

Pkp2 Cas9-KO Strategy

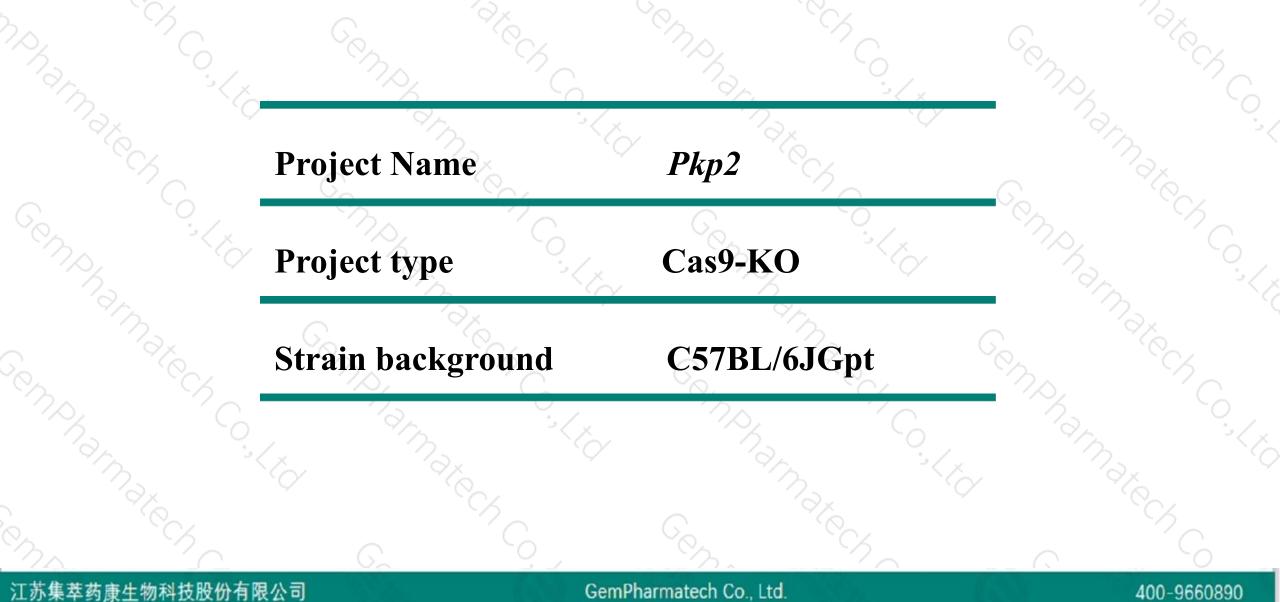

Designer: JiaYu

Reviewer: Xiaojing Li

Design Date: 2020-7-21

Project Overview

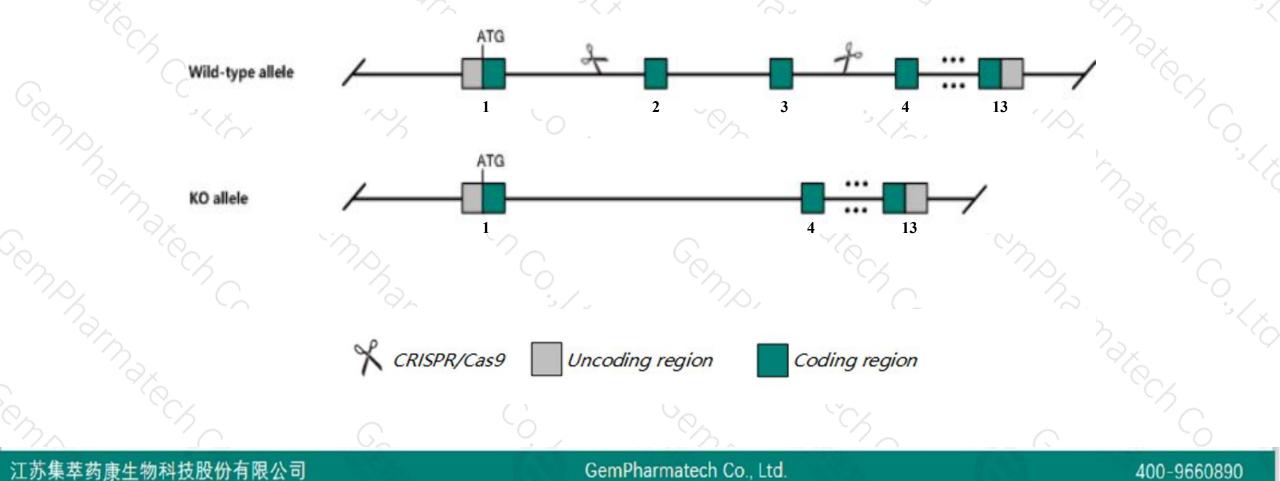

Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Pkp2* gene. The schematic diagram is as follows:

> The *Pkp2* gene has 3 transcripts. According to the structure of *Pkp2* gene, exon2-exon3 of *Pkp2*-201(ENSMUST00000039408.2) transcript is recommended as the knockout region. The region contains 685bp coding sequence. Knock out the region will result in disruption of protein function.

> In this project we use CRISPR/Cas9 technology to modify Pkp2 gene. The brief process is as follows: CRISPR/Cas9 system were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- > According to the existing MGI data, homozygous null mice display embryonic lethality with impaired heart formation, hemopericardium, and hemoperitoneum.
- The *Pkp2* gene is located on the Chr16. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
 This strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

Pkp2 plakophilin 2 [Mus musculus (house mouse)]

Gene ID: 67451, updated on 13-Mar-2020

Summary

Official Symbol Pkp2 provided by <u>MGI</u> Official Full Name plakophilin 2 provided by<u>MGI</u>

Primary source <u>MGI:MGI:1914701</u>

See related Ensembl:ENSMUSG00000041957

Gene type protein coding

RefSeq status VALIDATED

Organism <u>Mus musculus</u>

Lineage Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus

Also known as 1200008D14Rik, 1200012P04Rik, AA516617, Pkp21

Expression Broad expression in placenta adult (RPKM 32.2), heart adult (RPKM 24.0) and 16 other tissues<u>See more</u> Orthologs <u>human all</u>

orthologs <u>numan</u> all

Transcript information (Ensembl)

The gene has 3 transcripts, all transcripts are shown below:

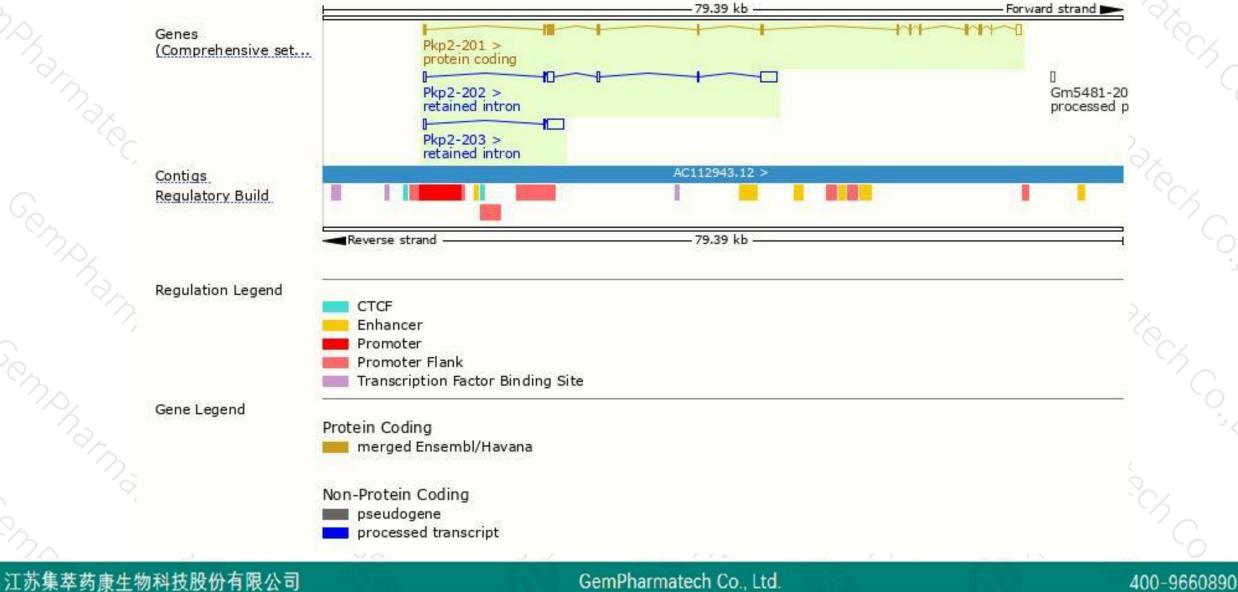

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Pkp2-201	ENSMUST0000039408.2	2918	<u>795aa</u>	Protein coding	CCDS27981	<u>Q9CQ73</u>	TSL:1 GENCODE basic APPRIS P1
Pkp2-202	ENSMUST00000161342.7	2931	No protein	Retained intron	-	-	TSL:1
Pkp2-203	ENSMUST00000162150.7	1959	No protein	Retained intron	2	122	TSL:1

The strategy is based on the design of *Pkp2-201* transcript, the transcription is shown below:

Mouse phenotype description(MGI)

Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data, homozygous null mice display embryonic lethality with impaired heart formation, hemopericardium, and hemoperitoneum.
