Project Overview

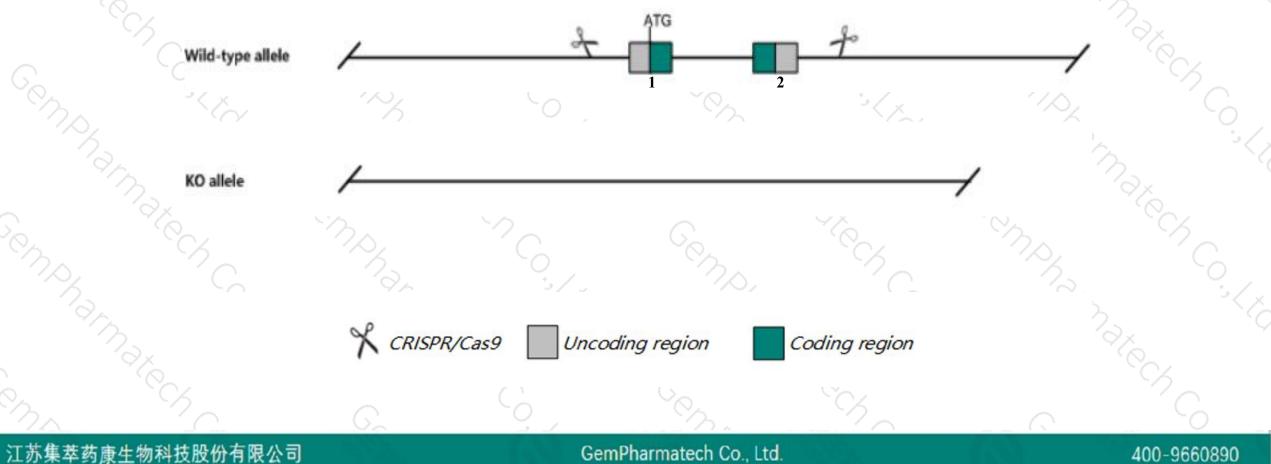

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the C1ql2 gene. The schematic diagram is as follows:

物科技股份有限公司 江苏集萃药康生

- The C1ql2 gene has 1 transcript. According to the structure of C1ql2 gene, exon1-exon2 of C1ql2-201 (ENSMUST00000037286.9) transcript is recommended as the knockout region. The region contains all of the coding sequence. Knock out the region will result in disruption of protein function.
- > In this project we use CRISPR/Cas9 technology to modify C1ql2 gene. The brief process is as follows: CRISPR/Cas9 system

- The Clql2 gene is located on the Chr1. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.
