Project Overview

This model will use CRISPR/Cas9 technology to edit the Cdh18 gene. The schematic diagram is as follows:

江苏集萃药康生物科技股份有限公司

GemPharmatech Co., Ltd.

400-9660890

- The Cdh18 gene has 7 transcripts. According to the structure of Cdh18 gene, exon3 of Cdh18-203 (ENSMUST00000164787.7) transcript is recommended as the knockout region. The region contains 295bp coding sequence. Knock out the region will result in disruption of protein function.
- > In this project we use CRISPR/Cas9 technology to modify Cdh18 gene. The brief process is as follows: CRISPR/Cas9 system

- The Cdh18 gene is located on the Chr15. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.
