

# Aldh9a1 Cas9-KO Strategy

Designer: Reviewer: Design Date: JiaYu Xiaojing Li 2020-3-5

## **Project Overview**

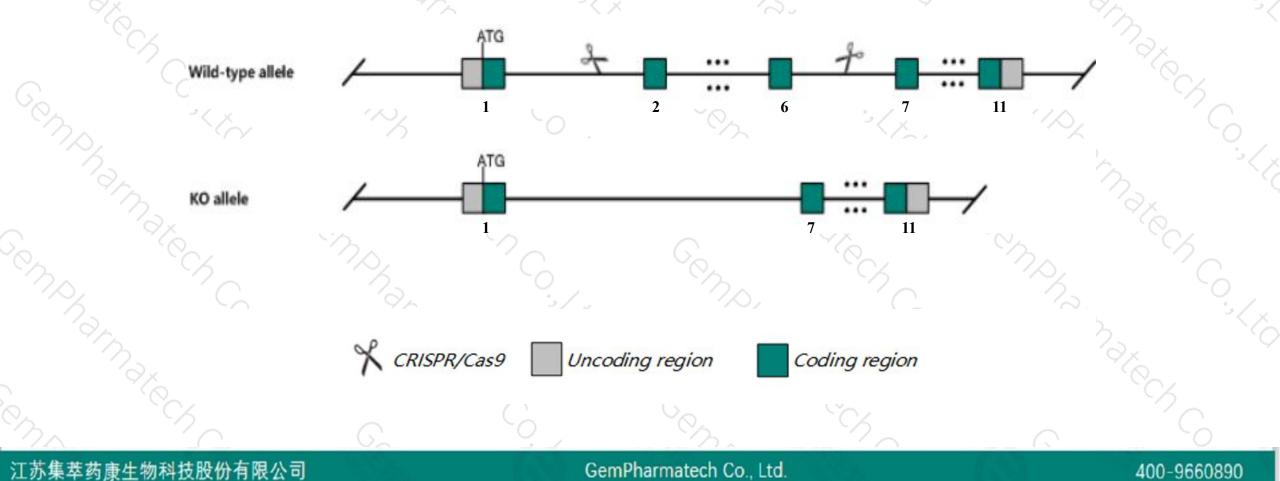

# **Knockout strategy**

This model will use CRISPR/Cas9 technology to edit the *Aldh9a1* gene. The schematic diagram is as follows:

- The Aldh9a1 gene has 4 transcripts. According to the structure of Aldh9a1 gene, exon2-exon6 of Aldh9a1-201 (ENSMUST0000028004.10) transcript is recommended as the knockout region. The region contains 749bp coding sequence. Knock out the region will result in disruption of protein function.
- > In this project we use CRISPR/Cas9 technology to modify Aldh9a1 gene. The brief process is as follows: CRISPR/Cas9 syste

- The Aldh9a1 gene is located on the Chr1. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This Strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

### Aldh9a1 aldehyde dehydrogenase 9, subfamily A1 [Mus musculus (house mouse)]

Gene ID: 56752, updated on 3-Feb-2019

#### Summary

Official Symbol	Aldh9a1 provided by MGI
Official Full Name	aldehyde dehydrogenase 9, subfamily A1 provided byMGI
<b>Primary source</b>	MGI:MGI:1861622
See related	Ensembl:ENSMUSG0000026687
Gene type	protein coding
<b>RefSeq status</b>	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha;
	Muroidea; Muridae; Murinae; Mus; Mus
Also known as	AA139417, Abaldh, ESTM40, TMABA-DH, Tmabadh
Expression	Ubiquitous expression in kidney adult (RPKM 54.7), liver adult (RPKM 50.7) and 28 other tissues See more
Orthologs	human all
