

# ***Zglp1* Cas9-KO Strategy**

**Designer: JiaYu**

**Reviewer: Xiaojing Li**

**Design Date: 2020-8-6**

# Project Overview

**Project Name**

***Zglp1***

**Project type**

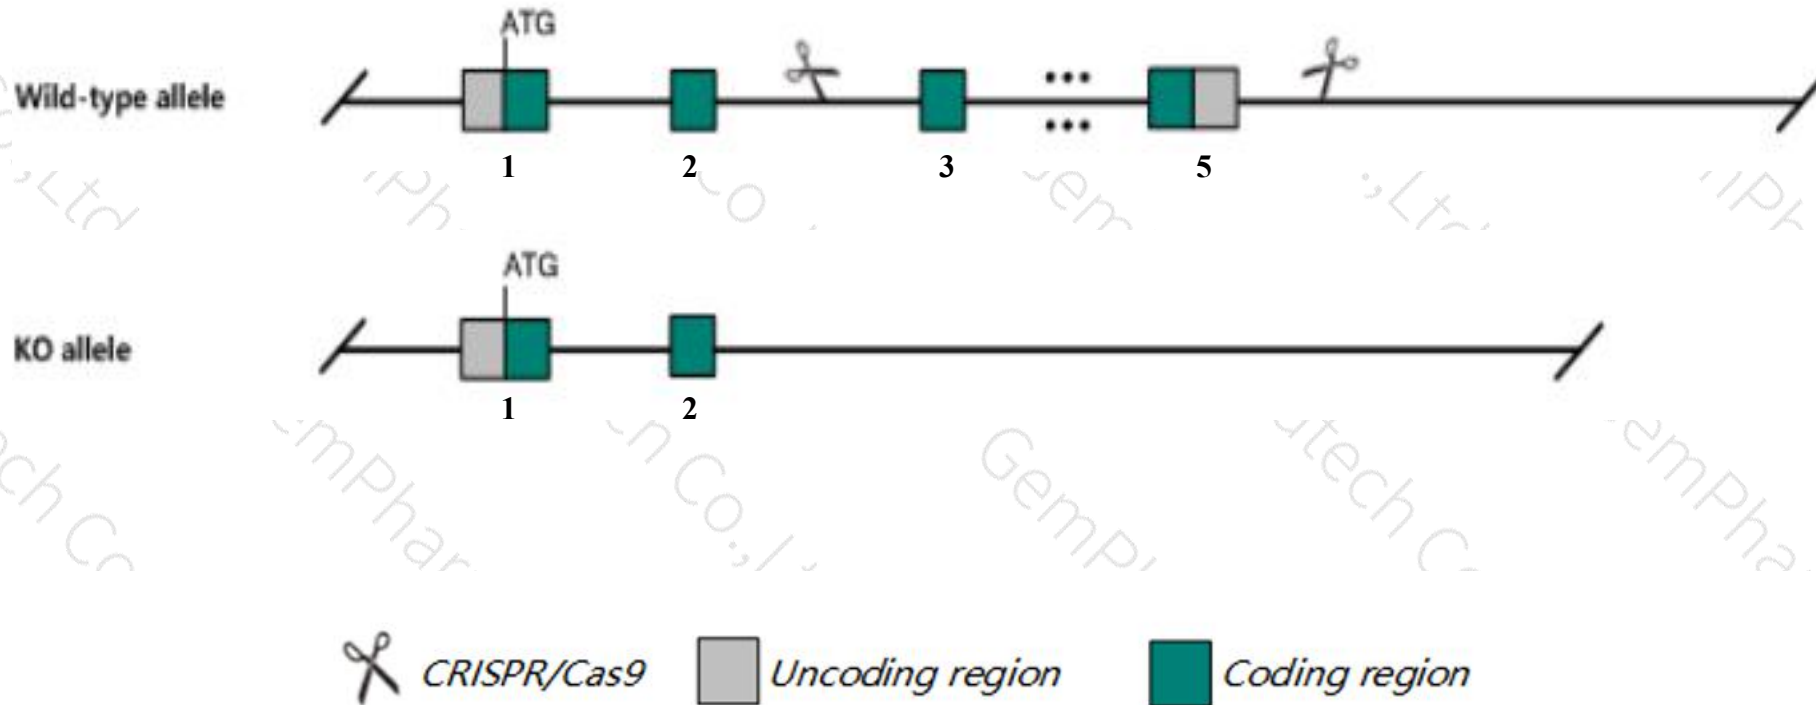

**Cas9-KO**

**Strain background**

**C57BL/6JGpt**

# Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Zglp1* gene. The schematic diagram is as follows:

- The *Zglp1* gene has 2 transcripts. According to the structure of *Zglp1* gene, exon3-exon5 of *Zglp1-201*(ENSMUST00000115494.2) transcript is recommended as the knockout region. The region contains 307bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Zglp1* gene. The brief process is as follows: CRISPR/Cas9 system were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- According to the existing MGI data, mutations result in female and male infertility due to failure of germ cell development.
- Some amino acids will remain at the N-terminus and some functions may be retained.
- The *Zglp1* gene is located on the Chr9. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

# Gene information (NCBI)

## Zglp1 zinc finger, GATA-like protein 1 [Mus musculus (house mouse)]

Gene ID: 100009600, updated on 13-Mar-2020

### Summary

<b>Official Symbol</b>	Zglp1 provided by <a href="#">MGI</a>
<b>Official Full Name</b>	zinc finger, GATA-like protein 1 provided by <a href="#">MGI</a>
<b>Primary source</b>	<a href="#">MGI:MGI:3696042</a>
<b>See related</b>	<a href="#">Ensembl:ENSMUSG00000079681</a>
<b>Gene type</b>	protein coding
<b>RefSeq status</b>	VALIDATED
<b>Organism</b>	<a href="#">Mus musculus</a>
<b>Lineage</b>	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
<b>Also known as</b>	Glp1
<b>Expression</b>	Ubiquitous expression in whole brain E14.5 (RPKM 1.2), CNS E14 (RPKM 1.2) and 27 other tissues <a href="#">See more</a>
<b>Orthologs</b>	<a href="#">human</a> <a href="#">all</a>

# Transcript information (Ensembl)

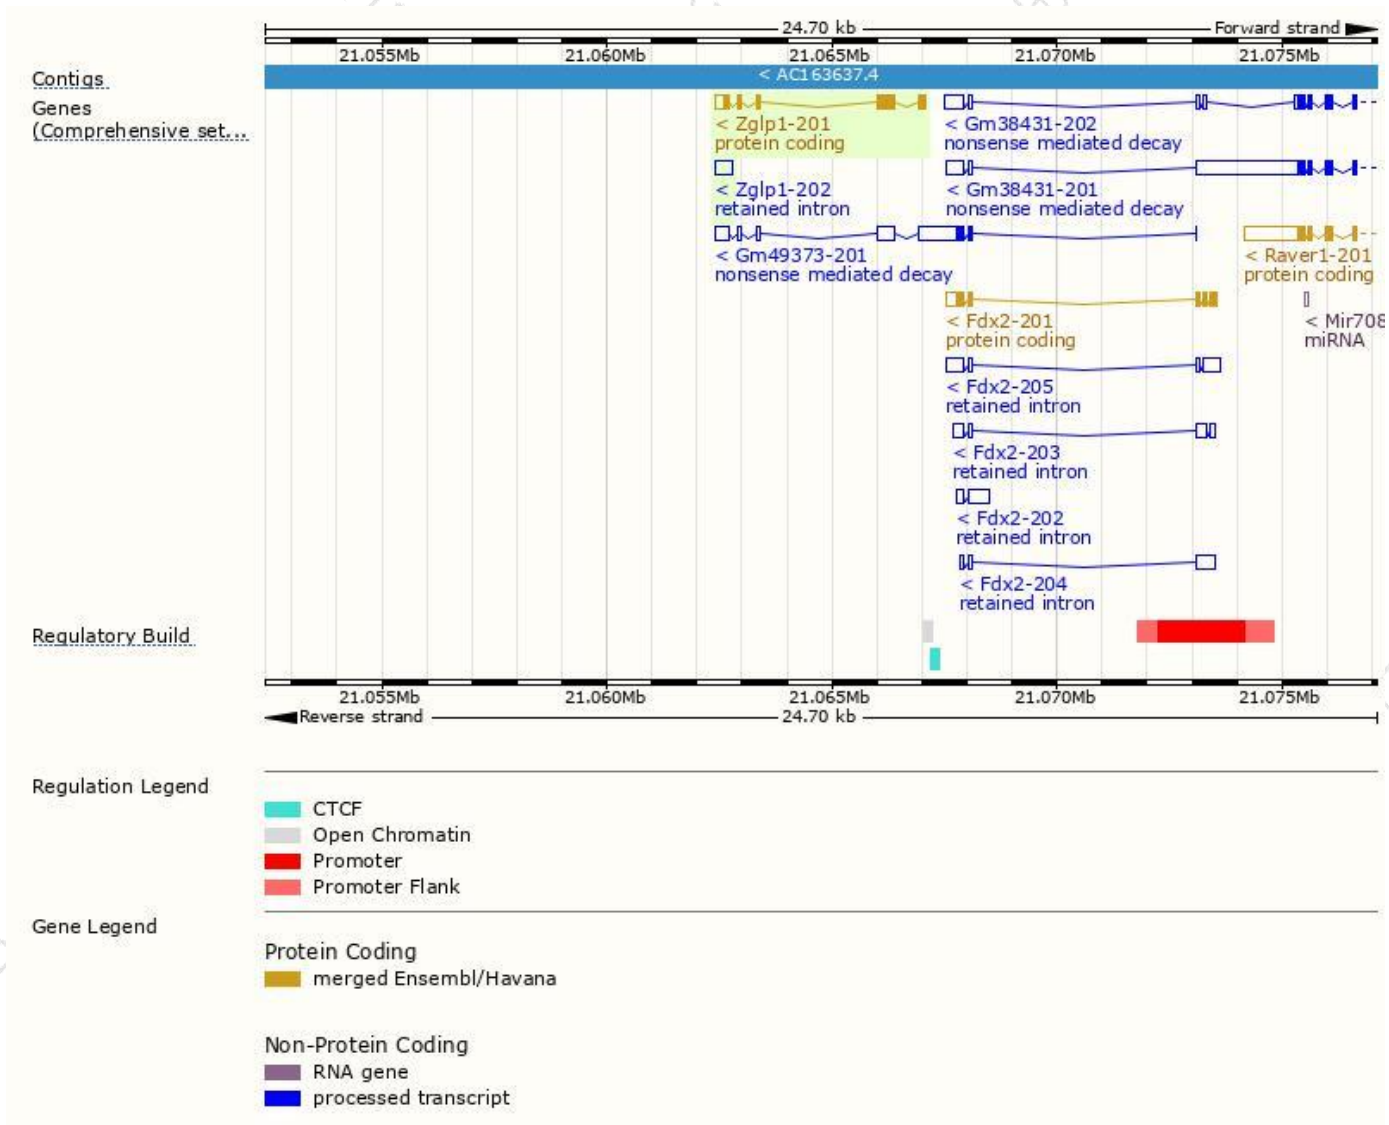

The gene has 2 transcripts,all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Zglp1-201	<a href="#">ENSMUST00000115494.2</a>	1010	<a href="#">266aa</a>	Protein coding	<a href="#">CCDS40549</a>	<a href="#">Q1WG82</a>	TSL:1 GENCODE basic APPRIS P1
Zglp1-202	<a href="#">ENSMUST00000216967.1</a>	401	No protein	Retained intron	-	-	TSL:NA

The strategy is based on the design of *Zglp1-201* transcript,the transcription is shown below:

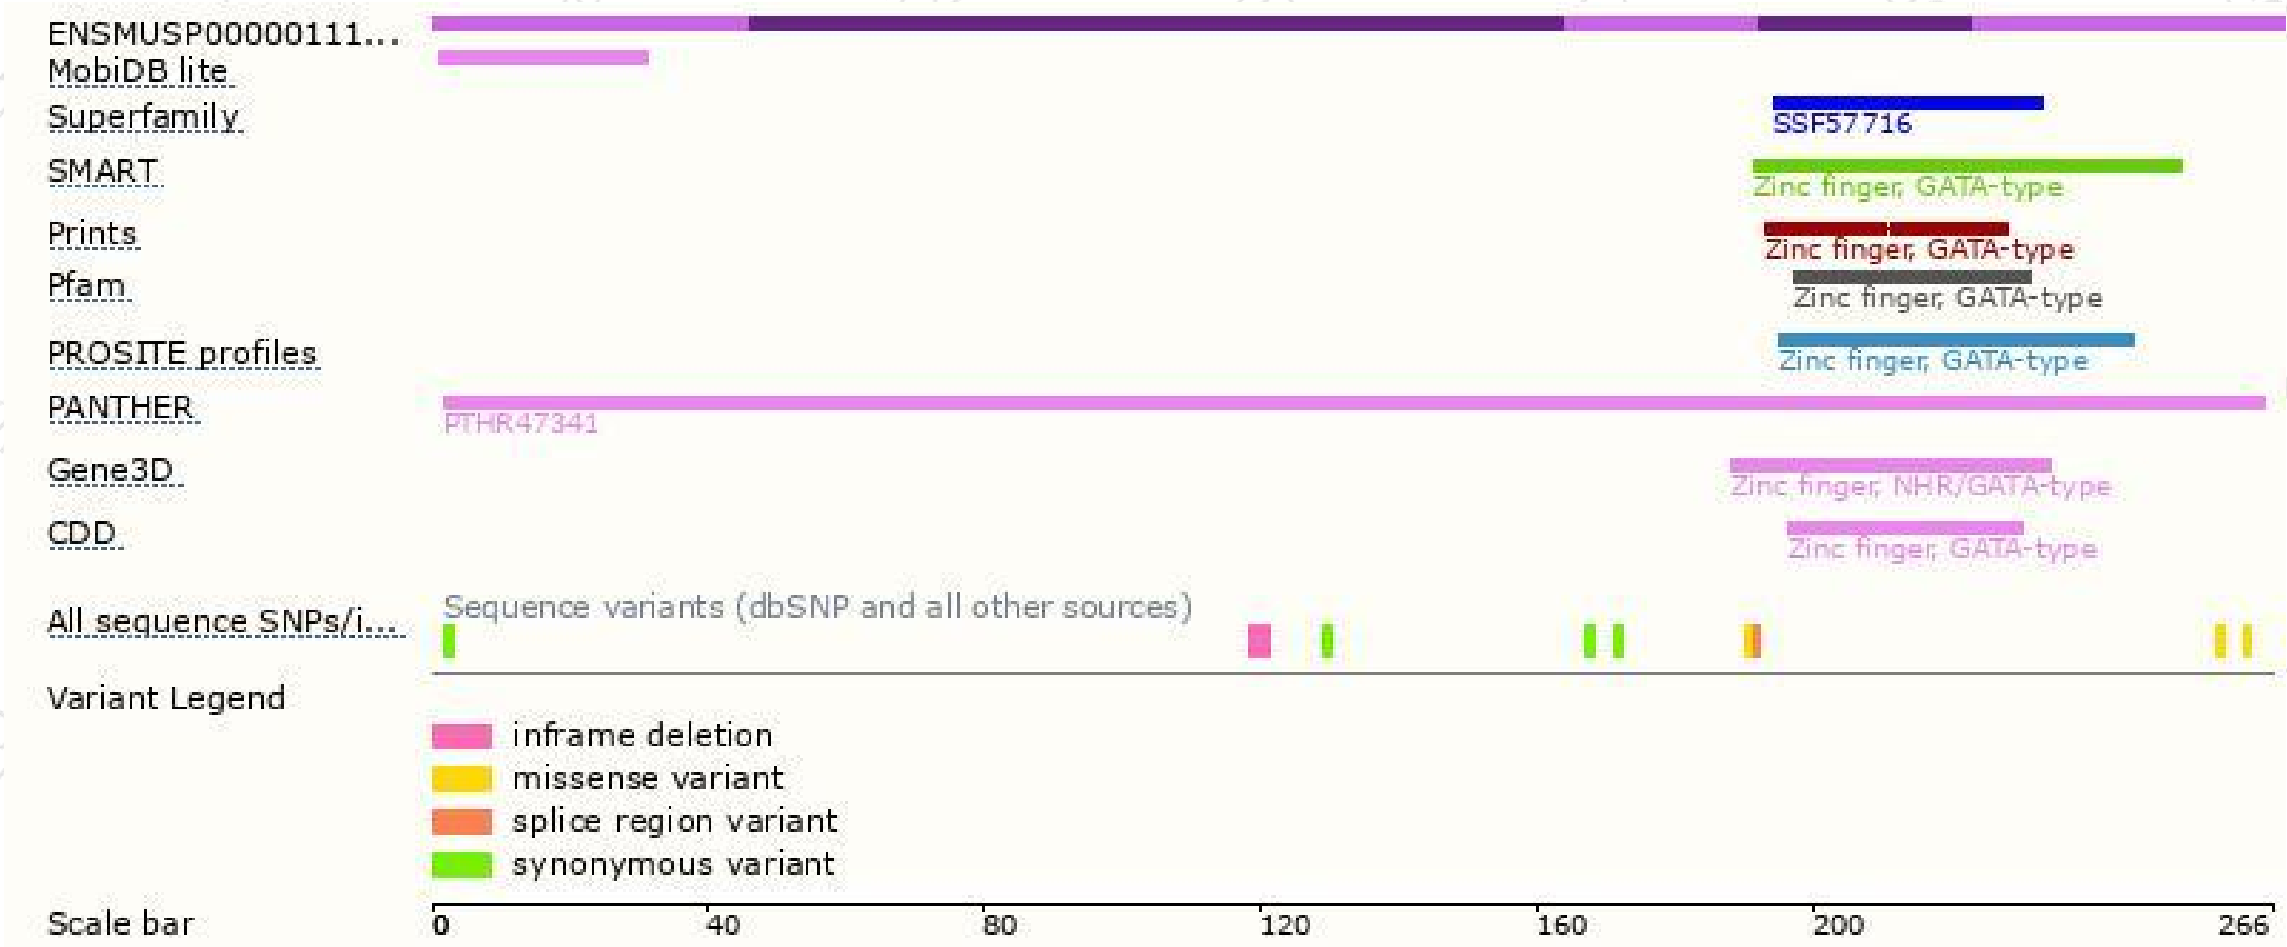

# Genomic location distribution

# Protein domain

# Mouse phenotype description(MGI )

*Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).*

According to the existing MGI data, mutations result in female and male infertility due to failure of germ cell development.
