

Slc13a2 Cas9-KO Strategy

Designer:Xueting Zhang Reviwer:Yanhua Shen Date:2020-02-13

Project Overview

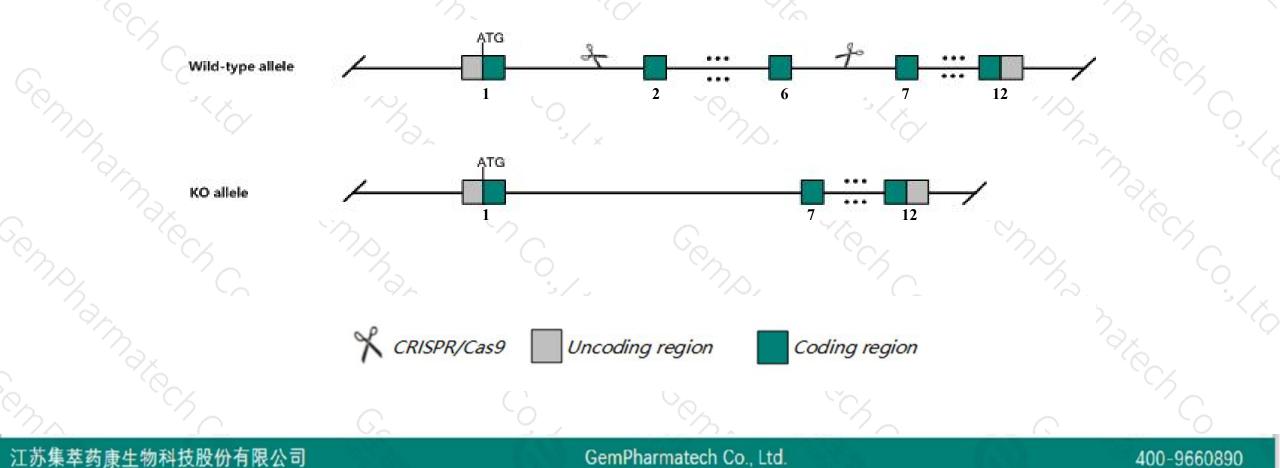

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Slc13a2* gene. The schematic diagram is as follows:

- The Slc13a2 gene has 1 transcript. According to the structure of Slc13a2 gene, exon2-exon6 of Slc13a2-201 (ENSMUST0000001122.5) transcript is recommended as the knockout region. The region contains 761bp coding sequence. Knock out the region will result in disruption of protein function.
- > In this project we use CRISPR/Cas9 technology to modify Slc13a2 gene. The brief process is as follows: CRISPR/Cas9 syste

- According to the existing MGI data, Mice homozygous for a knock-out allele exhibit increased Kreb cycle intermediates in the urine but otherwise have normal kidney function and response to ischemia-reperfusion injury and caloric restriction.
- > Slc13a2os gene will be destroyed in this strategy.
- The Slc13a2 gene is located on the Chr11. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Notice

Gene information (NCBI)

Official Symbol SIc13a2 provided by MGI

SIc13a2 solute carrier family 13 (sodium-dependent dicarboxylate transporter), member 2 [*Mus musculus* (house mouse)]

Gene ID: 20500, updated on 29-Oct-2019

Summary

≈ ?

☆ ?

Official Oyfinbol	Cicrodz provided by Mor
Official Full Name	solute carrier family 13 (sodium-dependent dicarboxylate transporter), member 2 provided by MGI
Primary source	MGI:MGI:1276558
See related	Ensembl:ENSMUSG0000001095
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Also known as	Nadc1; Nadc-1; mNaDC-1
Expression	Biased expression in colon adult (RPKM 77.1), large intestine adult (RPKM 68.5) and 3 other tissues See more
Orthologs	human all

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, Mice homozygous for a knock-out allele exhibit increased Kreb cycle intermediates in the urine but otherwise have normal kidney function and response to ischemia-reperfusion injury and caloric restriction.
