

# ***Stk36* Cas9-KO Strategy**

**Designer: Huimin Su**

**Reviewer: Ruiuri Zhang**

**Design Date: 2020-7-23**

# Project Overview

**Project Name**

***Stk36***

**Project type**

**Cas9-KO**

**Strain background**

**C57BL/6JGpt**

# Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Stk36* gene. The schematic diagram is as follows:

- The *Stk36* gene has 9 transcripts. According to the structure of *Stk36* gene, exon6-exon10 of *Stk36-201*(ENSMUST00000087183.10) transcript is recommended as the knockout region. The region contains 802bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Stk36* gene. The brief process is as follows: CRISPR/Cas9 system were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- According to the existing MGI data, nullizygous mutations cause postnatal growth defects and lethality. Homozygotes for a null allele show hydrocephaly, cranial defects, otitis media and sterility. Homozygotes for another null allele show additional defects in lung and renal development, thymus and spleen atrophy, rhinitis and ataxia.
- Transcript *Stk36-203* is incomplete, so the effect on it is unknown.
- The *Stk36* gene is located on the Chr1. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

# Gene information (NCBI)

## Stk36 serine/threonine kinase 36 [ *Mus musculus* (house mouse) ]

Gene ID: 269209, updated on 26-Jun-2020

### Summary

|                    |                                                                                                                                                                           |

The strategy is based on the design of *Stk36-201* transcript,the transcription is shown below:

# Genomic location distribution

# Protein domain

# Mouse phenotype description(MGI)

*Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).*

According to the existing MGI data, nullizygous mutations cause postnatal growth defects and lethality. Homozygotes for a null allele show hydrocephaly, cranial defects, otitis media and sterility. Homozygotes for another null allele show additional defects in lung and renal development, thymus and spleen atrophy, rhinitis and ataxia.
