Summary

☆ ?

Official Symbol Cd46 provided by MGI

Official Full Name CD46 antigen, complement regulatory protein provided by MGI

Primary source MGI:MGI:1203290

See related Ensembl:ENSMUSG00000016493

Gene type protein coding
RefSeq status VALIDATED
Organism Mus musculus

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia;

Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as Mcp

Expression Broad expression in CNS E18 (RPKM 1.4), cortex adult (RPKM 1.4) and 23 other tissues See more

Orthologs <u>human</u> <u>all</u>

Genomic context

Location: 1 H6; 1 98.41 cM

See Cd46 in Genome Data Viewer

Exon count: 16

Protein domain

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, Homozygous mutation of this gene results in increased litter sizes sired by mutant males. Another homozygous null mouse shows increased susceptibility to induced choroid neovascularization.
