

# *Kptn* Cas9-KO Strategy

**Designer: Zihe Cui**

**Reviewer: Daohua Xu**

**Design Date: 2020-9-18**

# Project Overview

**Project Name**

*Kptn*

**Project type**

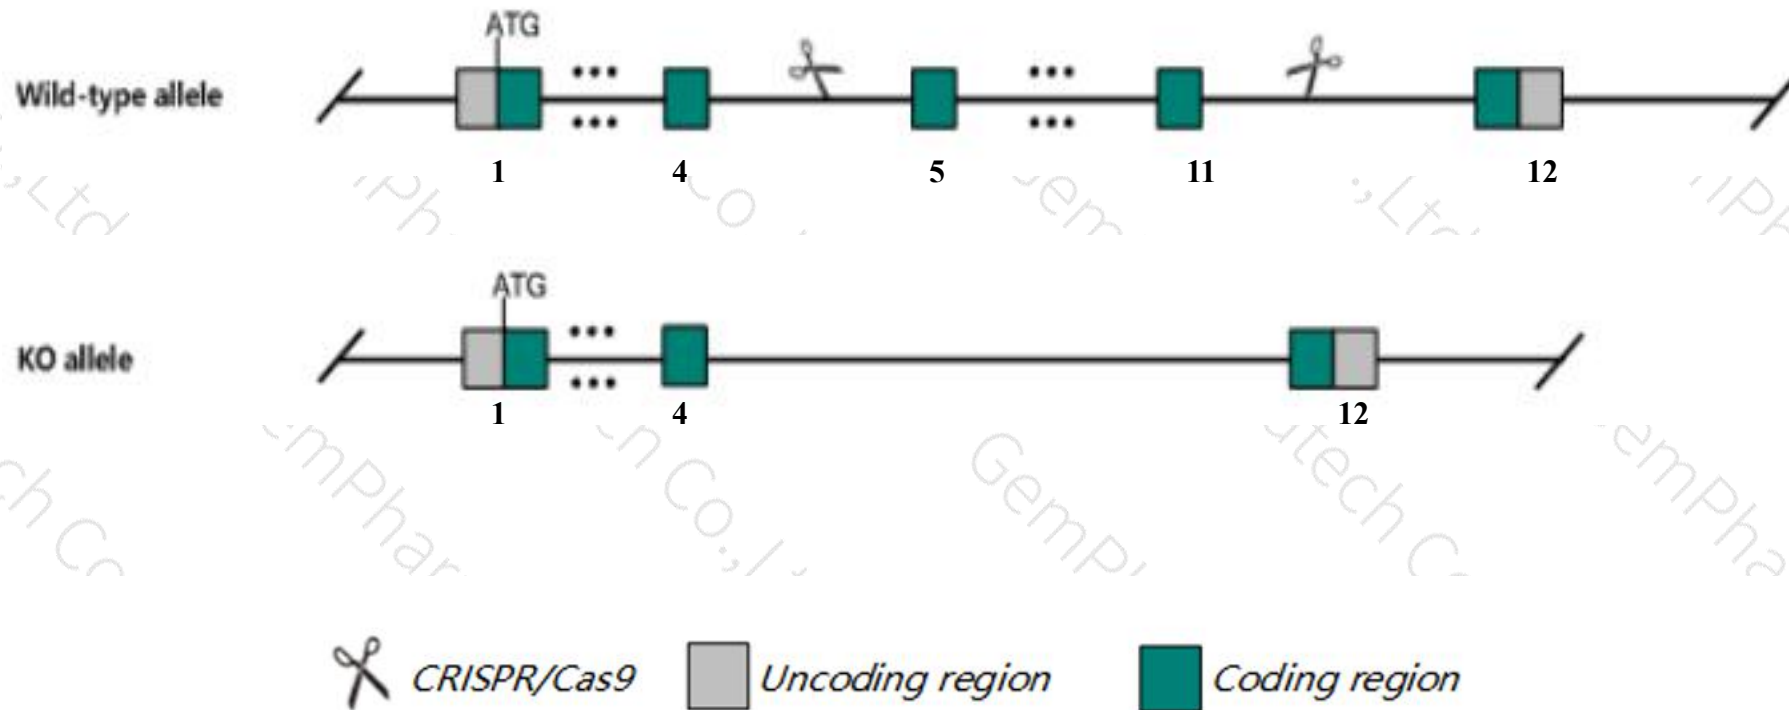

**Cas9-KO**

**Strain background**

**C57BL/6JGpt**

# Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Kptn* gene. The schematic diagram is as follows:

- The *Kptn* gene has 8 transcripts. According to the structure of *Kptn* gene, exon5-exon11 of *Kptn-201*(ENSMUST00000006178.4) transcript is recommended as the knockout region. The region contains 721bp coding sequence. Knock out the region will result in disruption of protein function.
- In this project we use CRISPR/Cas9 technology to modify *Kptn* gene. The brief process is as follows: gRNA was transcribed in vitro. Cas9 and gRNA were microinjected into the fertilized eggs of C57BL/6JGpt mice. Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- According to the existing MGI data, mice homozygous for a knock-out allele exhibit increased body weight, increased susceptibility to bacterial infection and abnormal homeostasis.
- The *Kptn* gene is located on the Chr7. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.
- This strategy is designed based on genetic information in existing databases. Due to the complexity of biological processes, all risk of the gene knockout on gene transcription, RNA splicing and protein translation cannot be predicted at the existing technology level.

# Gene information (NCBI)

## Kptn kaptin [Mus musculus (house mouse)]

Gene ID: 70394, updated on 13-Mar-2020

### Summary

<b>Official Symbol</b>	Kptn provided by <a href="#">MGI</a>
<b>Official Full Name</b>	kaptin provided by <a href="#">MGI</a>
<b>Primary source</b>	<a href="#">MGI:MGI:1890380</a>
<b>See related</b>	<a href="#">Ensembl:ENSMUSG00000006021</a>
<b>Gene type</b>	protein coding
<b>RefSeq status</b>	VALIDATED
<b>Organism</b>	<a href="#">Mus musculus</a>
<b>Lineage</b>	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
<b>Also known as</b>	2310042D10Rik, 2E4, C030013F01Rik
<b>Expression</b>	Ubiquitous expression in ovary adult (RPKM 13.4), subcutaneous fat pad adult (RPKM 11.6) and 28 other tissues <a href="#">See more</a>
<b>Orthologs</b>	<a href="#">human</a> <a href="#">all</a>

# Transcript information (Ensembl)

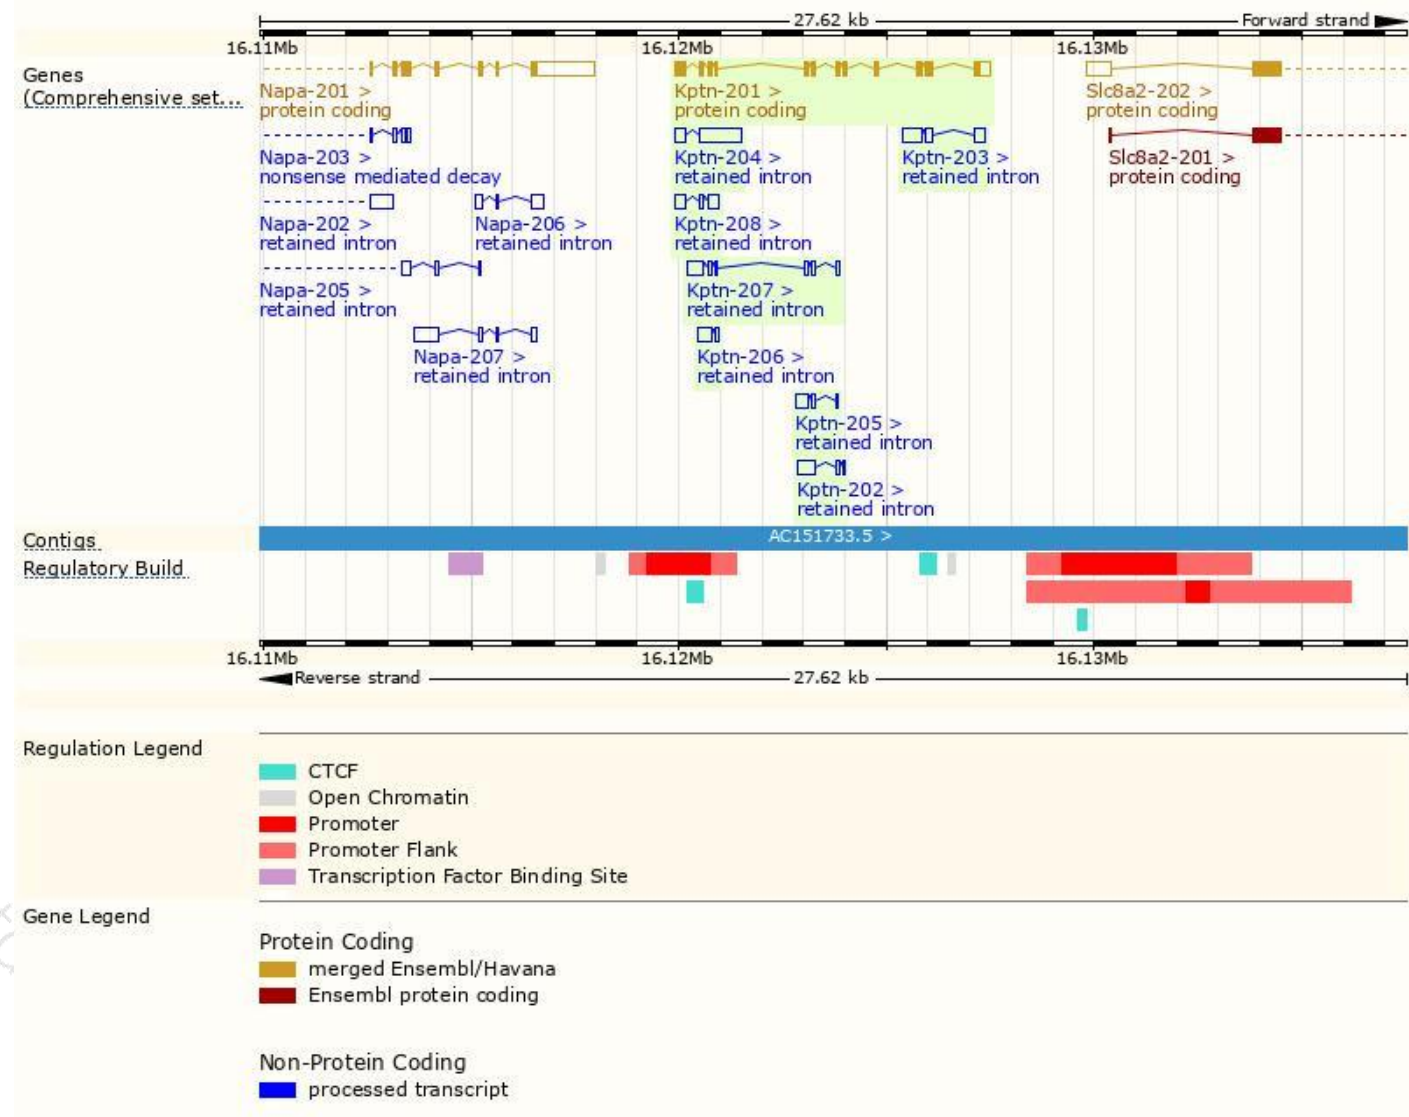

The gene has 8 transcripts,all transcripts are shown below:

Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Kptn-201	<a href="#">ENSMUST00000006178.4</a>	1630	<a href="#">430aa</a>	Protein coding	<a href="#">CCDS20844</a>	<a href="#">G3X8R1</a>	TSL:1 GENCODE basic APPRIS P1
Kptn-204	<a href="#">ENSMUST00000130170.1</a>	1322	No protein	Retained intron	-	-	TSL:1
Kptn-203	<a href="#">ENSMUST00000129080.1</a>	863	No protein	Retained intron	-	-	TSL:2
Kptn-207	<a href="#">ENSMUST00000149388.1</a>	723	No protein	Retained intron	-	-	TSL:5
Kptn-208	<a href="#">ENSMUST00000152044.1</a>	597	No protein	Retained intron	-	-	TSL:2
Kptn-202	<a href="#">ENSMUST00000127584.1</a>	554	No protein	Retained intron	-	-	TSL:2
Kptn-206	<a href="#">ENSMUST00000149255.1</a>	440	No protein	Retained intron	-	-	TSL:3
Kptn-205	<a href="#">ENSMUST00000141430.1</a>	426	No protein	Retained intron	-	-	TSL:3

The strategy is based on the design of *Kptn-201* transcript,the transcription is shown below:

# Genomic location distribution

# Protein domain

# Mouse phenotype description(MGI )

*Phenotypes affected by the gene are marked in blue. Data quoted from MGI database(<http://www.informatics.jax.org/>).*

According to the existing MGI data, mice homozygous for a knock-out allele exhibit increased body weight, increased susceptibility to bacterial infection and abnormal homeostasis.
